PREFACE

• An encyclopedia is a tool, and like all tools it must be designed with its function always in mind. Only in this way can it be really useful and satisfy the demands made of it. The first question that the editors of Collins National Encyclopedia had to ask themselves was—what is required of a new encyclopedia today?

First and foremost we believe that it should be comprehensive, and leave no field of useful knowledge unexplored. For biography this has meant selecting from the most interesting figures in the history of the world and reducing their lives to a general basic pattern, highlighting their achievements and works about them. The vital field of science is covered in the careers of scientists, with short entries on substances and processes as well as the developments in applied science that make up the history of technology. Religion, philosophy and art are, in the same way, covered in general entries and in biographies of important figures, carefully interrelated. World history, with its kings, battles and treaties, throwing long shadows into the political scene of today, has its place alongside the scientific assessments of mankind given by ethnography, sociology and economics. As the troubled political scene cannot be understood without history, it equally cannot be fully understood without geography, and we have included up-to-date articles on all the countries of the world with their most important cities and political divisions.

Politics and geography lead us to the second major requirement in a useful modern encyclopedia—impartiality. Never in the history of man, it seems, have accuracy and precision in the presentation of facts been more at a premium than now, when the mass media of communication disseminate facts and fallacies, problems and prejudices with equal enthusiasm. With this desperate world need in mind, the editors have tried at all times to report merely and to confine the expression of opinions and judgment to a minimum.

The crying need of our age is for facts. The changes that the last decade have made in the scope of what can be known have so stretched the limits of any one man's comprehension that he demands a guide he can trust. This we hope to provide, for we have kept rigidly to the rule of what we do not know we do not claim to know. We do not

claim to read the future, so there will be no inspired guesses about the 'next step for the United Nations' such as you may find in any newspaper. When the next step has been taken we shall record it.

Our greatest problem has been to know what to exclude, since we had only a few hundred pages in which to cover all the world of human knowledge and interest. The basic difficulty was deciding how much space to give to the noisy topical event, the up and coming movements, new ideas and new scientific possibilities which man may soon be exploring, and how much to the past, to the accumulated wisdom and knowledge of the centuries. There can never be any absolute criterion on which to judge, and the ultimate decision is always a personal one.

Unlike a computer, which might have been able to tell us which entries were likely to be most in demand by scanning the history of some previous reference book, the editors have kept the human element very much in mind. We have remembered that there are two main types of reader using our encyclopedia. One is the person in a hurry, seeking specific information, knowing exactly what he is looking for and wanting it in less time than it takes to put the question. He will find that the essential information is presented in concise, meaty entries, simple, uncluttered and utilitarian in style. The other is the more leisurely person who can easily be induced to read on about Bicycles after he has satisfied his curiosity about Bicarbonate of Soda and can be just as interested in the Windward Islands as in Wine. He asks to be informed pleasantly about a variety of things, and for his sake we have tried not to make the text unpalatable through over-compression.

Nor has the lighter side of life been forgotten, for a person's hobbies are as vital to his well-being as his work. There had to be space for football and pottery, for chess and photography alongside aviation, space exploration and the great scourges of mankind—wars, diseases and natural calamities.

This new encyclopedia has been compiled by the staff of Collins Reference Book Department, of whom Miss Patricia Bascom, B.A., L.G.S.M., deserves special mention. We are confident that if you use Collins National Encyclopedia as a daily companion it will not only serve your needs well but will remind you of the great stores of knowledge in the world and encourage you to make use of them.

AERIAL

Metallic conductor used for the transmission or reception of radio signals. A transmitting aerial consists of a wire, rod, or mast, supported above the ground and insulated from it. When an alt. current is caused to flow in the aerial, energy is radiated from it as an electromagnetic wave. A receiving aerial, placed in the path of this wave, absorbs a small amount of energy, which appears as an alt. current of the same frequency as that flowing in the transmitting aerial.

AERONAUTICS

The first accurately chronicled experiments in the theory of flight were conducted by Leonardo da Vinci, the Ital. artist and scientist, c. 1500. In 1783 Pilâtre de Rozier ascended from Paris in a balloon filled with hot air. Numerous experiments with spherical balloons filled with

either hot air or hydrogen followed; in 1785 two balloonists crossed the channel, and in 1852 successful flights were made by a navigable airship driven by a steam engine. Aeroplanes developed later, a model glider being constructed by Sir George Cayley in 1804 and the first powered model being made by John Stringfellow in 1848. See AVIATION.

AFGHANISTAN

Kingdom of Asia, bounded by Persia, the U.S.S.R., and Pakistan. It is a mountainous country, esp. in the N.E. where peaks of the Hindu Kush rise to over 24,000 ft. Two important Mt. passes, the Khyber and the Bolan, provide routes into Pakistan. The chief rivers are the Helmand, Kabul, Amu Darya and Hari Rud. The climate is dry, with great ranges of temp. In the valleys where the soil is fertile, wheat, barley, rice, millet and fruit are grown. Sheep are bred, and wool and skins are exported. Kabul is the cap. Admin. is by a king, assisted by 2 cabinets of mins. and 2 assemblies. During the 19th and early 20th cents. Brit. influence over the country was strong; in 1921 Afghanistan's indep. was recognised. Area: 250,000 sq.m. Pop. 13,800,000.

AFRICA

Continent surrounded by sea except in the N.E. where the Isthmus of Suez connects it with Asia. On the W. is the Atlantic Ocean, on the E. the Indian Ocean, on the N. the Medit., on the N.E. the Red Sea. Area is approx. 11,600,000 sq.m. The largest ls. off the coast is Madagascar. Features of the cont. are its unbroken coastline, its vast desert and its great rivers and lakes. The largest desert is the Sahara which divides the Medit. region from the rest of the cont. The Kalahari Desert lies in the S.W. The largest lakes are Victoria, Chad, Tanganyika, and Malawi. The principal

ivers are the Nile, Congo, Niger, Zambezi and Limpopo. Much of Africa is occupied by a great plateau with bordering mt. ranges, e.g. the Atlas Mts. in the N., and the Drakensberg in the S.E. Mt. Kilimanjaro is 19,565 ft. and Mt. Kenya 17,058 ft. Since Africa lies chiefly within the tropics, temps. are generally high except in highland areas. Africa is rich in mineral wealth. Notable are the rich gold fields of the Transvaal and the copper deposits in Rhodesia. Products include coffee, cocoa, rubber, cotton, etc. The majority of the inhabitants are Negroes, others belonging to the Bushmen and Hottentot races. They are divided into 4 language groups, Bantu, Semitic, Hamitic and Sudanic. Arabs have settled in the N. and E., Indians in the E., and Brit. and Dutch in the S. From recent research it has been proved that man has lived on the continent since lower Pleistocene times though recorded history begins with the gradual development of the N. African civilisations. Later, the entire N. littoral became part of the Rom. Empire but in the 7th cent. fell to the forces of Islam. Brit. and other seamen followed Portuguese explorers of the 15th cent. and trading ports were established all round the coast, the Cape of Good Hope being especially important. Since trade was only in slaves for Amer., ivory, gold, etc., until the late 18th and early 19th cents., very little was known of the interior. During this period of some 75 years, explorers such as Mungo Park, James Bruce, Livingstone, Burton, Speke, Grant and Stanley discovered the main physical features. During the half-cent. preceding World War I almost the entire Continent was partitioned between the Brit., Fr., Germans, Itals., Belgians and Portuguese. Now the period of domination by European powers is rapidly drawing to a close. At the end of World War II the only indep. states were Egypt, Libya, Ethiopia, S. Africa and Liberia. Pop. 283,000,000.

AFRIKA CORPS

AGRICULTURE

Science and practice of the cultivation of the soil. From the Iron Age to the 19th cent. there was little change in methods. In Eng. in the 17th cent. Jethro Tull secured a more thorough tilling of the soil and Robert Bakewell improved the breed of livestock. Root crops made it possible to keep cattle alive through the winter and another important change was an improved rotation of crops (q.v.). Agriculture may be divided into 3 great branches, (1) The production of cereals, rice, sugar, tea, coffee and other foodstuffs. (2) The rearing of livestock, including cattle for milk, and poultry. (3) The growing of fruit and vegetables (market gardening). Branches less easily classified include the growing of tobacco, the cultivation of hops, soya beans, the keeping of goats and bees. See FERTILISER; FOOD SUPPLIES.

AGRIMONY

Africa (1942), in the invasion of Sicily (1943), and of Normandy (1944), in an unsuccessful attempt to secure the road bridge across the Rhine at Arnhem (q.v.) (1944) and at the crossing of the Rhine, Mar. 1945. All Airborne Forces are volunteers.

AIRCRAFT

Generic name for any airship, aeroplane or other flying machine. In Brit. as in other countries all aircraft must be registered, after being passed by the Min. of Aviation as airworthy. See AVIATION.

AIRCRAFT CARRIER

Warship designed to carry and service aircraft, which are housed in hangars in the ship and take off and land on a specially constructed flight deck. The first in the Brit. Navy were converted ships, e.g. *Argus* and the large light-cruisers *Furious*, *Glorious*, *Courageous*, which were still in commission on the outbreak of World War II. They served to give cover for convoy and land operations and played a vital part in major fleet actions, esp. the battle of Midway between the Amer. and Jap. fleets. During the War, Brit. completed *Illustrious*, *Victorious*, *Formidable*, *Indomitable*, *Implacable* and *Indefatigable* displacing 23,000-30,000 t. and accommodating c. 70 aircraft, and in 1951 the new *Eagle* was commissioned. Of 36,800 t. she carried 2 squadrons of jet aircraft. The world's largest carrier and ship is the U.S.S. *Enterprise*, with a full-load displacement of 85,800 tons, and a length of 1,102 ft. She is powered by 4 atomic reactors and can accommodate c. 100 aircraft. Recent Brit. inventions are the angled flight deck, which enables the deck to be used for parking aircraft and for taking off and landing at the same time, steam catapult and the mirror sight. See FLEET AIR ARM.

AIRE

Aire flows is called Airedale, which is the name of Brit. terrier dog. A large and strongly-built animal, it is a cross between the Otterhound and the Irish or Welsh terrier. It has long legs and a hard, close coat.

AIRSHIP

Form of aircraft that depends for its support upon gas that is lighter than air. The first airships were balloons from which one or more cars for engines, fuel and crew were suspended. These were known as *non-rigid*. The Brit. Govt. built several. The first *rigid* airships were the German Zeppelins. They were giant cigar-shaped vessels with a rigid framework containing many balloons of gas. After the war several nations took up the building of airships. The Brit. Govt. constructed R33 and R34, and later R100 and R101, but the disaster to R101 in 1930 put a stop to further developments.

AITKEN, Robert Grant

(1864-1951) Amer. astronomer. His fame rests chiefly on his work on double stars, which he made his special study, and of which he himself discovered over 3,000. His book, *The Binary Stars* (1918), tabulates the results of 100,979 observations of stars.

AIX-LA-CHAPELLE

AMERICAN INDIANS

Name given to the early inhabitants of the Amer. Cont. The word 'Indians' was used by Columbus, c. 1493. Known also as the red-man, or red-skin, the race is distinguished by

its straight black hair, copper-coloured skin, aquiline nose, prominent jaw and pointed skull. The Indians are tall and strong. It is said that there are 1,500 tribes of Indians. It is possible to make certain generalisations about these people as they were in the time of Columbus. They worshipped spirits, who, they believed, watched over the tribe and its possessions. They had their own language. They knew something of weaving and spinning. They were very fond of music and dancing, and their songs have been collected. They used paint to adorn their bodies. Their food was obtained mainly by hunting. They knew something of agriculture, as they grew maize, and were continually at war with neighbouring tribes. The arrival of the Spanish in S. Amer., and the Brit. and Fr. in N. Amer. was followed by wars between the white men and the red men. The Spaniards introduced the horse to the Indians. In the 18th and 19th cents. many Indians were occupied in collecting furs, but in N. Amer. esp. the land over which they roamed was gradually occupied by the whites and the area left to them was steadily reduced. Today the remnants of the race in the U.S.A. and Canada, live in reservations. In Mexico, C. and S. Amer. they roam about much as of old.

(c. 1033-1109) Eng. saint and prelate. Apptd. Archbp. of Canterbury 1093, but was soon at variance with William II. Refusal to do homage to the new king, Henry I, led to a 2nd exile. A compromise 1105, was made between the claims of ch. and state.

ANSON, Lord

(1697-1762) Eng. sailor. In 1740 he was given command of a squadron, Eng. being then at war with Spain. All his ships save 1 were lost, but in this he returned home with treasure worth £500,000. In 1747 he defeated the Fr. fleet off Cape Finisterre. As First Lord of the Admiralty (1751-62) he organised the Marines.

ANT

(or Emmet) Insect allied to bees and wasps. Belonging to the order Hymenoptera, there are c. 2,000 varieties. The White Ant, or Termite is not related to the ordinary ant. There are male, female and neuter ants and a queen. The neuters are sterile females who do the work. Only the males and females have wings. They mate while flying; soon afterwards the males die and the females, having shed their wings, lay eggs which are tended by the neuters. In a few days the eggs become pupae and in a few more, perfect insects. The homes of the ants are passages in the ground, or in the trunks of trees. They have stings which inject formic acid.

ANT LION

Larva of a neuropterous insect *Myrmecoleon formicarius*. It is found in Europe, but not in Brit. It forms in the sand a small pit, into which ants and other wingless insects fall, to be seized by the ant lion lying at the bottom.

ANTANANARIVO See TANANARIVE.

ANTARCTIC, The

S. Polar cont. and the icebound sea surrounding it. Except for the outlying S. Georgia and S. Sandwich groups it lies within 60° latitude. In 1928 'by virtue of discovery', various parts of the cont. were included within the Brit. Empire. These included parts of Coats Ld., Enderby, Kemp, Queen Mary, Wilkes, King George V and Oates Lands. Now the cont. is divided into 6 sectors: the Brit. Antarctic Territory; the Norwegian A. Territory; the Austral. A. Territory; Adèle Land (Fr.); Ross Dependency (New Zealand) and the U.S. region of James Ellsworth and Marie Byrd Land. The A. Circle is the line of latitude drawn at 66½° S. Antarctic Exploration. The first man knowingly to cross the Antarctic circle was James Cook, 1773. In 1821 Bellingshausen first discovered land within the circle, at Peter I Is. and other expeditions, led by Weddell, Biscoe, Balleny, Ross and others followed. Ross, in

1839, made extensive discoveries including the volcanoes Erebus and Terror. In 1901 the *Discovery* expedition under R. F. Scott, found and named King Edward VII Land, and explored Victoria Land. Another expedition, led by W. S. Bruce, discovered Coats Land. In 1908, E. H. Shackleton led an expedition that got to within 100 m. of the pole. The first to reach the pole was Roald Amundsen, who, with a party on skis, arrived there on Dec. 16, 1911. A month later, using sledges, Scott, with 4 companions, reached it, but met his d. on the return journey. In 1929 an Amer. expedition was undertaken, in which Richard Byrd flew to the Pole from the Ross Ice Barrier. In 1955 an advance party from the U.K. led by Dr. Vivian Fuchs established Shackleton Base, in Vahsel Bay. Dr. Fuchs returned to the U.K. to complete the plans for the main expedition which left Britain in Nov. 1956, on the *Magda Dan*. This first journey of 2,200 m. across the A. Cont. began on 24th November, 1957, and ended with the arrival of Dr. Fuchs and his party at Scott Base, on the Ross Sea, on 2nd March, 1958. The New Zealand support party operated from Scott Base, and was led by Sir Edmund Hillary.

ANTEATER

Mammal feeding on termites and ants. The name chiefly indicates 3 quadrupeds inhabiting C. and S. Amer. The Great A. (*Myrmecophaga*), with a tubular muzzle and long viscid tongue, is a ground dweller measuring 7 ft. The

Cape Anteater, or Aardvark

Lesser (*Tamandua*) and the Pigmy (*Cycloturus*) are arboreal. Australia possesses the Banded A. (*Myrmecobius*), one of the pouchless marsupials, and the Spiny A. (*Echidna*) one of the 2 surviving oviparous mammals (q.v.). Others which feed mainly on termites are the Pangolins (*Manis*) of Africa, India, China, Borneo, etc., and the Aardvarks (q.v.), the Cape A.

ANTELOPE

Generalised name for hollow-horned ruminants. Asia possesses the Indian A. (Sasin), the Nilgai and 4-horned Chousingha, the Tartary Saiga, the Tibetan Chiru, and many gazelles. Most of the 150 species are confined to Africa, Arabia and Syria. Besides gazelles they include the Eland, Kudu, Bushbuck, Oryx, Addax, Springbok, Duiker, Hartbeest and Gnu.

ANTENATAL CLINIC

Clinic to provide medical advice and supervision for the expectant mother so as to ensure as far as possible her health during pregnancy and the safe delivery of her child. The first such clinic in Britain was establd. at the Royal Hospital, Edinburgh, in 1902. The Maternity and Child Welfare Act of 1919 made such clinics the responsibility of the local authorities, and they continue to function under the aegis of the Nat. Health Service.

ANTHRACENE

[s-ēn] Colourless crystals which belong to the group of aromatic hydrocarbons, have a blue fluorescence, and are used for making dye stuffs.

ANTHRACITE

Name given to that class of coal which contains the highest percentages of fixed carbon, ranging from 90 % to 95 %. It is hard and dense

and of brilliant lustre. It burns smokelessly with intense heat and barely luminous flame.

ANTHRAX

Commonly called wool-sorters' disease. Acute infectious fever caused by *Bacillus Anthracis*. Disease common in Fr. and Russia but now rare in Brit. following legislation. In man it is characterised by large ulcer, usually situated on back of neck, or a type of pneumonia.

ANTHROPOID

Variety of ape. Of all the lower animals they are the most like men. There are 4 types: Orangs, Gibbons, Gorillas and Chimpanzees.

ANTHROPOLOGY

Science of man. Physical anthropology treats of the natural history of man. It seeks aid from palaeontology, which studies the fossil bones of early man and his organic contemporaries. Cultural anthropology, called by Herbert Spencer sociology, unfolds the story of civilisation. Ethnology is the study of racial origins and distribution.

ANTHROPOMORPHISM

Ascription to the deity of human attributes.

ANTHROPOSOPHY

[pos'-of-i] System of religion, philosophy, science and art, founded by Rudolf Steiner (1861-1925). B. Austria, he had spiritual visions in childhood, and devoted much time to the study of science, educ., medicine, art, and social problems. An important item in anthroposophical teaching is the doctrine of reincarnation.

ANTIBES

[a(ng)-tēb] Seaport and winter resort on the Fr. Riviera, dept. Alpes-Maritimes. Pop. 15,000.

ANTIBIOTIC

[bi-o'-tik] The property of living organisms to produce in self-defence substances which retard the growth of, or destroy, unfriendly organisms. In 1929 Alexander Fleming discovered that the mould penicillin produced a substance destructive to staphylococcal germs. Other antibiotics are streptomycin, which is beneficial in tuberculosis; chloramphenicol, the first of the new antibiotics to be made synthetically. Highly satisfactory results have been obtained in the treatment of the enteric fevers, typhoid and paratyphoid, atypical virus pneumonia, Q-fever, and virus infections such as undulant fever, and psittacosis. The fact that there is now an effective treatment for typhus and similar fevers is a medical advance of prime importance. Aureomycin is specific for every common form of pneumonia. It is also of value in the treatment of venereal diseases. See PENICILLIN; STREPTOMYCIN.

ANTICYCLONE

Atmos. phenomenon. An area of high barometric pressure is caused by descending air, the pressure decreasing towards the edges of the area. The descending air becomes dry and warm and so transmits radiation freely. The centre of the system is calm, but from it winds blow out, in the N. hemisphere in a clockwise direction and in the S. in an anti-clockwise direction.

ANTIGUA

[tē'-gā] Largest of the Leeward Is. lying N. of Guadeloupe. Sugar and molasses are the chief products. St. Johns is the cap. Barbuda and Redondo are dependencies. To be indep. state in assoc. with Brit. Pop. 62,000.

ANTILLES

Name collectively applied to the W. Indian Is. S. of the Bahamas. The Greater A. comprise Cuba, Jamaica, Haiti, Puerto Rico and some smaller Is. The Lesser A. include the Leeward and Windward groups, Trinidad, and the Dutch Is. of Curaçao, Aruba and Bonave.

18 • ANTIMONY

ANTIMONY

Metallic element, sym. Sb., at. wt. 121.76. It is crystalline, brittle, lustrous, bluish-white, and melts at 630.5° C. The unrefined commercial metal called regulus is mainly derived from its sulphide stibnite, which is mined in China, Australia, Borneo, Fr. and Mexico. It is a constituent of alloys for sharp castings such as type metal, and anti-friction metals.

ANTIOCH

Town of Turkey, on the Orontes 60 m. W. of Aleppo. Founded c. 300 a.c. and named after Antiochus, King of Syria. It was a centre of the early Christians. The modern name is Antakya. Pop. 50,908.

ANTIPODES

Term denoting places diametrically opposite to each other on the earth's surface. A line joining them passes through the earth's centre.

ANTIRRHINUM

[i'-num] Genus of many-coloured flowering plants called snapdragon.

ANTI-SEMITISM

Opposition to the Jewish race. In its modern form the movement became conspicuous in Europe during the 19th cent. and was the cause of many brutal outrages in Russia and Hungary. The Dreyfus case is an illustration of Anti-Semitism in Fr. Under Hitler's rule in Germany the movement culminated in a deliberate policy of race-massacre in the concentration camps, and 6,000,000 Jews were put to d. See Jews.

ANTISEPTIC

Substance which inhibits the growth of micro-organism. Their use in the antiseptic age of surgery was popularised by Joseph Lister (1827-1912). Largely superseded by asepsis. See DISINFECTANT.

ANTOFAGASTA

Seaport of Chile, c. 750 m. N. of Valparaiso. The chief industries are concerned with the silver and nitrates mined nearby. Pop. 214,090.

ANTONELLO DA MESSINA

(c. 1430-1479) Ital. painter who studied painting in oils in Bruges and is said to have taken the new medium to Italy.

ANTONINUS PIUS, Titus Aurelius Fulvus

(A.D. 86-161). Rom. Emperor of Gallic family. He was adopted by the Emperor Hadrian and succeeded him in 138. He brought peace to the Empire. The wall built between the Forth and the Clyde bears his name.

ANTRIM

Maritime county of N. Ireland, with a long coastline on the N. and E. The rivers Lagan and Bann, with Lough Neagh, form much of the S. and W. boundaries. Along the coast are the Antrim Mts. but inland the country is fertile, with some bogland. Flax and potatoes are grown. Antrim is the county town; others are Belfast, Carrickfergus, Larne and Ballymena. The county returns 2 members to Parl. Pop. (excluding Belfast) 278,600. Antrim. Market and county town of Co. A. on L. Neagh, 15 m. N.W. of Belfast. Pop. 1,700.

ANTWERP

City and chief seaport of Belgium, cap. of A. prov. on the right bank of the Scheldt, 27 m. N.E. of Brussels, and c. 50 from the N. Sea. A. is one of the great trading ports of Europe. Industries include shipbuilding and repairing, oil and sugar refining, and the manufacture of cloth, linen and textiles. In the 15th cent. A. replaced Bruges as the chief port of the Netherlands, and in the 16th cent. it was the greatest port in Europe. Its decline was caused by the Spanish invasion and its capture in 1585, and in 1648 the Scheldt was closed by the Treaty of Westphalia. After 1830, when Belgium be-

came indep. it became once more a scene of great trading activity. It fell to the Germans during both World Wars. Pop. 647,060.

ANZIO

[an-'tsi-ō] Seaport in Lazio, Italy on the Tyrrhenian coast 30 m. South of Rome. During World War II, 40,000 Brit. and Amer. troops landed on a beach between Anzio and Nettuno, S.W. of Rome.

AORTA

Main artery of body. Beginning at left ventricle it slopes upwards to neck (*ascending Aorta*) and backwards to the spinal column (*arch of aorta*) where it becomes the *thoracic aorta*. Lies alongside spine and passes through diaphragm to become *abdominal aorta*. At lower end of back bone it divides into the *iliac arteries*, right and left. Other branches supply nearly all structures in chest and abdomen.

APACHE

[pash'-l] Group of N. Amer. Indian tribes, who formerly ranged from Texas and Arizona S. to the Mexican state of Durango. They were at constant feud with the whites until 1886. The name was applied to hoodlums of alien origin in Paris early in the 20th cent.

• **APARTHEID** See SOUTH AFRICA, Apartheid.

APATITE

Mineral in which anhydrous calcium phosphate is assoc. with a variable proportion of the chloride or fluoride of the same metal. It appears as minute lustrous needles in igneous rocks or as hexagonal prisms in crystalline limestones.

APE

Word applied to fne anthropoids, i.e. the Gorilla, Chimpanzee, Orang-utan, etc. See ANTHROPOID; MONKEY.

APENNINES

Chain of mts. forming the backbone of the Ital peninsula. The highest peak is Mt. Corno, 9,583 ft.

APHIS

Insects known as plant lice or green fly, very common in Brit. They feed on plants and leave an excretion called honeydew, eaten by ants, but injurious to vegetation. They reproduce sexually once a year and in the spring the eggs hatch out into females. The eggs of this and of succeeding generations of females develop without fertilisation. The males are only developed in the autumn.

APHRODITE

[afrod-i-ti] Gk. goddess of love (Venus). By Ares she was the mother of Eros. Her worship, marked by excesses, was very widespread in the Gk. cities.

APOCALYPSE

[a-pok'-a-lips] Form of religious writing. Emerged from the Jewish Hellenistic period. Classical O.T. example is Book of Daniel. The Book of Revelation (N.T.) is frequently referred to specifically as the Apocalypse.

APOCRYPHA

[a-pok'-rif-a] Religious writings of Jewish origin not found in the Heb. canon of the O.T. There are 14 of these apocryphal books: 1 *Esdras*, 2 *Esdras*, *Tobit*, *Judith*, *The Additions to Esther*, *The Wisdom of Solomon*, *Ecclesiasticus*, *Baruch*, *The Song of the Three Holy Children*, *The History of Susanna*, *Bel and the Dragon*, *The Prayer of Manasses*, 1 *Maccabees*, 2 *Maccabees*. N.T. apocrypha include *The Epistle of Barnabas*, *The Gospel of Peter* and *The Shepherd of Hermas*.

APOLLO

Gk. god, regarded later as the god of healing and the father of Aesculapius. He was also the god of song and music.

APOLOGETICS

Branch of theology which concerns itself with the grounds and defence of the Christian faith. It animated the work of Justin Martyr, Origen, Augustine, Anselm, Aquinas and Abélard, and was systematised in the 18th cent. by Butler and Paley. Modern apologetics emphasises the moral ideal.

APOPLEXY

Commonly called stroke or seizure, occurs after a haemorrhage into the brain or blockage of a cerebral vessel. Characterised by redness of the face, laboured breathing, loss of consciousness with unequal size and shape of pupils.

APOSTACY

Term generally employed to designate reproachfully the abandonment of a faith. In R.C. eccles. law it covers the renunciation of monastic vows, or of the clerical profession.

APOSTLE

Term, denoting messenger, adopted by Jesus Christ to designate the 12 men sent forth to preach the gospel (Luke, 6). The names of the 12 are: Simon Peter, Andrew, James, John, Philip, Bartholomew, Thomas, Matthew, James the Less, Thaddaeus, Simon the Canaanite and Judas Iscariot. After the betrayal by Judas Iscariot his place was allocated to Matthias. The title was claimed by St. Paul, the apostle to the Gentiles. **Apostle's Creed.** Confession of the Christian faith wrongly ascribed to the Apostles. **Apostolic Succession.** In Christianity, the doctrine that the episcopal power invested in the apostles by Christ passes in unbroken succession from them to the bishops of today. It is on this doctrine that the validity of the Sacraments rests, and it is held by the R.C. Ch. that, because of the schism caused by the Reformation, the consecration of bishops in the Ch. of England is not valid. Protestant nonconformist churches believe that the Apostolic faith is preserved in the Scriptures alone, and that belief in the Apostolic Succession is not essential to the discharge of episcopal functions and the transmission of the promised divine grace.

APOTHECARY

Person who mixes drugs. In Eng. the soc. of Apothecaries holds exams. and its degree of L.S.A. enables the holder to practise. Apothecaries wt. See TABLES, p. 453.

APPALACHIANS

Mt. system of N. Amer. extending for over 1,500 m. in the E. from Maine to Alabama.

APPEAL. Court of

Court of law in which the decisions of the lower courts can be reviewed, and, if necessary, reversed. In Eng., appeals from the county courts go to the Court of Appeal. Appeals from this court go to the House of Lords, which is the supreme court of appeal. In Scot., the inner house of the Court of Session hears appeals from the outer house; and from there appeals can be taken to the House of Lords. For criminal cases there is a Court of Criminal appeal establd. in Eng. 1907, and in Scot. 1926.

APPENDICITIS

Disease of inflammatory character affecting vermiform appendix. It is usually acute in onset with pain commencing in region of umbilicus but eventually settling in right side of abdomen, with rise in temp. and vomiting.

APPLE

Malus pumila. Tree or bush bearing a popular fruit, very widely grown in Brit. Some well-known varieties are Blenheim, Cox's Orange Pippin (dessert), Bramley Seedling, Newton Wonder (cooking). Apples of a different kind are grown for making cider. Enormous quantities are grown in Calif., Canada, Australia, New Zealand and elsewhere.

APPLEBY

Borough and county town of Westmorland, on the Eden, 30 m. S.E. of Carlisle. Pop. 1,751.

APPLETON, Sir Edward Victor

K.C.B., F.R.S. (1892-1965) Brit. physicist. Educ. Camb. He discovered one of the conducting layers in the upper atmosphere—now called the Appleton layer—which are responsible for long-distance radio transmission. Nobel Prize for Physics in 1947. Princ. of Edinburgh Univ., 1949-65.

APPRENTICE

Person bound for a term of years to a master who instructs him in his trade. The system originated in Eng. in the 14th cent. As the apprentice is usually a minor the articles are signed on his behalf by his parent or guardian.

APPROVED SCHOOL

In Gt. Brit., in terms of the Children and Young Persons Act, 1933, any child or young person who has committed a crime, is refractory, or in need of care and protection, may be sent by a court of law to a school approved by the Home Sec.

APRICOT

Fruit tree. A native of Asia, introduced into Eng. in the 17th cent. It is cultivated in Fr and Calif.

**APRERYX** See KIWI.**APULEIUS, Lucius**

[a-pew-lē-us] Writer of African birth who lived in the 2nd cent. and wrote the *Golden Ass* or *Metamorphoses*, one of the few surviving examples of the Lat. novel.

AQUAMARINE

The finest variety of beryls of a sea-green or blue colour.

AQUEDUCT

Artificial channel v. to convey water above the ground. The Romans were great builders of aqueducts usually of stone, the water being carried in covered chambers lined with cement. In Eng. an aqueduct carries the Bridgewater Canal over the Manchester Ship Canal. In the U.S.A. the Catskill, 126 m. long, supplies New York with water. The longest is that running from Perth, W. Australia, to Kalgoorlie, 350 m.

AQUILEGIA

Genus of flowering plants of the family Ranunculaceae. The best-known is the columbine.

AQUINAS, Saint Thomas

(c. 1225-74) Ital. philosopher, founder of the system which became the official philosophy of the Catholic Ch.; entered Dominican order 1243. Commenced studies with Albertus Magnus, 1245. Avowedly Aristotelian in character, his philosophy teaches that while reason and faith differ as to the procedure, they cannot deny each other's findings. His greatest work is *Summa Theologica* (1267-73). He was canonised in 1323. His feast is on Mar. 7.

AQUITAINE

District of S.W. Fr. between the Garonne and the Pyrenees. Eleanor, the daughter of one of the ruling dukes, mar. Henry II of Eng.

ARAB

Semitic race, including all the Semites except the Jews, found in many parts of Asia and

20 • ARAB LEAGUE

Africa. They were settled in Arabia at the time of Mahomet, but his teaching induced them to invade Africa and later Spain, founding an empire in India and in Asia. Today they number c. 45,000,000, practically all Mohammedans. Math. and philosophy are prominent in their lit. and the Arab schools of learning at Baghdad and elsewhere have contributed much to human knowledge. Arabic, S. Semitic language known in Arabia from early times (Himyaritic and Thamudic inscriptions) and diffused throughout Middle E., and N. and W. Africa in 7th-8th cent. by Arab conquest and Islamic conversions. Arabic script is used throughout the Moslem world.

ARAB LEAGUE

Pan-Arab league of sovereign states founded in 1944 following the Alexandria Conference. The covenant was signed in Cairo by Egypt, Iraq, Saudi Arabia, Syria, Lebanon, Jordan, and Yemen. Libya joined (1953); the Sudan (1956); Tunisia and Morocco (1958); Kuwait (1961); Algeria (1962). The League can mediate between any of the League states or a League state and a country outside the League. Since the founding of the U.A.R. its cohesion has lessened.

ARABI PASHA

(1839-1911) Egyptian nationalist leader. In 1882 he became Min. for War, and led a nationalist revolt against foreign influence and control.

ARABIA

Country of S.W. Asia, a peninsula bounded by the Persian Gulf, the Arabian Sea and the Red Sea. It consists of a plateau sloping from the S.W. towards the Euphrates valley in the N.E. In the S. running parallel to the Red Sea coast, and in the extreme E. on the Gulf of Oman, are mts. rising to over 7,000 ft. The interior is mainly sandy desert. The climate is hot and dry; rainfall is scanty. Many of the inhabitants are nomadic Bedouin Arabs. Since the 7th cent. Arabia has become the centre of Mohammedanism, and Mecca and Medina are visited by many pilgrims. Conquered by the Turks in the 16th cent. Arabia remained under Turkish rule until 1916, when the Sherif of Mecca, aided by Col. T. E. Lawrence, threw off Turkish authority. The Kingdom of Saudi Arabia (q.v.) was formed in 1926 by the union of Hejaz and Nejd (qq.v.). Other states are the Sheikhdom of Kuwait, the Sultanate of Muscat and Oman on the E. coast, the Yemen, Aden and the states of Bahrain, Qatar and Trucial Oman. Area: c. 1,200,000 sq.m. Pop. c. 10,000,000. See SAUDI ARABIA, SOUTH ARABIA, YEMEN, ETC.

ARACHNIDA

[-né-da] Class of arthropods. It includes spiders, scorpions and mites. They are chiefly carnivorous and have usually 6 pairs of limbs. They have no antennae; simple eyes vary in number from 2 to 12, and the head and thorax are fused together. See SPIDER.

ARAGON

Former kingdom of Spain, lying S. of the Pyrenees. It arose in the 11th cent. and was extended to include the Balearic Is., Naples, Sicily and Sardinia. In 1467 Aragon united with Castile.

ARAL, Sea of

Lake of Asia, in the U.S.S.R. c. 80 m. E. of the Caspian Sea. It covers some 26,035 sq.m.

ARAMAIC

Semitic language, with ancient Samaritan, Mandaeen, Chaldean, Syriac as its varieties. It replaced Heb. as the language of the Jewish people 1st cent. B.C. and the Targums and Talmud are written in it. Aramaic phrases are quoted in the Gospels. Syriac is still spoken near Damascus. There is a 5th cent. B.C. Samaritan version of the Pentateuch.

ARAN

Group of Is. off the W. coast of Elre. Fishing is the main industry. Area 18 sq.m.

ARARAT

Mt. mass on the borders of Armenia (U.S.S.R.) and Turkey, an extinct volcano with 2 peaks, 16,945 ft. high. It is said to have been the resting place of the Ark after the flood.

ARBITRATION

Method of deciding disputes without resort to law, strikes, lock-outs or war. There are 3 kinds of arbitration: legal, industrial and international. Industrial arbitration is used in settling disputes between employer and employee. In Brit. there is an industrial court in the Min. of Labour. Internat. arbitration has been used many times. An internat. court was establd. at The Hague in 1899.

ARBOR VITAE

[vê-ti] Evergreen coniferous tree of 2 main species, the Amer. and the Chinese.

ARBUTUS

Evergreen tree with white or reddish flowers in clustered sprays.

ARCADIA

Mt. region in S. Greece. Its inhabitants were regarded as living a simple, rural life.

ARCHAEOLOGY

Study of the remains of the past. Sir Henry Layard examined the ruins of Nineveh and Babylon in the mid 19th cent. Unscientific explorations were done at Troy by T. Schliemann. Sir W. Flinders Petrie introduced more scientific methods in Egypt and Gen. Pitt Rivers in S. Eng. Sir Arthur Evans excavated in Crete and in 1922 Howard Carter opened the tomb of Tut-an-kh-Amen. In Brit. evidence of occupation prior to the Rom. occupation has been revealed; digs in London and other Rom. cities have revealed much of Rom. life and at Sutton Hoo of the A.-S. invaders. Since World War II air photography has been used to identify and map sites. Their excavation has developed into a highly scientific process.

ARCHANGEL

[ark'-j] Russian seaport and chief city of A. Region in the R.S.F.S.R. at the mouth of the Dvina, on the White Sea. The harbour is ice-bound in winter. Pop. 286,000.

ARCHBISHOP

High official in the Christian ch. The title first appeared in the 6th cent. In the C. of E. there are 2 archbishops, Canterbury ('Primate of All Eng.') and York ('Primate of Eng.').

ARCHDEACON

Official in the C. of E. Originally chief of the deacons attached to a cath. In time the archdeacons became almost indep. of the bishops, their duties being concerned with the financial and business side, but they are apptd. by the bishop.

ARCHER

(Toxotes) Small fish, found round the coasts of the E. Indies and Australia, so called because it can squirt water at its insect prey.

ARCHERY

The art of using the bow and arrow, formerly used in hunting and warfare, but today solely as a pastime. Archery was practised by the Egyptians, Persians, Gks., Romans, Arabs and Turks. Archery was the deciding factor in the battles of Hastings, Crécy and Agincourt. Late in the 18th cent. archery was revived in Eng. as a sport. In 1781 the Royal Topophilite Soc. was founded. The pastime is now controlled by the Grand Nat. Archery Soc. founded 1861. In the N. of Eng. shooting for the Scorton Arrow has been going on with but few breaks since 1673. The Royal Company of Archers is a body of Scots noblemen and gentlemen founded 1676. It is the sovereign's bodyguard for Scot.

ARCHIMEDES

[-dēz] (c. 287-212 B.C.) Gk. mathematician. B. at Syracuse. He discovered the use of the lever and invented the Archimedean screw. He estab. the principle that a body plunged in a fluid loses as much of its wt. as is equal to the wt. of the displaced fluid.

ARCHITECTURE

Art of designing and constructing buildings. Civil architecture is concerned with the building of structures of ordinary utility; eccles. deals with chs., and naval and milit. with the construction of ships and fortifications respectively. The beginnings of the art are seen in the primitive wattle huts of lake dwellings. The early flat roofs with horizontal beams gave place to the use of the arch which from a rounded form in time became the pointed arch of Gothic architecture. Classical archit. reached its peak in Greece. The classical tradition, in which the various columnar types fall into 5 'classical orders' i.e. Doric, Ionic, Corinthian, Tuscan and Composite each having its own rules of proportion, was formulated by Ital. architectural writers in the 16th cent. In earlier times the Greeks and Romans adhered to no set of rules and, except during the classical revival following the Renaissance, the same flexibility applies to most buildings which are modelled upon classical design. 20th cent. developments in building techniques have produced a remarkable freedom of shape as shown in the designs of Le Corbusier and others. **Architect.** Person who plans buildings and supervises their erection. Architects in Brit. must be registered before they can practise. The registration is controlled by the Royal Institute of Brit. Architects which holds exams.

ARCOT

City of Madras state, India, 65 m. S.W. of Madras, on the Palar. In 1751 the fort of Arcot was besieged by the Fr. and Clive beat off a series of attacks.

ARCTIC, The

Region surrounding the N. Pole, comprising for the most part the Arctic Ocean, which includes the Barents, White, and Kara Seas. It is connected by Davis Strait and other openings with the Atlantic, and by Bering Strait with the Pacific. The area of the Arctic ocean is regarded as approx. 5,440,000 sq.m. The Arctic Circle is the line of latitude 66½° N. Arctic Exploration. This began when sailors in the 15th cent. started on the search for a N.E. and a N.W. passage to the Pacific, and the earliest discoveries of land were made by Froisher, Hudson, Davis, Baffin and others. Early in the 19th cent. the Brit. Govt. offered a prize for a further advance. Ross, Parry and others rediscovered the lands found by earlier navigators, and discovered others. In 1845, Sir John Franklin went out with the *Erebus* and *Terror* but never returned. The existence of the N.W. passage to the Pacific was proved in 1878-9. Nordenskiöld sailed through the N.E. passage. Exploration in the 20th cent. corrected the prevailing idea about the size and shape of Green-

land. In the 19th cent. explorers had approached nearer the Pole, e.g. the *Amer.* Greely and Lockwood, in 1881-4 when 83° 24' was reached. In 1893 Nansen left the *Fram* and made a dash for the pole, but failed. It was eventually reached on April 6, 1909, by Robert E. Peary. In 1926 Roald Amundsen flew over the pole, followed later by the *Amer.* Richard Byrd.

ARDENNES

ARMY

An organisation of armed men. In early times the entire male pop. became the army in time of war. The modern notion of an army began after the conquests of Alexander the Great, and in Rome a standing army was instituted under the Emperors. In the feudal era armed service was one of the ties of allegiance. From the end of the M.A. to the 18th cent. most wars were fought by mercenary armies, and the concept of 'The Nation at Arms', forerunner of total war, first appeared in the armies that fought under Lafayette to defend the new Fr. Repub. Thereafter the 2 conceptions were united, a standing army forming the nucleus, in most countries, of conscripted forces. The tendency now is to internationalise armed forces under a unified command. The mechanisation of armies has been the main feature since 1918. The **Brit. Regular Army** is now

constituted as follows: (1) **Cavalry**: Mounted squadrons are used for ceremonial duties only. The Dragoons, Hussars and Lancers are now mechanised and, with the Royal Tank Regt. they form (2) **The Royal Armoured Corps**. (3) **Artillery**: *The Royal Regt. of Artillery* comprises Field, Coast Defence and Anti-Aircraft branches, the King's Troop, and the Royal Horse and Royal Malta Artillery. (4) **Engineers**: *The Corps of Royal Engineers* comprises Field Engineers, those who work on Lines of Communication and Transport and Services such as the Army's Post Offices, Military Survey, including map-making, etc. (5) **Signals**: *The Royal Corps of Signals* provides communications for every branch of the Army. (6) **Infantry**: (a) *Brigade of Guards* comprising Grenadier, Coldstream, Scots, Irish, Welsh. (b) *Infantry of the Line* (c) *Glider Pilot and Parachute Corps*, (d) *Brigade of Gurkhas*. (7) **Services**: The main corps are: (a) *Royal Army Service Corps*, responsible for the transport of food, fuel, etc. (b) *Royal Army Medical Corps* responsible for the health of the Army and for the medical field service in time of war, (c) *Royal Army Ordnance Corps* provides the Army with its stores and equipment. (d) *Royal Electrical and Mechanical Engineers* service electrical and mechanical equipment including armaments. Other corps provide auxiliary services, e.g. *Corps of Military Police*, *Royal Army Pay Corps*, *Army Catering Corps*, *Royal Army Chaplains' Dept.*, *Royal Army Education Corps* and the *Intelligence Corps*. On February 1, 1949, 2 women's corps were formed, viz.: *Queen Alexandra's Royal Army Nursing Corps* and the *Women's Royal Army Corps*. **Army Council**, body responsible for the control of the Brit. Army. The Pres. is the Sec. of State for War and there are 5 other members.

State in the extreme E. of India bounded by the N.E. Frontier Province, Burma, Pakistan and Bhutan. The region consists of 2 valleys. The soil is fertile, producing tea and rice. Shillong is the cap. The people are mainly Hindus and Moslems, speaking Bengali and Assamese. Much of Assam was ceded by Burma, 1825, it combined with part of Bengal to form a new prov. 1905. In 1947 the district of Sylhet was detached from Assam and amalgamated with Pakistan. The Naga Hill area became part of Nagaland, 1962. Area: 47,091 sq. m. Pop. 11,872,772.

ASSISI

City of Italy, 12 m. S.E. of Perugia, famous as the birthplace of St. Francis and the site of his monastery.

ASSIZES

In the older sense an enquiry, now used in Eng., Ireland and other countries for the visits of the judges to the cities and towns in the provs. The assizes are held 3 or 4 times a year for the trial of important criminal or civil cases. Judges of the Queen's Bench division of the High Court of Justice preside over the assizes and nowadays a Divorce Judge frequently attends.

ASSYRIA

Empire of the ancient world, comprising the district round Asshur, a city on the Tigris. Its people, the Semites were related to the Babylonians. Assyria existed as early as 2500 B.C. as a dependency of Babylon, c. 1400 B.C. it became indep. For the next 800 years its kings conducted almost incessant war against the Hittites and other peoples on their borders, with the result that their dominion was greatly extended. In the time of King Tiglath-Pileser I c. 1100 B.C. it was a great power. After a

period of decline, revived under Tiglath-Pileser IV c. 700 B.C. and conquered a good deal of Asia Minor, including Palestine and Syria and also parts of Arabia. Later Esarhaddon included Egypt in his realm. Babylonia and the rest of Mesopotamia had previously been conquered. The end came soon after this. In 607 B.C. the Medes took the city, and the Assyrian Empire came to an end. Excavations at Nineveh and elsewhere have revealed much of the culture of the Assyrians.

ASTER

Genus of perennial flowering plant, also called the Michaelmas daisy. The annual aster of the flower garden is *Callistephus*.

ASTEROID

Name for the minor planets. They lie between Mars and Jupiter, and the first to be discovered was *Ceres*, in 1801. In the 20th cent. this work was aided by photography, and in 1908, 117 new asteroids were found. Over 1,200 are known. *Ceres*, the largest is only 480 m. in diam.; the next largest are *Pallas*, *Vesta* and *Juno*.

ASTHMA

[as'-mə] Disease of respiratory tract characterised by attacks of breathlessness of long or short duration with periods of freedom from attacks. Hereditary predisposition in many cases, commoner in males and may commence at any age. Cause is unknown but over-sensitivity to foreign substances is a factor.

ASTOR

Amer. family. John Jacob Astor (1763-1848) b. Waldorf, near Heidelberg. He became the greatest of Amer. fur merchants. At the time of his d. he owned a large part of New York City and was worth 30 million dollars. William Waldorf Astor, 1st visct. (1848-1919) great-grandson of John Jacob, became socially prominent in Eng. and bought Hever Castle and Cliveden. His son William Waldorf Astor (1879-1952) Eng. politician and M.P. mar. in 1906, Nancy Y. Witcher Langhorne. In 1919 she was elected Unionist M.P. for Plymouth, the first woman to sit in the House of Commons. She d. 1964.

ASTRAKHAN

Russ. city and port in the A. Region of the R.S.F.S.R. on the Volga c. 40 m. from the Caspian Sea. There are some manufactures, shipbuilding and fishing. Pop. 324,000.

ASTROLOGY

In the ancient world astronomy and astrology formed one science, but in modern times its findings are regarded by many with distrust. An astrologer 'casts a horoscope' which is a map showing the position of the sun, moon and the planets within the 12 houses of the Zodiac at the moment of the subject's birth. By observing their positions and inter-relations, he makes inferences about the person's character and career.

ASTRONOMY

Science which treats of the celestial bodies and their nature, position, motions, etc. Early civilisations, e.g. the ancient Egyptian, had considerable knowledge of the stars in their courses and compiled accurate data on the motions of the planets. The Gks. handed on their knowledge to the Arabs, whose observations formed the basis of European astron. This prevailed until, in 1543, Copernicus pub. *On the Revolution of the Celestial Spheres*, in which he asserted that the planets circle round the sun. 70 years later Galileo built a telescope and proved Copernicus right. In the early 18th cent. Newton placed astron. upon a more scientific basis. Observational work became of increasing importance from the 18th cent. onwards. The Greenwich and Paris Observatories were founded in the latter part of

the 17th cent. In 1924, Edwin Hubble, using the new 100 in. reflector on Mt. Wilson discovered that the nebula in Andromeda was actually thousands of times further off than any single star he could see, and that it was a disc-shaped stellar system, or galaxy, isolated in space. It was found that nearby stars also were alike in type and arrangement, including our own galaxy in which the sun lies near the outer edge. The new conception of our earth is that of a cosmic pebble circling a minor star in one of millions of galaxies which are apparently rushing away from each other into unknown space, some at speeds upwards of 25 m. per sec. The 200 in. Hale reflector on Mt. Palomar has revealed a galaxy a billion light years distant. Our own galaxy is almost 200,000 light years wide (1 light year is the distance that light, moving 186,000 m. per sec. would travel in a year) and 20,000 thick. See COSMOLOGY, RADIO ASTRONOMY.

ASUNCION

[as-oon-syon'] Cap. and river port of Paraguay. A commercial centre, it has shipping industries and some manufactures. Pop. 300,000.

ASWAN

Town of Upper Egypt near the first cataract of the Nile, 110 m. S. of Luxor. The Aswan dam, opened 1902, provides water for irrigation schemes. Pop. 48,000.

ASYLUM

Sanctuary or place of refuge. Orig. a place where criminals could shelter from justice. The early Jews had cities of refuge. The term until recently was usually applied to institutions for persons suffering from severe mental diseases. The right of asylum is, in internat. law, the right possessed by one country to harbour refugees from another. A fugitive has no right to demand asylum from the country to which he flees, he is accepted or rejected at its discretion.

ASYUT

Town of Upper Egypt near the Nile, 200 m. S. of Cairo. The A. barrage on the Nile provides water for irrigation. Pop. 284,000.

ATACAMA

[ka-] Desert in Chile between the coast and the Andes, rich in nitrate, salt, borax and copper. Area 70,000 sq m.

ATATURK, Mustapha Kemal

(1881-1938) Turkish gen., statesman, and founder of Turkish republic. He set up nat. movement in Anatolia 1919. Elected Pres. at Ankara, 1919, he defeated Gk. invading forces 1921-2. At Lausanne, 1923, the Turkish Repub. was recognised. The sultanate and caliphate were abolished, and under Ataturk Turkey was modernised and secularised. He was re-elected Pres. 1931 and 1935.

ATHANASIAN CREED

Ascribed to Hilary, Bishop of Arles (429-419). One of the 3 ancient creeds of Christianity.

ATHEISM

Denial of the existence of God or gods. Assumes 5 forms: (a) *Dogmatic* asserts that there is no God. (b) *Scriptural* Atheism denies the possibility of knowing of divine existence. (c) *Critical* Atheism holds that evidence is not adequate to prove Theism. (d) Akin to (c) the *Philosophical* fails to find sufficient evidence of a God in the universe. (e) *Speculative* Atheism denies the possibility of demonstrating God's existence, but implies belief in Theism.

ATHENS

Cap. city of Greece, named after Athene, Gk. goddess of wisdom, situated on the plain of Attica, with hills to the N. 6 m. from its port, Piraeus, on the Gulf of Aegina. The ruined buildings on the hill called the Acropolis are the finest remains of the kind. The stadium

was restored for the Olympic Games. Around the Acropolis are remains of the ancient wall, within which are the Parthenon and Erechtheum, both carefully preserved. Athens began as a small state, but soon became the cap. of Attica. The kings disappeared and tyrants took their place c. 1000 B.C. Later the city became a democracy, and playing a leading part in defeating the Persians in 480 B.C. In the age of Pericles, c. 440 B.C. Athens was at the height of its power. From 431-403 B.C. Athens became involved in a war with Sparta. In the next cent. the Macedonians inflicted further humiliations upon the city which in A.D. 146 became part of the Rom. Empire. Pop. (including Piraeus) 1,852,709.

ATHLETICS

Physical games or contests e.g. running, jumping and field events such as throwing the javelin, discus, etc. The Gks. produced superb athletes. Athletic games and sports were common during the M.A. Modern athletics date from the 19th cent. In 1864 the annual athletic meeting between Oxford and Camb. was inaugurated. Other meetings were held in various places and the Amateur Athletic Assoc. was founded to supervise them. The movement is now world wide. In 1896 the modern Olympic Games were started and are held every 4 years. See OLYMPIC GAMES.

ATHLONE, Earl of

Brit. title, borne from 1692-1844 by the family of Van Riede. The title was given in 1917 to Alexander, Prince of Teck, a brother of Queen Mary, who mar. Alice, daughter of the Duke and Duchess of Albany. Gov.-Gen. of S. Africa, 1923-30, of Canada, 1940-46. D. 1957.

ATHOLL, Duchess of

Katherine Marjory (1874-1960) Scot. politician. Unionist M.P. for Kinross and West Perth from 1923-38. Parl. Sec. Board of Educ., 1924-29, and a Brit. delegate to the League of Nations Assembly, 1925. She resigned her seat as a protest against the Chamberlain appeasement policy.

ATHOS

Peninsula in Macedonia, Greece, culminating in Mt. Athos, 6,350 ft. high. There are c. 20 monasteries in the region.

ATLANTA

Cap. of Georgia, U.S.A.; railway and industrial centre, producing textiles and chems. Pop. 487,455.

ATLANTIC, BATTLE OF THE

In World War I a battle was fought between German U-boats attempting to sever Brit. supply lines to the U.S.A. etc., and Brit. anti-submarine vessels. A similar battle developed in World War II in which submarines and aircraft joined forces. Germany began the war with only 57 U-boats but by July, 1940, only 6 were operative for Atlantic operations, but even with the force then available 198,000 t. of merchant shipping were sunk in the last week of Oct. Between Sept. 1939 and Dec. 1941, nearly 10,000,000 t. had been destroyed and only 4 of this tonnage replaced. In the first half of 1941 monthly losses averaged 470,000 t. By the time of the entry of Amer. into the war, the U-boat fleet had increased to 249 vessels and Allied shipping losses in America, in May, 1942, rose to 354,489 t. and in June to 452,000 t. The peak of the struggle was reached in Mar. 1943, during which huge concentrations of U-boats attacked 4 consecutive Atlantic convoys in a 4-day battle and sank 37 ships for the loss of 1 U-boat. Gradually the Allied counter-measures began to take effect. The mid Atlantic gap was closed by extended air patrol, and aircraft of the R.A.F. Coastal Command were equipped with a new type of Radar which enabled them to locate enemy U-boats without revealing their own

28 • ATLANTIC CITY

approach. This resulted in a marked reduction in Allied shipping losses (Mar. 90, May 40, June 6 ships). The German reaction was the designing of 2 new types of U-boat and conventional U-boats were given better defensive radar, heavier A.A. armament and the acoustic torpedo. The bombing onslaught of the R.A.F. and the Amer. air force on German factories held up the production of the new U-boat engines. In the spring of 1944 Doenitz recalled his U-boats from the Atlantic to fit them with the Schnorkel breathing device, but already the Allied invasion was imminent.

ATLANTIC CITY

City and seaside resort of the U.S.A. on an Is. off the coast of New Jersey, near New York. Pop. 59,544.

ATLANTIC OCEAN

Ocean bounded by Amer. on the W. and Europe and Africa on the E. From N. to S. it covers some 8,500 m., stretching from the Arctic Ocean to the Antarctic cont. Its total area is 31,830,000 sq.m. There is a submarine ridge from E. Greenland through Iceland and the Faroes to N. Scot. Another ridge runs parallel to the continental coastlines down the centre of the Atlantic for 100° of latitude, and on it are the Azores, St. Paul's Is., Ascension, Tristan da Cunha and Bouvet Is. There are deeps either side of this ridge. The Atlantic is connected by channels with the Medit., North, Norwegian and Caribbean Seas, and the Gulf of Mexico.

ATLANTIS

Legendary continent said to have occupied almost the whole of the area now covered by the N. Atlantic Ocean, reaching on the N.E. to Scotland, on the N.W. to Labrador, and on the S. to the greater part of Brazil.

ATLAS

Range of mountains in N. Africa, extending for c. 1,500 m. from Cape Nun on the Atlantic Ocean through Morocco, Algeria and Tunis to the Medit. at Cape Bon. It is divided into 3 groups, the chief being the Gt. Atlas in Morocco, with many peaks over 10,000 ft.

ATMOSPHERE

Gaseous material surrounding the earth and other planets. Dry air consists of 21% of oxygen, 78% of nitrogen and 1% of argon and other gases; these proportions vary slightly. A moist atmosphere contains about 1.2% of water. At the earth's surface the temp. of the atmosphere varies with the lat. It decreases with alt. by about 1° C. for every 600 ft. up to a ht. of c. 7 miles, when it becomes constant at c. -60° C. Atmosphere reaches to c. 700 miles above the equator. See STRATOSPHERE. **Atmospheric Pressure.** The atmosphere, like other fluids, exerts a pressure on bodies immersed in it. The average pres. of the air at sea level is about the same as that which would be exerted by 34 ft. of water or 30 in. (76 cms.) of mercury. See BAROMETER.

ATOM

The smallest portion of an element which can exist. There are at least 101 principal varieties of atoms, corresponding to the 101 elements (90 of which occur in nature, the remainder having been made artificially). All are built to the same general plan—a positively charged central core or nucleus, (minute in comparison to the size of the atom) having most of the mass, and a cloud of electrons surrounding it. In a normal atom, the positive charge of the nucleus is just balanced by the negative charge of the electrons. The mass of an atom expressed in suitable units (oxygen=16) is the *atomic wt.* of the element, and ranges from 1 (hydrogen) to 238 (uranium) for the elements found in nature. The charge of the nucleus, measured in suitable units (electronic charge=-1) is the *atomic number* and has values between 1 (hy-

drogen) and 92 (uranium). A *molecule* is a group of atoms, either of the same element or of different elements. Chem. reactions occur between molecules. Atomic energy is energy obtained from nuclear (as opposed to chemical) reactions from fission, fusion, or disintegration of atomic nuclei. Of primary importance is the application of n.e. in the form of fission of heavy elements such as uranium and plutonium to the generation of useful power such as electricity. (See NUCLEAR POWER). In Brit. research work for the milit. programme is carried out by the Weapons Group of the Atomic Energy Authority, which is responsible for research into, and development of, components to orders placed by the Min. of Aviation and for the Authority's own work to improve types of explosive nuclear assemblies. In World War II 3 bombs were exploded which made use of the uncontrolled fission of uranium or plutonium to create an explosion of great violence. (1) At Alamogordo, U.S.A. in 1945, as a test. (2) By U.S. aircraft over the Jap. city of Hiroshima, Aug. 6th, 1945, when some 70,000 people were killed and all buildings within a mile radius were destroyed. (3) By U.S. aircraft over Nagasaki, Aug. 9th, 1945, with similarly devastating results. Further research has produced even more powerful weapons, but also uses for controlled nuclear fission. See RADIATION, RADIOACTIVE ISOTOPIES, SHIPS, NUCLEUS. **Atomic Energy Authority (U.K.).** Estab. by the Atomic Energy Authority Act, 1954, it is responsible for the control of atomic energy research and development. Sec. of State for Educ. is responsible for policy and for the Authority's expenditure. The chairman of the Authority is Sir William Penney. **Atomic Energy Commission.** Estab. by the General Assembly of U.N. in Jan. 1946. Together with the *Commission for Conventional Armaments* it dealt with different aspects of the armaments problem, and sent its reports to the Security Council. In Jan. 1952 the General Assembly approved the estab. of a new *Disarmament Commission* bringing atomic and conventional armaments under one body. **Atomic Energy Commission (U.S.).** Agency of the U.S. Government for designing and manufacturing atomic weapons, developing practical uses of atomic energy, promoting research and controlling information. Established by act of Congress in 1946.

ATONEMENT

(1) In Christian theology, the cancelling of man's sin by the sacrifice of Jesus Christ. The idea of propitiating the gods by sacrifice, is firmly rooted in primitive religions and has passed into more advanced faiths. It was held firmly by the Jews and there are many references to it in the O.T. From the Jews the idea came to Christian thought. (2) The Day of Atonement is the great fast day of the Jewish year.

ATROPINE See BILLADONNA.

ATTICA

District of ancient Greece, a peninsula on the E. coast. Its cap. was Athens.

ATTILA

(c. 406-453) King of the Huns. In 434 he and his brother succeeded their uncle. Having killed his brother, Attila brought many other barbarians under his rule and was soon at the head of a vast host. In 447 he led them across the Danube and their ravages made a terrible impression on the Byzantine Empire. Attila's hordes swept across Germany and entered Fr. Aetius, the Rom. and Theodoric, the Vandal, fought them on the Catalaunian Fields, near Châlons, in June, 451, and the Huns were utterly defeated, but were soon on the march again, invading and devastating Italy.

ATTLEE, Clement Richard, Earl (1883-1967) Eng. politician. B. Putney; educ.

Haileybury and Univ. Coll. Oxford. Called to the bar, 1905; joined the Fabian Soc. 1908. After service in World War I he was mayor of Stepney (1919-20); M.P. (Lab.), 1922-55; Leader of Opposition, 1935-40, 1951-5; Lord Privy Seal, 1940-2; Dominion Sec. and Deputy P.M. 1943; P.M. 1945-51. Created C.H. 1945; O.M. 1946; K.G. 1956; P.C.

AUBER, Daniel François Esprit [ô-bair] (1782-1871) Fr. composer. He wrote over 40 operas, some of whose overtures are well-known, e.g. *Fra Diavolo* and *Le Cheval de bronze*.

AUBERGINE

Annual edible plant of the family Solanaceae. It may reach a ht. of 3 ft. Its white or purple fruit is egg-shaped.

AUBREY, John (1626-97) Eng. writer. He pub. *Miscellanies* (1696), and left extensive MS. frag. notes issued in 1813 and, later ed. as *Brief Lives*.

AUCHINLACK, Sir Claude John Eyre (1884-) Brit. Gen. Educ. Wellington Coll. At the beginning of World War II he was in command in Narvik (1940), then in building defences in Brit. and then in India (1940-2). In Aug. 1942, he became once more C-in-C. India (1943). Promoted to F.M. in 1946 and retired in 1947.

AUCKLAND

Largest city and port of New Zealand, on a narrow strip of land between Manukau Harbour and Waitemata B. North Is. It is an important commercial and industrial centre. Timber, meat, wool and butter are exported. Settled, 1840, it was the 1st seat of govt. of New Zealand. Pop. 482,300.

AUCKLAND

Group of Is. in the Pacific Ocean, c. .80 m. S. of New Zealand. Area 234 sq. m.

AUCTION BRIDGE

Card game, a form of ordinary bridge, in which the right of making trumps is put up to auction. See BRIDGE; CONTRACT BRIDGE.

AUDEN, Wystan Hugh

[aw'-i] (1907-) Eng. poet. Educ. Christ Church, Oxford; pub. his first poems in 1930. Adopted Amer. citizenship, 1946. His vols. of poetry include the *Orators* (1932), *Selected Poems and Another Time* (1940). With Christopher Isherwood he wrote the verse play *Ascent of F6* (1936). *Poets of English Language* in 5 vols. was pub. in 1952. *The Shield of Achilles* (1956). Prof. of Poetry at Oxford, 1956-61.

AUGSBURG

[awgs'-] City of Bavaria, W. Germany, 35 m. N.W. of Munich, on the Lech. During the M.A. it was a great trading and financial centre and a free city until 1806. Industries include textiles, engineering works and paper mills. There is a cathedral. Pop. 208,000. The *Confession of A.* drawn up by Melancthon, 1530, is a statement of the Lutheran faith.

AUGUSTINE

(354-430) Saint and theologian. Having accepted Christianity, he was baptised 387. He was sent to assist the Bishop of Hippo and in 395 was himself elected bishop there. Augustine's writings include his *Confessions* and *De Civitate Dei*, a defence of the Christian Ch. and its place in the world.

AUGUSTINE

(d. 604) Eng. saint and archbp. Pope Gregory I, 597, sent him with 40 monks to convert the Eng. The party landed in Kent and by the kindness of King Ethelbert settled in Canterbury. In 601 was made archbp. over Eng. Founded Christ Ch., Canterbury, 603. Augustinian. Order of canons in the R.C. Ch. Their most famous house is the hospice on the Great St. Bernard Pass. They claim to have been founded by St. Augustine.

AUGUSTUS

(63 B.C.-A.D. 14) Roman emperor, son of Gaius Octavius and grandson of the sister of Julius Caesar (q.v.). After his father's d. he was adopted by his uncle. When Caesar was murdered in 44 B.C. he formed an alliance with Antony, from which sprang the triumvirate—Lepidus making the 3rd member—that restored order in Rome, by a ruthless severity towards its enemies. In 42 they defeated the murderers of Caesar at Philippi. Octavian took the W. portion and Antony the E. Octavian crushed Sextus Pompeius, and removed Lepidus from power before finally quarrelling with Antony in 32 B.C. contributory causes being Antony's intrigue with Cleopatra in Egypt and his repudiation of his wife, a sister of Octavian. Octavian's fleet won the famous sea fight at Actium in 31 B.C. Octavian was now sole ruler. A visit to Egypt was followed by a splendid triumph in 29 B.C. when the title of Augustus was given to him. In 27 B.C. further powers were given to him, including the command of the army with the title of imperator. For the next 41 years Augustus was an emperor with unlimited powers. These years were a period of peace and prosperity and have been named the Augustan Age. Reforms of various kinds made easier the lot of the people. Rome was rebuilt and literature flourished.

AUK

[awk] Two birds of the family Alcidae. The Great Auk lacked the power of flight. It was about the size of a goose, and was found in the N. hemisphere, esp. Newfoundland and Spitzbergen. It became extinct before 1850. The Little Auk is still found in the N. hemisphere. It is c. 8 in. long and can fly.

AURELIAN

[aw-rē-] (c. 212-275 A.D.) Rom. Emperor. On the d. of Claudius in 270 he was declared emperor by the troops. His short reign was occupied in beating back the barbarians who had invaded his empire, and in other wars. He introduced reforms into the army and the state. He was murdered near Byzantium in 275. Aurelian began the building of the great wall in Rome named after him.

AURICULA

Flowering plant, native to Switzerland. It has a rosette of smooth leaves and bears flowers on the top of a leafless stem.

AURIOL, Vincent

[ô'-rē-ol] (1884-1966) Fr. politician. First Socialist to become Pres. of the Fr. Repub. (1947). He became Sec. Gen. of the Soc. Party in 1920. He opposed the Vichy Govt. of 1940 and was imprisoned, but escaped to London in 1943 and joined de Gaulle. He became Pres. of the Constituent Assembly, 1946. He was first Pres. of the 4th Repub. 1947-53.

AUROBINDO, Shri

[aw-rô-bin-dô] (family name Ghose) (1872-1950) Indian philosopher. Educ. St. Paul's School,

30 • AUROCHS

Darjeeling; King's Coll. Cambridge, 1890. From 1893-1905 he was Principal and Prof. at the Baroda College. During the bomb outrages he was charged with inciting the populace to terrorism. Acquitted, he determined to follow in the footsteps of the great Hindu Rishis, gave up everything, and concentrated upon the intensive Yoga discipline which was to make the body, mind and spirit a perfect instrument for the manifestation of the Divine Life.

AUROCHS

German name for large extinct variety of wild cattle. It was found in Europe and from it the domesticated ox has sprung. It disappeared in the 17th cent. its last habitat being Lithuania.

AURORA BOREALIS

(or Northern Lights) Spectacular display of bands of light often seen in latitudes above 70°, and occasionally from Brit. They are produced in the upper atmosphere (c. 60 m. above the earth) as a result of the earth's magnetic field having been breached temporarily by atomic bombardment from the sun, which emits vast atomic clouds of electrified hydrogen atoms. These make the oxygen atoms in the atmosphere luminous. The *Aurora Australis* (Southern Lights) occurs in the S. Hemisphere.

AUSTEN, Jane

(1775-1817) Eng. novelist. B. Steventon, Hants. She d. Winchester. She pub. anonymously *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), *Emma* (1815). *Northanger Abbey* and *Persuasion* were pub. under her own name in 1818. Two early works, *Lady Susan* and *The Watsons* (a fragment) were pub. 1871, and *Sanditon*, a fragment of 1817, in 1925.

AUSTERLITZ

Small town in Moravia, Czechoslovakia, 10 m. E. of Brno, where, on Dec. 2, 1805, Napoleon defeated the emperors of Russia and Austria.

AUSTIN, Herbert, 1st Baron Austin

(1866-1941) Eng. manufacturer. B. Little Missenden, Bucks. he was educ. as an engineer. In a few years he was one of the largest makers of motor cars in the country. The Co. was esp. successful with a 7 h.p. model (1921), the 'baby Austin'. In 1952 the Austin Motor Co. became part of the British Motor Corp. M.P. for Birmingham 1919-24; raised to peerage 1936.

AUSTIN, John

(1790-1859) Eng. jurist. He was Prof. of Jurisprudence in the Univ. of London 1826-32. Austin's fame rests upon his writings. They are contained in 2 vols. *The Province of Jurisprudence Determined* and *Lectures on Jurisprudence*. His definitions are remarkable for their precision.

AUSTRALASIA

Term applied to Australia, New Zealand and the adjacent Is.

AUSTRALIA

The Commonwealth of Australia consists of the subcontinental island of Australia and the

island of Tasmania (2,945,000 sq.m.). Australia supports a pop. of only 11 million. The bulk of Australia lies between 15° and 35°S. and has extensive deserts. The continent consists of a W. plateau, reaching 3,000-4,000 ft. in the N.W. but generally 1,000-2,000 ft. in height. This slopes eastwards to a great lowland. S.E. is the basin of the Darling and Murray river systems (the most important rivers in Australia) which yield irrigation water. These lowlands are separated from the E. coast by the Great Dividing Range, reaching 5,000-7,000 ft. (Mt. Kosciusko, 7,305 ft.). In the extreme E. of Australia is a narrow coastal lowland where is found a large proportion of the population. Off the E. coast of Queensland the Great Barrier Reef encloses shallow channels 50-150 m. in width, for a distance of 1,100 m. The interior is arid or semi-arid and the rivers are dry for long periods. The shortage of surface water is partly compensated by underground supplies, particularly in interior Queensland, the Lower Darling basin and the N. part of Western Australia. Rainfall everywhere decreases rapidly inland. Tasmania is sufficiently far S. to lie in the path of the westerly winds all year round and thus has no dry season. Whilst the N. coastal fringe is continuously hot, 70°-90° F. the interior experiences great seasonal variations. The S.E. and S. coastal areas are more equable, temperatures ranging seasonally from about 55° F. to 70° F. Early in the 17th cent. the Dutch discovered the Australian W. and N. coasts. Exploration led to the discovery of 'Van Diemen's Land' (Tasmania). In 1688 and 1697 an Englishman, Dampier, investigated the N. and NW coasts. The E. coast remained unknown until Cook landed at Botany Bay (April 29, 1770), subsequently sailing the length of the coast. In 1788, convicts and soldiers landed at Botany Bay and founded a penal settlement at Sydney; from here the early colony of New South Wales developed. Early attempts at farming met with difficulties, but by 1815 freed convicts and ex-soldiers had settled within 100 m. of Sydney. In 1805 Capt. MacArthur imported merino sheep from the Royal stud at Kew and by 1835 Austral wool had almost replaced continental wool on the London market. Van Diemen's Land, settled from about 1803, became a separate colony in 1825, being re-named Tasmania in 1851. In 1813 a passage over the Blue Mountains was found and the Bathurst Plains, suitable for extensive sheep grazing, discovered, thus opening up the possibility of vast expansion of the original colony of New South Wales. Western Australia was founded in 1829. In 1836, a colony was estab. at Port Adelaide; this became South Australia. Victoria was settled first from Tasmania and from the Sydney area: it was separated from New South Wales in 1851, as was Queensland in 1859. Northern Territory was annexed to S. Australia in 1863, and passed to direct Commonwealth control in 1911. Since 1947 has had a measure of self-govt. The Commonwealth of Australia came into being in 1901. Australia is the leading world producer of wool, for nearly 150 years the basis of prosperity. The best sheep country is the grassland of the rolling hills between the E. mountains and the desert. Cattle grazing is important in those areas unsuitable for sheep because of high temperatures. The region of erratic summer rains in the tropical N. is famous for cattle ranching. Stock are 'overlanded' to rail-heads or coastal processing works; fattening is not possible save in S.E. Queensland. The E. coastal areas, on account of high rainfall, are better suited to dairying than to wheat or sheep. Refrigeration opened the U.K. market for Australian dairy products. Towards the end of the 19th cent. the belt of country from Spencer Gulf along the Murray river and N. along the W. foothills of the mountains was recognised

as having a climate eminently suitable for large scale wheat farming. The area under cultivation expanded into the semi-arid interior as quick-maturing, drought resistant wheats and dry-farming methods were developed. From 18 million in 1930 the acreage of wheat fell to around 8 million in 1944. It is now stabilised at about 12 million acres, and yields are increasing with the introduction of crop rotations and with the keeping of sheep. Sub-tropical temperatures and reliable rainfall enable the growing of *sugar* and *cotton* in coastal Queensland. *Maize* and *sorghum* are also grown. *Vines* are grown in those parts of New South Wales, Victoria and S. Australia having Mediterranean climate. *Table grapes*, *raisins*, *currants* and *wine* are produced for home and export. Tasmanian *apples* are well known, and *citrus* fruits are grown widely except in Tasmania. Queensland grows *pineapples* and *bananas*. Whilst artesian water is valuable for agriculturists it is generally unsuitable for irrigation but the Murray river and its tributaries have been dammed for this purpose. The Snowy Mts. hydro-electric scheme is designed to provide water and electric power over a wide area of S.E. Australia. The effects of stimulating immigration and opening up the semi-arid interior have been of far greater importance than the mere material production. *Gold*: From 1851 a series of discoveries led to gold rushes in several parts of New South Wales, Victoria and Australia. Important fields at present are Marble Bar, Meekatharra and Kalbarri in Western Australia and Charters Towers and Rockhampton in Queensland. *Coal*: main centres of production are Newcastle-Maitland and Illawarra, Lithgow and Burrigong fields (N.S.W.) and Bundamba and Dawson Valley (Q.). *Lignite*: main producers are Victoria and S. Australia. *Iron ore*: very large deposits exist and a substantial iron and steel industry is centred mainly on Newcastle, Wollongong, Port Kembla (N.S.W.); Whyalla and Kwinana (S.A.), and W. Australia. *Lead and zinc*: Australia is one of the world's great producers. Amongst many centres are Broken Hill, New South Wales, and Mount Isa, Queensland. Since World War II, a substantial heavy industry has developed and the country is now virtually self-contained as regards consumer goods. The coastal nature of isolated early settlements and the still essentially peripheral distribution of population, emphasised the importance of shipping. Railway development was haphazard, serving particular ports and with no thought of a national system. Inter-capital city gauges are in process of standardisation to 4 ft. 8½ in. Air transport is particularly important. In 1927 Canberra became the seat of Govt. The Commonwealth also administers Papua and New Guinea. The Sovereign is represented by a Gov. General and there is a Senate and House of Representatives, but sovereign power remains with the States. The Commonwealth has universal adult suffrage. Decimal coinage was introduced, Feb. 1966.

AUSTRALIAN CAPITAL TERRITORY See CANBERRA.

AUSTRIA
 Repub. of C. Europe lying S. of Germany and Czechoslovakia. It is chiefly mountainous, the highest points being in the Alps in the S.W. (Gross Glockner, 12,470 ft.). Mt. passes include the Brenner and Semmering. The Danube flows across the N. through a broad valley, which widens near Vienna. Other rivers are the Inn, Salzach and Enns, tributaries of the Danube. It is mainly an agricultural country, but food-stuffs are imported for Vienna; wheat, rye, barley, oats, potatoes, sugar beet and tobacco are grown. Styrian iron ore has long been important; other minerals include gold, silver, copper, lead and tin. Timber is an important product. The rivers offer power and transport. Vienna

is the cap. and commercial centre. The country is divided into 9 provs. for admin. purposes, viz. Vienna, Lower and Upper Austria, Salzburg, Styria, Carinthia, Tirol, Vorarlberg and Burgenland. Area: 32,374 sq.m. Pop. 7,074,000. Austria was made a duchy 1156, and, 1282, passed under the rule of the Hapsburg family, who ruled until 1918. During the 19th cent. the Aust. Empire joined with Hungary on equal terms to form the Dual Monarchy (Austria-Hungary), which was allied with Germany in World War I. In 1938 Austria was annexed by Germany and incorporated into the German Reich. Her independence was restored after World War II and in Jan. 1946, she was recognised as a state, with her 1937 frontiers. In May, 1955, the Austrian State Treaty was signed. This recognised the re-establishment of Austria as a sovereign, indep. and democratic state, having the same frontiers as those of 1937.

AUSTRIAN SUCCESSION, War of the (1740-48) European war. It began when Frederick the Great of Prussia refused to recognise Maria Theresa as Empress and invaded Silesia, and it ended with the Peace of Aix-la-Chapelle.

AUTOCRACY

Totalitarian form of govt. in which all power rests in one man and not a party; a despotism. Common in the Gk. world, the system reappeared in Italy in the late M.A. and reached its culmination in the Fr. of Louis XIV.

AUTOMATIC AIR NAVIGATOR

Decca Flight Log Air navigating system which automatically shows the pilot the position and track of his aircraft on a map.

AUTOMATIC PILOT

Instrument used in ships and in aircraft ("George") which enables the pilot to leave the controls for a short time. Based on the principle of the gyroscope (q.v.) it permits the craft to move on an even keel and in a set direction without the immediate agency of a human pilot.

AUTOMATIC COMPUTING ENGINES

High speed electronic digital computers normally working in the binary scale of numbers, i.e. numbers represented by sequences of noughts or ones instead of the usual sequences of decimal digits. The machines work at the rate of a million binary digits per sec. Computations can be carried out with a precision of one part in a thousand million if necessary. Instructions and data are fed in by means of punched cards, and the results put out in similar form.

AUTOMATION

The name given to the technique of making a process automatic, extended to apply to the operation and control of automatic systems, especially control by electronic devices.

AUTOMOBILE ASSOCIATION, The

The largest motoring organisation in the world. It was formed in 1905 at a critical time. The Motor Car Act of 1903 had fixed a speed limit of 20 m.p.h. and anyone exceeding this was heavily fined. To combat this some motoring enthusiasts enlisted cyclists to patrol the Brighton Road, warning drivers of the police speed traps. Now extended as general service to motorists. Today, e.g., an important road is covered by the Association's Patrols and there are more than 1,000 roadside telephone boxes and Radio Controlled Patrol Service Centres from which help can be obtained. Members are offered free legal advice. The Home Touring Department issues routes for journeys in Brit. whilst shipping space is booked and customs documents and routes for touring abroad are provided. The A.A. Handbook, issued to members biennially, contains details of 4,500 hotels and of more than 6,000 garages. In addition to its London H.Q. the

Old and new style badges

A.A. has 32 Area Offices, and 24 Port and Air-port Offices in the Brit. Isles, and representatives at Continental ports.

AUTUMN

The third of the 4 seasons. In the N. Hemisphere it commences at the Autumnal Equinox when the Sun crosses from the N. to the S. of the Equator. As at the Spring Equinox, day and night are of equal duration throughout the world. Autumn terminates (astronomically) at the Winter Solstice, Dec. 21-22.

AUVERGNE

[ô-vairn'] District of C. Fr. In the W. are the extinct volcanoes of the A. Mts. rising to over 6,000 ft.

AVALON

In Celtic legend the place where heroes went at d.

AVATAR

[a-vâ-tar'] In Hindu philosophy, the highest avatar is a manifestation on Earth in human form of the Second Aspect of the Trinity, i.e. of Vishnu.

AVEBURY

Village of Wilts. 7 m. W. of Marlborough, with circles of stones, the outer circle being c. 500 yds. in diameter.

AVENS

(*Geum*) Perennial plant of the family Rosaceae. There are 2 species, common and water avens.

AVERNUS

Circular lake in Italy, near Naples, crater of a volcano. The ancients looked upon it as the entrance to the infernal regions.

AVERROES

(1126-98) The Arab philosopher, Abul-ibn-Roshd. He took Aristotle's ideas and gave them a new currency, founding the school of thought to which Roger Bacon belonged.

AVIATION

The first practical heavier-than-air flying machine was built by the brothers Wilbur and Orville Wright and on December 17th, 1903, at Kitty Hawk, North Carolina, U.S.A., it covered 120 ft. on its first flight, with Orville at the controls. Later on the same day, it attained a distance of 852 ft. piloted by Wilbur. In 1909, Blériot flew the 31 m. across the Eng. Channel from a point near Calais to Dover Castle in a monoplane with a 25 horse power motor. World War I (1914-18) brought rapid development in aeronautics, and among the famous aircraft of this period were the Sopwith *Pup* and *Camel*, the Bristol Fighter, the Fokker Triplane and *Albatross*. On 14-15th June, 1919, Capt. John Alcock and Lieut. Arthur Whitten-Brown made the first W.-E. Atlantic crossing (Newfoundland to Ireland) in a Vickers *Vimy* powered by two Rolls-Royce *Eagle* engines. Other famous flights followed, notably Capt. Charles Lindbergh's first solo crossing of the Atlantic in a Ryan monoplane (*Spirit of St. Louis*) on 20-21st May, 1927 and the first flight across the Pacific by Capt. Kingsford Smith and three companions in a three-engined Pockker monoplane (*Southern Cross*) on 31st May, 1928. The first E.-W. solo crossing of

the Atlantic was accomplished by Jim Mollison on 18-19th Aug. 1932, in a D.H. *Puss Moth*. During the 1930s, the biplane was almost completely superseded by the monoplane, and better streamlining and the retractable undercarriage brought greatly improved performance. In 1931, Brit. won the Schneider Trophy (awarded in races for seaplanes) for the third time, and therefore outright; the speed, 340 m.p.h. From the design of the winning aircraft, R. J. Mitchell developed the famous *Spitfire*. The Hawker *Hurricane* also appeared in the mid-1930s, and these two fighters were conspicuous in the Battle of Britain (q.v.). Air power was of supreme importance throughout World War II (1939-45) and again great advances in design were made, particularly in the power and reliability of engines. Apart from the Vickers-Supermarine *Spitfire* and Hawker *Hurricane* already mentioned, famous Brit. aircraft of this period included the Vickers *Wellington*, Handley Page *Halifax* and Avro *Lancaster* bombers, the Bristol *Blenheim* and de Havilland *Mosquito* fighter-bombers, and the Short *Sunderland* flying-boat which after the war developed into the *Empire* Class flying-boat which pioneered many overseas routes. From America came the Boeing *Flying Fortress*, used by the U.S.A.F. in large numbers in daylight raids over Germany, the Douglas *Dakota* transport, *Mustang* fighter, *Harvard* trainer and many others. German machines of note were the Messerschmitt 109 and 110 fighters, Heinkel 111 and Dornier 215 bombers, and the Junkers 88 fighter-bomber. The Germans had flown a jet plane, the Heinkel 178, in August, 1939, but it was not until early in 1945 that the twin-jet Me262 fighter-bomber came into service, too late to affect the outcome of the war. The first Brit. jet-propelled aircraft, the Gloster *E.28/39* piloted by Flt. Lt. P. E. G. Sayer, had meantime made its maiden flight at Cranwell on 15th May, 1941, and by 1945 the Gloster *Meteor*, powered by two Rolls-Royce turbojets, and the D.H. *Vampire*, were both in service. In 1945, a new version of the *Meteor* achieved a world speed record of 606 m.p.h. Designers were next confronted with the problem of the "sound barrier", i.e. the shock waves experienced as an aircraft approaches the speed of sound (Mach 1). Capt. Yeager of the U.S.A.F. flew a rocket-propelled *Bell X-1* beyond the speed of sound in 1947, and John Derry, a de Havilland test pilot, almost certainly achieved Mach 1 in a D.H. 108 research machine in 1948. In 1956, the Fairey *Delta 2* set up a world speed record of 1,132 m.p.h. piloted by Peter Twiss. Supersonic fighters are now standard equipment in all air forces and rocket-propelled machines such as the U.S. X-15 have flown at over 4,000 m.p.h. Further developments in milit. aircraft include, vertical take-off and landing (V.T.O.L.) machines which could operate from small areas such as jungle clearings, and short take-off and landing (S.T.O.L.) aircraft, such as transports, which can use comparatively short runways. Civil Aviation. The first genuine commercial air service was that operated by German airships between Berlin and Friedrichshafen in 1912-3. After World War I, several Brit. services started up and 1924 these were merged under Imperial Airways Ltd., and Brit. Airways Ltd. in 1940. The two largest Brit. airlines are the state-operated British Overseas Airways Corporation (B.O.A.C.) and British European Airways (B.E.A.). The two main U.S. internat. carriers are Pan American World Airways and Trans World Airlines. Other major operators are Air France, Air Canada, Luft Hansa (W. Germany), Alitalia, S.A.S. (Scandinavia), Sabena (Belgium), K.L.M. (Netherlands), Air India, J.A.L. and All Nippon (Japan), A.N.A. and T.A.A. (Australia) and Aeroflot (Soviet Union). About 90 million passengers are carried on scheduled airlines each

year, and traffic has for many years risen at about 13 per cent annually. All legal aspects of civil aviation are supervised by the International Civil Aviation Organisation (I.C.A.O.); commercial transportation is the concern of the International Air Transport Association (I.A.T.A.). The first jet airliner was the British D.H. Comet 1 which entered service with B.O.A.C. on May 1st, 1952. It was followed by the highly successful Amer. Boeing 707 and 720, and Douglas DC-8. Typical of the new generation of short-haul airliners is the B.A.C. One-Eleven, carrying 70 passengers at 540 m.p.h. The first supersonic airliner is the Concord, under joint development by the British Aircraft Corp. and Sud-Aviation (France), designed to carry up to 130 passengers a distance of 3,500 miles at 1,400 m.p.h. See JET PROPULSION.

AVICENNA

[i-sen'-a] (Ibn Sina) (979-1037) Arabian physician and philosopher. His most famous medical work was his *Canon of Medicine*, in 5 books. Avicenna's second most important work is *Book of Recovery*. This contains treatises on logic, physics, mathematics, metaphysics, etc., which determined the classification of the sciences as taught in the medieval schools of Europe.

AVIGNON

[av'-nyon] Cap. of Vaucluse dept., Fr., standing on a hill above the Rhône, 53 m. from Marseilles. The chief building is the great palace in which the Popes lived from 1309 to 1378. In front of this is the famous bridge. Pop. 75,181.

AVOCET

Bird with leaden blue feet, long legs, long slender up-curved black beak and black-and-white plumage, found nearly all over the world. Formerly bred in E. Anglia, now only an irregular migrant in Eng.

AVOIRDUPOIS

System of weight in use in Britain and Amer. See TABLE, p. 472.

AVON

Name of 3 rivers in Eng. The Warwickshire Avon rises near Naseby, in Northants, and flows past Warwick and Stratford, to join the Severn at Tewkesbury. The Bristol Avon rises in the Cotswolds and flows by Bath and Bristol to the Severn at Avonmouth. The Wiltshire Avon flows from Devizes, past Salisbury, to the Eng. Channel at Christchurch.

AVRANCHES

[i-vran-'sh] Town of Manche dept. Fr. c. 70 m. S. of Cherbourg. One of the first ports to be recaptured by the Allies in June, 1944.

AWE

Freshwater loch in Argyllshire 22 m. E. of Oban. The longest in Scot. it covers c. 15 sq.m. There are several ls. in the loch. River Awe, 5 m. long, flows from Loch Awe to Loch Etive, through the Pass of Brander.

AXIS

Name given to anti-allied forces in World War II. The Rome-Berlin Axis was formed in 1936 during the Ital. invasion of Abyssinia. The term was extended to include Japan (Sept. 1940), and then Hungary, Bulgaria and Rumania.

AXMINSTER

Rural district and market town of Devonshire, on the Axe, 25 m. E. of Exeter, famous for carpets.

AXOLOTL

[aksó-lot'l] Larva, or early form of the Salamander (*Amblystoma*) with external gills. Found in N. Amer. it resembles a large newt. It becomes a Salamander when deprived of water, losing its gills, and growing slender.

AYE-AYE

[i-i] (*Chiromys*) Animal belonging to lemur family, found only in Madagascar.

AYESHA

[i'-ye-sha] (610-677) Favourite wife of Mohammed. It is said that she was the only wife of the Prophet who remained a virgin. He d. in her arms.

AYLESBURY

Borough and market and county town of Bucks. 40 m. N.W. of London. The town gives its name to a duck bred in the district. Pop. 29,090.

AYR

Burgh and county town of Ayrshire at the mouth of the river Ayr, 40 m. S.W. of Glasgow. The historic sites include the 'Twa Brigs' made famous by Burns. Pop. 44,941.

AYRSHIRE

County of S. Scot. with a coastline on the Firth of Clyde. In the S. are some hills, but it is mainly flat. There are a number of short rivers, Ayr, Irvine, Garnock, Doon and Girvan, and several lochs. Farming is the chief occupation but there are coal mines. The county is noted for its cows and its cheese. Assoc. with Burns and James Boswell. Places of interest include Turnberry Castle and Crossraguel Abbey. Ayr is the county town. With Bute the county returns 5 members to Parl. Pop. 543,367.

AZALEA

[i-zá-lia] Genus of deciduous shrubs of the family Ericaceae. Orig. brought from N. Amer., China and Japan, they have been extensively cultivated in Brit., Holland and Belgium. A Brit. species *A. procumbens* is found in Scot.

AZERBAIDJAN

[i-bi-ján] Constituent repub. of the U.S.S.R. lying W. of the Caspian Sea and N. of Persia. Oil refining is concentrated round Baku, the cap. Cotton, rice and lucerne are produced. Area: 33,436 sq.m. Pop. 3,700,000.

AZORES

Group of Portuguese Is. in the Atlantic Ocean, some 900 m. W. of Lisbon. They are divided into 3 groups: Flores and Corvo; Terceira, Pico, Faial, S. Jorge and Graciosa; S. Miguel and Sta. Maria. Of these the largest is S. Miguel. The climate is mild; agriculture and fishing are the chief occupations. Angra, in Terceira, is the cap. For admin. purposes the Azores form 3 districts. Portugal colonised the Is. in the 15th cent. Area: 922 sq.m. Pop. 318,558.

AZOV, Sea of

Gulf in the S. of the U.S.S.R., N. of the Black Sea. There are seaports, notably Taganrog and Zhdanov. The Don flows into it.

AZTEC

Indian people living in Mexico when the Spaniards invaded the country in the 15th cent. They came from the N. and usurped the Toltec culture. They founded a powerful kingdom, conquered by Cortes in the 16th cent. The race and its language still survive; the latter is a *Nahuatl* dialect. The Aztecs were advanced in agric., art, archit. and engineering. They worshipped many gods and the priests were powerful.

B

2nd letter and 1st consonant in the Eng. and most other alphabets. It corresponds to the Greek *Beta* and the Semitic *Beth*. It is a mute labial, pronounced solely by the lips. It is often unsounded when preceded by *m* as in *dumb* or when followed by *t* as in *debt*.

BALBEK

Ancient city of the Lebanon, 35 m. N.W. of Damascus, founded by the Phoenicians. It was a centre for the worship of Baal, and its ruins include massive temples.

BABOON

Species of monkey. Ferocious, ugly and strong, they travel easily on all fours. Natives of Asia and Africa, they usually inhabit rocky places, and are gregarious. The muzzle is dog-like and the tail moderate.

BABYLON

Ancient city of Asia, on the Euphrates, cap. of the Babylonian Empire, c. 60 m. S. of Baghdad. Its great period was from c. 1800-500 a.c., but its foundation may have been 3,000 years before. It stood on both sides of the river and was an enormous city filled with magnificent buildings. Its hanging gardens were counted 1 of the 7 wonders of the world. When Cyrus took it from Belshazzar it passed to the Persians. Alexander the Great, who d. here, included it in his empire, but after his time decay set in. *Babylonia* [-l6-] One of the great empires of the ancient world: the country through which the Tigris and the Euphrates flowed, and prob. inhabited by civilised man as far back as 9000 a.c. The chief people were the Sumerians, to whom Babylonia owes its earliest culture, in the S. and the Akkadians in the N. Of the City States the chief were Akkad, Lagash, Ur, Kish, Erech, Sippar, Opis, Umma and Adab. The greatest ruler was Sargon, King of Akkad, who lived c. 3800 a.c. About 2300 a.c. the Kingdom or Empire of Babylonia came into being, and survived until 539 a.c. Of its 1st dynasty the greatest king was Hammurabi, the law-giver, who founded Nippur. Before 1200 a.c. the power of B. waned. To some extent it was restored by Nebuchadnezzar I, c. 600 a.c. A 2nd period of decline was checked by a 2nd Nebuchadnezzar, the king of the Bible story. After his d., 561, the end came quickly. In 539 the Persians entered Babylon and the empire disappeared. The Babylonians were excellent architects, had an extensive knowledge of art and letters, and an elaborate system of law. *Babylonian Captivity*. Period spent by the Jews after Nebuchadnezzar, the Babylonian emperor, had captured Jerusalem c. 600 a.c.

BACH, Johann Sebastian

(1685-1750) German composer. For the last 27 years of his life he was Cantor of St. Thomas' School in Leipzig. His works include suites, 48 Preludes and Fugues for keyboard instruments, sonatas and concertos for violin and keyboard instrument, the 6 Brandenburg Concertos, organ music, church cantatas, the Mass in B minor, the St. John and the St. Matthew Passions. One of his sons was Carl Philipp Emanuel B. (1714-88) who was Court Musician to Frederick the Great. Another was John Christian B. (1735-82) who settled in London in 1762 and became known as the Eng. Bach.

BACON, Francis

(1561-1626) Eng. philosopher and lawyer. B. London; nephew of William Cecil, Lord Burghley; educ. Trinity Coll., Camb.; studied law at Gray's Inn; M.P. 1584; Queen's Council, 1597; prominent in the prosecution of Essex, who had befriended him, 1601; attorney-gen., 1613; Lord Keeper, 1617; Lord Chancellor and Baron Verulam, 1618; Viscount St. Albans, 1621; imprisoned and fined £40,000 for taking bribes, 1621. Bacon wrote *Essays* (1597, augmented 1612 and 1625), a *History of Henry the Seventh* (1622) and phil. works *The Advancement of Learning* (1605), *Novum Organum* (*The New Instrument*) in Latin (1620), *The New Atlantis* (1626). His phil. of science, with its power of organisation and its emphasis on the experimental method, had profound and lasting influence.

BACON, Roger

(c. 1214-94) Eng. scholar, scientist and philosopher. B. Somerset, studied at Oxford and in Paris. Returned to Oxford, joined Franciscan order, and became famous as a teacher. He described maths. as the gate and key to science, and experimentation as the only basis of certainty. He is said to have invented gunpowder. His works include *Opus Majus*, *Opus Minus* and *Opus Tertium* (1267-8). He was condemned by the Ch. and imprisoned, 1277-92. See *Roger Bacon and his Search for a Universal Science* by Stewart C. Easton (1952).

BACTERIA

One-celled organism of microscopic dimensions. The common bacteria are (1) the *coccus*—small beadlike bodies which cause septic skin conditions. (2) *bacillus*—rod shaped germs which cause typhoid fever, anthrax, dysentery and other diseases. (3) *fungus*—filamentous structures which cause actinomycosis, and other diseases. (4) *virus*—ultra-microscopic germs which produce infantile paralysis and infectious jaundice. In the plant kingdom bacteria are essential for the life of plants as they produce from the soil the basic elements of plant nourishment: nitrogen, oxygen and carbon. *Bacteriology*. The branch of science concerned with the study of a group of organisms collectively termed bacteria. These belong to the vegetable kingdom. Until the middle of the 19th cent., bacteria were regarded in the scientific world as "curiosities of the microscope." Pasteur laid the foundations of bacteriology by his classical studies of yeasts and their relation to the phenomena of fermentation. In 1863, the association of bacteria with disease was established by Davaine, who discovered a specific bacillus in the blood of animals suffering from anthrax. This relationship was further investigated by Pasteur. He was followed by Koch, who discovered the tubercle bacillus. The mosquito cycle of the malarial parasite was described by Ross in 1897 and the spirochaete of syphilis in 1905 by Schaudinn and Haffmann. Industrially, bacteria are of extreme importance. The fermentation of wine and beer; the ripening of cheese and tobacco; the process of tanning and the preparation of indigo are dependent upon bacterial activity.

BADAJOS

[ba' - da - hoz, bada - choth'] Sp. city, cap. of Badajoz prov. on the Guadiana 4 m. from the

Portuguese frontier. During the Peninsular War it was stormed by Wellington in 1812. There is a cath. (13th cent.) and castle. Pop. 100,974.

BADEN

[ba'-] Former state of W. Germany, W. of Württemberg and divided from Switzerland and Fr. by the Rhine. Baden was formed, 1771, by the union of several small states; it was part of the German Empire, 1871-1918. In 1952 Baden was merged with Württemberg to form the state of Baden-Württemberg (q.v.).

BADEN-POWELL, of Gilwell, Robert
1st Baron (1857-1941) Brit. soldier, and founder of the Boy Scout movement. He saw active service in India and Africa and was popular as a hero of Mafeking. For his enduring work in organising the Boy Scout movement (1908), he was knighted (1909) and received the O.M. 1937.

BADEN-WÜRTTEMBERG

State of S.W. Germany. Bounded to the S and W. by the Rhine, the soil is fertile and there are vineyards, orchards and forests. Industries include metal manufactures, textiles, chemicals and electrical equipment. The Black Forest, an important tourist centre, is famous for clocks. Cap. is Stuttgart. Area: 13,920 sq. m. Pop. 7,759,000.

BADGER

Nocturnal mammal which lives mainly underground and feeds on insects, roots, and, at times, mice and young birds. Its average length is 3 ft. and it is grey with black-striped head. It is found in Brit., in various parts of Europe and in China.

BAEDEKER, Karl

(1801-59) German publisher. In 1839 with John Murray, the London pub., he issued a guide book to Holland, Belgium and the Rhineland. Others followed, and, before World War I, these guides, which were also pub. in Eng. and Fr., were the most popular of their kind.

BAEKELAND, Leo Hendrik

[bak'-land] (1863-1934) Belgian-Amer. chemist. He invented a photo-printing paper which could be used in artificial light (Vexol paper). Also did research into electro-chemistry, synthetic resins, electrical insulation, and by his discovery of *Bakelite*, was a founder of the plastics industry.

BAEL

Plant akin to the orange. It grows in India. A perfume and a dye are obtained from the rind, and the seeds used to make cement.

BAFFIN BAY

BEE

Insect belonging to the order Hymenoptera, family Apoidea. They have 4 membranous wings and possess stings. Some, such as the Honey-bee, and the Humble-bee, live in communities; others are solitary. The best known member of the family is *Apis mellifica*, the Hive or Honey-bee. There are 3 kinds of bees in a hive, (1) the queen bee, the one fertile female, (2) the drones (males), and (3) the workers, which are sterile females. They have an elaborate organisation for collecting pollen from flowers and storing it in the hives. The workers build the combs of honey which, at the proper time, may be taken from the hive, and they produce beeswax. At times, usually in the autumn, the drones are ejected and die. Summer hatched workers also seldom live more than 6 weeks but workers hatched in the autumn remain alive until the following spring. The bee is hatched from an egg laid by the queen in 1 of the cells of the comb. It emerges as a grub and is fed by the workers. The cell is then sealed and the grub becomes a pupa from which an adult bee develops. When a hive is over-crowded some of the bees with the old queen swarm out. Preparation is made before swarming to ensure that 1 new virgin queen remains with the colony. The new queen with a number of males from the residue of the orig. hive makes a nuptial flight. She

returns to the old nest fertilised and begins building up the community anew. Beekeeping has been practised for at least 7,000 years. It is a thriving minor industry in Brit.

BEE EATER

BLOOD

Fluid flowing in blood vessels of mammals. Its continuous circulation, from heart to arteries, arteries to capillaries, capillaries to veins and veins back to heart was first discovered by Harvey in 1628. Blood is composed of plasma, blood cells and platelets. In normal people there are 5,000,000 red cells per cubic mm.; of blood 10,000-12,000 white cells per cubic mm.; 500,000 platelets per cubic mm. **Blood Groups.** Existence proved by Landsteiner in 1901. Group AB is the universal recipient and constitutes 7% of the population; Group O is the universal donor and constitutes 46%. Rh. (Rhesus) factor has been shown to be important in transfusion because if a person who does not possess this group is transfused with blood from a person who does, a further transfusion with the same blood will have serious results. 85% of the population have the Rh. factor or are Rh. positive. **Blood-Pressure.** With each beat of the heart a definite quantity of blood is forced into the arteries; and, as these tubes have elastic walls which recoil on the impact of the blood,

52 • BLOODHOUND

the intermittency of the flow is counteracted, and a continuous circulation results. These forces represent the blood-pressure, and this pressure is dependent upon two factors, viz. the efficiency of the heart pump, and the calibre and elasticity of the arteries. A rough estimation of the blood-pressure can be obtained by feeling the pulse at the wrist. Hard physical work and mental excitement tend temporarily to raise the figure, but there may be considerable variation without departure from health.

BLOODHOUND

A large black-and-tan hound with long, smooth, drooping ears, wrinkled forehead, red haws to the eye-sockets, deep baying note, gentle disposition and highly developed power of scent. The dominant religion of Ceylon, it is still found in parts of India, in the Lamaism of Tibet, in S.E. Asia, in China, and in Japan. Man is conceived to be an individualised self-conscious being linked irrevocably to the One Universal Cause. The aim of Buddhism is the achievement of *Nirvana* and the kernel of its ethics is the Buddha's Noble Eightfold Path, namely—(1) right comprehension (freedom from prejudices, illusions and superstitions), (2) right resolution (pressing forward to the higher goal), (3) right speech (kindly, faithful, true), (4) right conduct (peace-loving,

honest, pure), (5) right living (harmless livelihood, hurting no living thing), (6) right effort (perseverance in well-doing), (7) right meditation (intellectual activity, always directed to Rule and Doctrine), (8) right rapture (intense reflection, the mind being wholly withdrawn from things of time and sense). As in Hinduism, the first of the two doctrines fundamental to Buddhism is that of *Reincarnation*. The second important doctrine is that of *Karma*. Thoughts and actions react upon the individual soul according to whether they are energised constructively or destructively, and rewards and punishments are of man's own making according to whether he serves the forces of good or evil.

Each colony is founded in the late spring or early summer by a single fecundated queen mated in the previous summer or autumn. Each queen builds a small nest, in a hole in the ground or in a tuft of matted grass. The larvae which hatch from the eggs are fed progressively by the queen on nectar and pollen which she herself collects. The bees which emerge from these first cells are incapable of mating. These take over from the queen the duties of nest building, foraging for food and feeding her larvae. Towards the end of the summer a number of large female bumblebees which are sexually matured are produced and a number of males. The virgin queens and the males leave the nest in search of food and mates, the young queens of one colony mating with the drones of another. The young impregnated queens go off individually and remain quiescent until, in spring, they each attempt to found a new colony. See HUMBLE BEE.

On the d. of Theodosius the Great in A.D. 395, the Emp. was divided between his sons, Arcadius and Honorius. Arcadius took the E. portion. His cap. was Byzantium, hence the use of term Byzantine for the E. Rom. Emp. The Byzantine Emp. lasted over 1,000 years, and the last remnant vanished with the capture of Constantinople by the Turks in 1453. The more memorable names in the long list of Byzantine emperors are Justinian (527-565), the famous legislator; Isaac Comnenus, the founder of a dynasty which ruled from 1057-1185; and Michael Palaeologus, whose family retained the sceptre from 1261 until the end. Byzantine art is a fusion of the Rom., Gk. and Persian cultures. Its supreme achievements were mosaics and frescoes, but metal work, ivory carving and silk weaving were also developed. The ch. of Santa Sophia, Constantinople, is the greatest example of B. architecture and there are famous mosaics at Ravenna and Venice. Byzantine lit. is the medium through which classical Gk. lit. has been preserved to modern times. The capture of Constantinople by the Turks, and the consequent flight of Byzantine scholars was one cause of the Renaissance or revival of learning.

CANADA

A federal union of the provs. of Alberta, Brit. Columbia, Manitoba, New Brunswick, Newfoundland, Nova Scotia, Ontario, Prince Edward Island, Quebec and Saskatchewan; it also comprises the N.W. Territories and Yukon. Area of 31 million sq.m. of land and 4 million sq.m. of water stretches from latitude 42° to 70° N.; longitudinally it extends about 3,500 m. The pop. of 18,896,000 is mainly Brit in origin with 5 million Fr. speaking Roman Catholics. 24 million of other European origins, 66,531 Indians and Eskimos and 70,000 Asians. Discovered by Cabot in 1497, the Fr. took possession in 1534; the first permanent European settlements were Port Royal, Nova Scotia, 1605, and Quebec, 1608. Canada grew from a number of isolated settlements: (i) The Fr. penetrated along the St. Lawrence, exploring and organising the fur trade. (ii) The E. shores were of interest for fishing and naval purposes; Newfoundland was colonised by the Brit. in the 17th cent., Nova Scotia (then called Acadia), by the Fr. In 1763 the latter was ceded to Brit. and in 1784, New Brunswick was separated from it. Prince Edward Is. taken from the Fr. in 1758, was separated from Nova Scotia in 1769. (iii) Th. Hudson's Bay Co., from 1670, founded forts along Hudson Bay shores. (iv) Capt. Cook obtained furs from Vancouver Is. 1778, whereupon the Hudson's Bay Co. obtained a concession, the Is. became a Crown Colony in 1819. (v) After the Amer. War of Indep. loyal refugees settled in Ontario. Ontario was first known as Upper Canada to distinguish it from Lower Canada (Quebec). (vi) In 1812 the Red River Settlement was founded. Lower and Upper Canada and the Maritime Provs. were federated to form the Dominion of Canada in 1867; in 1869 the N.W. Territories were bought

from the Hudson's Bay Co. and out of them the prov. of Manitoba was formed in 1870. In 1871 Brit. Columbia agreed to join the Dominion on condition that a railway was built to link her with the E. This, the C.P.R., was completed from Vancouver to Montreal in 1885. By 1905 the great influx of settlers justified the formation of 2 new provs., Saskatchewan and Alberta. In 1949, Newfoundland and Labrador became the tenth province. Canada may be described in 5 major regions: *The Atlantic Provs.*, to which Newfoundland may be added, are mountainous. Offshore, the shallow waters provide important fisheries. Rainfall is abundant in summer and snow in winter; the summers are warm, winters cool or cold. Mixed farming is carried on. Prince Edward Is. is intensively farmed. Lumbering is important. Coal is mined, chiefly in Cape Breton Is. and Newfoundland has large iron ore deposits. *Brit. Columbia*, about 3,000 m. W. of the Atlantic Provs. is also mountainous. The most lofty ranges are the Rockies, with numerous peaks over 11,000 ft. The climate is not unlike that of the Brit. Is. modified at high altitudes. The valley floors produce hay, oats, wheat and potatoes, and cattle, poultry and pigs are kept. Fruit is grown. *Brit. Columbia* produces over half the timber of Canada. Next to Ontario, Brit. Columbia is the chief mining prov. of Canada. Oil is available by pipeline from Alberta; pulp, newsprint and plywood manufacture have been extended. Between these coastal areas the principal inhabited regions are the *St. Lawrence* and *Great Lakes Lowlands* and the *Prairies*. The former lie S. and S.E. of the Canadian Shield. A narrow belt of lowland extends along the St. Lawrence from Quebec, broadening between Lakes Ontario, Erie and Huron. Mixed farming is general. Cheese is exported. Fruit is grown. The area lacks coal, yet developed as the first manufacturing region of Canada. Raw materials, timber, minerals and grain pass through en route for world markets. Hydro-electric power, developed at Niagara and from the rivers flowing from the Shield to the St. Lawrence, is widely distributed; the Great Lakes and their associated waterways provide cheap transport and direct connections with ocean transport by the St. Lawrence Seaway. Westwards, the coniferous forest is broken by bare rocky surfaces; the climate becomes increasingly severe. Beyond Winnipeg are the *Prairies*. The first section is the Manitoba, or Red River, Lowland. Extreme temperatures are experienced, ranging from well below 0° F. to about 75° F. Precipitation is slight but falls mainly in spring and early summer. This is now one of the great wheat growing areas of the world. In S. Alberta, irrigation is necessary and cattle ranching and sheep grazing replace extensive wheat cultivation. The *Prairie* region is also rich in minerals, bituminous coal, lignite, oil and natural gas are all important. N. of these populated areas lies a vast area of coniferous forest and lakes, beyond which again is tundra. This is sparsely populated, lacking agricultural possibilities, but rich in other resources. The forest is exploited for pulp and constructional timber, trapping remains important and there is a wide variety of minerals between the Great Bear, Great Slave and Athabaska Lakes in the W. and Labrador. A large percentage of the world's uranium reserves are found in the mines of N. Ontario. Canada owes its existence to the development of E.-W. rly. links, counterbalancing the strong natural attractions between each of the original separate colonies and the adjacent Amer. States. In the course of their construction many minerals were discovered; settlement of the prairies based on the growing of wheat for export depended on rail transport. The St. Lawrence, Ottawa and other rivers, the Great Lakes and the many other lakes, provided Canada with fine natural

waterways which were improved by canal links. In 1959, the St. Lawrence Seaway between Montreal and L. Ontario was opened. Internal air lines are of great value in reducing effective distances and thus further promoting unity in Canada. The principal exports of Canada are wheat and wheat flour and wood pulp, sawn timber and newsprint. Minerals are less important. **Government.** The constitution is modelled on that of Brit.; the Queen is represented by a Gov.-Gen. and there is a Senate and House of Commons. The Gov.-Gen. appoints Lieut. Govs. in each Prov.; provincial self-govt. in most local matters is the rule.

CANAL

COAL

Carbonaceous material forming stratified deposits in the earth. It represents the remains of ancient land vegetation which has undergone slow chem. change, reducing the oxygen and increasing the carbon content up to 75-90 %. Common coal is black, and contains 75-85 % of carbon. Steam coals are less bituminous, burn well with a large flame and little smoke. Anthracite, the most mineralised of coals, consists almost entirely of carbon. There are believed to be enormous deposits untouched in Canada, S. Africa, China, Japan and elsewhere. Coal has been worked in Eng. since Rom. times, but it was not until end 18th cent. that it became the basis of Brit. industry. At that time, output was 10,000,000 t.; in 1949 c. 215,124,000 t.; in 1962 c. 197,425,000 t. In 1946 the Coal Industry Nationalisation Act received the Royal Assent and the Nat. Coal Board was instituted, 1946, to administer the nationally-owned mines. Coal-gas is obtained as one of the products when coal is heated to about 1,000° C. in the absence of air. The illuminosity is due to the ethylene, and all of the components, except nitrogen, are readily inflammable. Coal gas usually has a calorific value of about 500 Brit. Thermal Units per cub. ft. When coal is distilled, volatile products evolve, leaving coke. Coal-gas and coal-tar are 2 of these. Coal-Tar, Dark, viscid oil. Benzol is obtained up to 140° C. Two more redistillations, up to 170° C. produce solvent and burning naphtha. From

170°-230° naphthalene and carbolic acid are given. From 230°-270°, creosote oil and lubricating oil are formed, and later, anthracene oil, anthracene, lamp-black, pitch and coke. These are used largely in the making of drugs, perfumes, explosives, dyes, disinfectants, and fuel for internal combustion engines.

COALITION

In politics, a working arrangement between two or more parties, made either to carry on the govt. or to challenge the party in power. COMEDY

Strictly, a form of drama evolved in early 5th cent. Gk. 'Comedy' (5th cent. B.C.; Aristophanes) is 'regely social satire'; 'Middle Comedy' (4th c.), myth burlesque; 'New Comedy' (from 20 B.C.; Menander, imitated by the Rom. Plautus and Terence) has a love-motive, and many stock characters and situations. In M.A. it meant a story beginning sadly, ending happily, e.g. *Divine Comedy*.

COMET

(1) Luminous celestial body moving about the sun. Bright comets contain a nucleus, an enveloping haze or coma, and usually a tail of luminous matter. Some return at calculable intervals, ranging from the 34 yrs. of *Encke's* to the 76 yrs. of *Halley's*; others, moving parabolically, may never return. (2) Earliest Brit. passenger steamship. Built by Henry Bell (1767-1830) at Greenock in 1811, it plied between Glasgow and Greenock.

COMET

Originally the name of the de Havilland D.H. 88 racing aeroplane which in 1934 flew from Mildenhall to Melbourne in 71 hrs., it was later applied to the same company's D.H. 106 jet airliner which first flew in July 1949. Unfortunately, in Jan. and April 1954, Comets vanished without trace off Italy, and investigations showed evidence of metal fatigue (q.v.). After extensive redesign the Comet 4 entered the B.O.A.C. service in October 1958, and versions of this aircraft are now widely used.

COMFREY

[kum'-] Genus of rough, erect, tuberous-rooted perennial herbs of the Boraginaceae, native to Europe and W. Asia. The common Brit. comfrey (*Symphytum officinale*) has been naturalised in N. Amer.; the other (*S. tuberosum*) is cultivated ornamentally.

COMMONS

In Brit., land that is owned by the public. Orig. land on which villagers had right of grazing, attached to their village or manor. In 15th and 16th cents. much was enclosed by landowners; in 18th cent. by Acts of Parl. In 1866 enclosures were forbidden in the London area, and in 1876 elsewhere. Today commons are supervised by the local authorities.

COMMONS, House of

In Brit. and Canada the name given to the House of Parl. elected directly by the people. In Eng., the House began in the 14th cent., when the representatives of the counties and boroughs separated themselves from the Lords, and were called the Commons. By reason of their control of finance, the Commons gradually asserted themselves, fighting a long struggle with the Crown in the 17th cent. and later with the Lords, culminating in the Parl. Act of 1911. For practical purposes the Commons are omnipotent in legislation. Only a defeat in the Commons can force a Govt. to resign. The number of members in the Brit. House of Commons was at one time 670; in 1950 after a redistribution, 625 members were returned, and after the 1955 redistribution, the number was increased to 630. Women have been eligible for election since 1918. The Pres. of the House is the Speaker. The control of business is in the hands of the P.M. and his assistants.

COSMOLOGY

The cosmologist takes over from the astronomer and endeavours to fit the facts revealed by astron. (q.v.) into his conception of the universe, but this is now conceptual and mathematical. Einstein's Cosmos is finite and curved in a 4-dimensional manner into a closed spherical structure. A rocket travelling in a 'straight line' in space would never reach a boundary, and would not go on into infinity, but would eventually return to the point from which it started. The alternative theories are (1) that the universe is expanding. This was asserted by Eddington, who reasoned that in future ages the galaxies would be so remote from one another that the Cosmos would cease to exist as a unity. (2) The theory advanced by Richard Tolman, working from Lemaitre's theory that a universe of constant size would be unstable, and having affinities with the Ancient Hindu teaching of the 'Great Breath', is that there are 2 fundamental forces at work in the universe, one of *repulsion*, from the orig. explosion of a single compact super-atom, and one of *attraction* deriving from clots of matter in space, and that expansion will go on until the forces balance each other. The universe will then fall in upon itself with increasing velocity until another super-atom is created and the process starts all over again.

DARWIN, Charles Robert
(1809-82) Eng. naturalist. B. Shrewsbury; educ. there and at Edinburgh and Camb. In 1839 he mar. Emma Wedgwood. The next 20 years were spent in scientific research. The results were pub. in *The Origin of Species*, 1859, and in *The Descent of Man*, 1871. He believed that man is related to the lower animals and that in animal life there is a struggle for existence which leads to the natural selection of those qualities most useful to continue the life of the species. This is the doctrine of the survival of the fittest, or natural selection. Four of his 5 sons became prominent in the world of science. Sir George Howard D. (1845-1912) was Prof. of Astron. at Camb. (1883-1912). Sir Francis D. (1848-1925) was reader in botany at Camb. Leonard D. (1850-1943) became pres. of the Eugenics Soc. Sir Horace D. (1851-1928) became the head of a scientific instruments firm at Camb. Charles Galton D. (1887-1963) son of Sir George Howard D. was prof. of Nat. Phil. at Edinburgh Univ. 1923-36.

DARWIN, Erasmus
(1731-1802) Eng. scientist. His most noted scientific work was his *Zoonomia*, 1794. He anticipated much of the Lamarckian idea of evolution. Grandfather of Charles Darwin and Francis Galton.

DATE
Fruit of a tree of the palm order, native to N. Africa and S.W. Asia (*Phoenix dactylifera*).

Cultivated in India. It is straight-stemmed, with feather-like leaves, the male and female flowers being on separate trees. It grows to 100 ft. and bears dates in bunches. The natives of N. Africa use the date-palms for building huts, for fibre cloth, ropes, etc.

DATeline, International
A hypothetical line which follows the meridian of long. of 180° from Greenwich, except where it diverges to include the Aleutian Is. with Alaska, and some S. Sea Is. with Australia. It is used by mariners and airmen as the most convenient place to adjust their clocks, the reason being that, as compared with sun time, a day (one hour for every 15°) is lost in making a complete circumnavigation of the globe.

DAUPHIN
[daw'-fin] Title borne by the eldest son of the kings of Fr. Formerly the title of certain nobles, one of whom, the Dauphin of Vienne, sold his lands to the prince who became King Charles V. He gave these lands to his son, and from that time the eldest son was called the Dauphin. His inheritance, the district round Grenoble, became known as Dauphiné, now the depts. Isère, Drôme and Hautes Alpes.

DAVENANT, Sir William

chio and later was in Egypt as an engineer. In 1500 he was architect and engineer to Cesare Borgia in Florence, and in 1506 he went to Fr. He d. near Amboise. Among his paintings are *The Last Supper* and *La Gioconda* (the Mona Lisa). In physics he was probably the first to understand the principle of inertia. He understood the wave nature of sound and light and appears to have understood the circulation of the blood (a cent. before Harvey).

DAVIS, Jefferson

(1808-89) Amer. statesman and Pres. of the Confederacy. He was in the Army (1828-35), and in Congress (1845). He served in the Mexican War (1846-7), and became a Senator; Sec. for War (1853). In 1861, when the S. States seceded, he was elected their Pres. When the war ceased he was accused of treason and imprisoned, but released in 1867.

DAVIS, John

(c. 1550-1605) Eng. navigator sometimes called John Davys. In 1585-6 and 7 he went in search of the N.W. Passage. Unsuccessful, he discovered the Falkland Is. (1592). He invented a quadrant. *Davis Strait*, the channel connecting Baffin Bay with the Atlantic is named after him.

DAVIS CUP

Colloq. name for *Dwight Davis International Bowl*, a lawn tennis trophy, competed for annually. Presented by Dwight Hilley Davis (1879-1945) in 1900. He took part in the first two contests.

DAVOS

[dä'-v] 2 resorts in Grisons canton, Switzerland, in the Laffdwasser Valley (5,150 ft.).

DAVY, Sir Humphry

(1778-1829) Eng. chemist. He investigated the properties of gases, and discovered laughing gas (nitrous oxide). Prof. of chemistry at the Royal Inst. London, 1802. In 1810 Davy demonstrated the true nature of chlorine, and his discovery by electrolytic methods of the metals sodium and potassium was followed by the isolation of boron, and the invention of the Davy safety lamp. He was knighted (1812), received a baronetcy (1818) and (1820) was made pres. of the Royal Society.

DAY-LEWIS, Cecil

(1904-) Eng. poet. Exhibitioner at Wadham Coll. Oxford. Clark Lecturer at Camb, 1946 (*The Poetic Image*); Prof. of Poetry at Oxford, 1951-6. He ed. *Oxford Poetry*, 1927, with W. H. Auden. Pub. 10 vols. of poems, 1925-48, including *Transitional Poems*, 1929. He tr. Virgil's *Georgics* (1940). Created Poet Laureate (1968) in succession to Macneil.

DAYS OF THE WEEK

A day (in Solar time) is the time taken by the earth to make one revolution on its axis. A day begins at midnight and is divided into 24 hours, each of 60 minutes, each minute containing 60 seconds. The hours from midnight to noon, when the sun crosses the meridian, are designated A.M. (*ante meridiem*); those from noon to midnight P.M. (*post meridiem*). A modern practice is the use of the 24 hour clock on the basis of which the hours are numbered 0 to 23 from midnight to midnight. The week is a period of seven days. Sunday (Rom. *Sol*), Monday (Rom. *Luna*), Tuesday (Scand. *Tiu*, the god of war), Wednesday (Scand. *Woden* or *Odin*), Thursday (Scand. *Thor*), Friday (Scand. *Frig*, wife of Odin), Saturday (Rom. *Saturnus*).

DEACON

In the Anglican and Rom. Ch. a member of a clerical order. The 1st deacons, of whom Stephen, the 1st Christian martyr was one, were appointed soon after the d. of Jesus Christ (*Acts*, 6). In the C. of E. a man cannot be ordained deacon until he is 23 years of age.

In certain Nonconformist chs. deacons are laymen elected to manage the affairs of the ch. The office of *deacons* existed in the early ch. They are now found in the C. of E. and various Nonconformist chs.

DEAD MEN'S FINGERS

(*Alcyonium digitatum*) A zoophyte frequently cast up on Brit. coasts. The pink, spongy-looking masses are studded with tentacled polyps. Name also refers to the Spotted Orchis, *O. maculata*, or Marsh Orchis, *O. latifolia*, with pale hand-like tubers.

DEAD NETTLE

(*Lamium*) Genus of annual and perennial hairy herbs of the Labiatae, native to temp. Europe, Asia and N. Africa. The commonest Brit. species are the red flowered *L. purpureum*, white flowered *L. album*, yellow flowered *Galcabdolon luteum*, the henbit, *L. amplexicaule*, and the spotted *L. maculatum*, with striped leaves.

DEAD SEA

Lake of the M.E. 47 m. long, almost surrounded by Jordan territory, with the S.W. shore forming the Israeli boundary. It receives the waters of the Jordan, and lies c. 1,380 ft. below sea level. There is no outlet to the sea, and the water contains a concentration of mineral salts. *Dead Sea Scrolls*, see HEBREW.

DEADLY NIGHTSHADE See BELLADONNA.

DEAFNESS

Lack of hearing which may be partial or complete. Among the common causes of deafness is wax in the ear. In all cases of deafness medical advice should be obtained. *Occupational deafness* occurs in certain industries such as boiler-making, coopering, latiss workers and artillerymen and is due to degeneration of cochlear apparatus. *Word deafness* is due to disease affecting brain in the area controlling sight and hearing. *Deaf Mutilism*. Condition in which speech is absent owing to a high degree of deafness, congenital or acquired. Is usually due to abnormalities of the inner ear although a few cases are assoc. with brain disease. Educ. of the child is of great importance either by lip reading or finger spelling. Educ. of deaf mutes is compulsory.

DEAN

Eccles. and coll. official. Most of the Eng. caths. have a dean who is the head of the chapter and responsible for looking after its affairs. In the Oxford and Camb. Colls., the dean is responsible for matters of discipline.

DEATH

End of physical life. Legally d. must be certified by a med. practitioner after exam. of the body. He then issues a d. certificate. In cases of sudden d., or where violence is suspected, an inquest must be held by the coroner in Eng., or an inquiry by the Procurator-Fiscal in Scot. Before disposal of a body the d. must be registered with the registrar of births, marriages and deaths. *Death duties* are duties charged on the property left by a deceased person. *Death*

114 • DEATH WATCH BEETLE

Rate. Annual number of deaths per 1,000 of a country's population.

DEATH WATCH BEETLE

A small beetle (*Xestobium rufohilosum*) which lives in wood, and makes a ticking noise.

DEBRET, John

[debret] (c. 1752-1822) Eng. publisher. In 1781 he took over the business of John Almon, who had already issued, 1754, a *New Peevage*. This was turned by Debrett into *Debrett's Peerage and Baronetage*.

DEBUSSY, Claude Achille

[débú-sý] (1862-1918) Fr. composer. His 1st work of importance was a setting of a Fr. version of Rossetti's *Blessed Damozel* (1888). His music can be regarded as the counterpart of Impressionism in painting. His works include the opera *Pelléas et Mélisande*, and many orchestral pieces.

DECIMAL

In arithmetic, a fraction having 10 or some power of 10 as a denominator. It is represented by a point, thus .4 means 4-tenths and .625 means 625. To divide or multiply by 10 and multiples of 10 the point is moved in one way or the other, and if necessary noughts are added, thus 33.412 divided by 1000 is .033412. The decimal system of coinage has been adopted in many countries. There are proposals to introduce it into Brit. when a suitable basis has been worked out. A standard unit is taken for reference, such as the franc in Fr. and the dollar in the U.S.A. In the metric or decimal system of weights and measures the metre is the standard unit of length, the gramme of weight and the litre of capacity.

DECLARATION

Formal statement of any kind. Outstanding examples are the Declaration of Indulgence, 1687; the Declaration of Rights, 1689; the Amer. Declaration of Indep., 1776 (q.v.); the Declaration of Paris, 1856, and the Declaration of London, 1908-9, both on maritime warfare. In Eng. law, solemn declarations before authorised persons sometimes replace affidavits. A death-bed declaration respecting cause of d. may be valid evidence. In Scots law prisoners may make signed declarations before magistrates within 48 hours of arrest. Declarations of war nowadays usually follow initial acts of hostility. **Declaration of Independence.** The formal declaration by the 13 orig. Amer. colonies of their polit. separation from Gt. Brit. adopted July 4, 1776. Drafted by a committee of 5, including Thomas Jefferson, Benjamin Franklin and John Adams. July 4 is now the chief Amer. patriotic holiday, known as *Indep. Day*. See UNITED STATES.

DECREE

DIGESTION

The process of preparing food for absorption from the bowel and subsequent utilisation and storage by the body. The process may be divided into 3 stages (1) that occurring in the

mouth, or salivary digestion (2) that occurring in the stomach, or gastric digestion, and (3) that occurring in the small bowel, or intestinal digestion. In the mouth, food mixes with salivary juices which contain ptyalin, that acts on the starch particles and changes them to sugars. The chewing action of the jaw and tongue breaks up the food into smaller pieces. The stomach or gastric juice containing hydrochloric acid acts on the proteins producing amino-acids. In the small bowel the bile, pancreatic and bowel juices complete the digestive process. Bile emulsifies fat. Pancreas produces ferments (lipase and trypsin), the bowel juice the *succus entericus*. As the food moves into the distant parts of the bowel absorption of the material now called chyme begins. When the food residue reaches the large bowel or colon, only water and waste products are left. Sugars, salts and amino-acids are absorbed into the blood and carried to the liver where they are stored.

DIGITALIS

[di-tā'-] Genus of plants belonging to the family Scrophulariaceae, native to Brit., Europe, N. Africa and Asia. The foxglove, *D. purpurea*, is a well-known species. DRUG

Any substance of vegetable, animal or mineral origin used to compound or prepare a med. preparation. Opium is obtained from the unripe capsules of the poppy. Quinine comes from the bark of the Cinchona tree, digitalis from the leaf of a species of foxglove. Other drugs are obtained by chem. processes; of this group aspirin, menthol and the sulphonamides are every day examples. Antibiotic drugs. The latest group to be introduced for treatment of illness in man include *penicillin* and *streptomycin* which are extracted from cultures in which those moulds grow. Many drugs in use today are harmful poisons and are carefully controlled by various laws passed by Parl. and by Internat. bodies. See POISON. Drug Addiction. There is always the possibility of addiction when drugs with central nervous activity (i.e. affecting the brain itself) are taken for any reason. Opinions differ on what causes susceptibility to addiction; lack of maturity and intelligence have been suggested. Opiates, which cause euphoria, are particularly liable to cause it: as for example the groups which are derivatives of morphine, cocaine, amphetamine, barbiturate, etc. The symptoms produced by such drugs include slowing of reaction times, impaired motor co-ordination and personality changes. Usage may be intermittent or continuous and the need to continue varies in intensity: it is overpowering with the morphine

group. Withdrawal of the drug, in addition to causing craving, can lead to abstinence illness with symptoms including nausea, anxiety and sometimes convulsions. Treatment involves weaning the patient from the drug and providing psychotherapy to treat the mental disturbances of which drug addiction was the expression, in order to minimise chances of relapse.

DRUID

An echo occurs when sound can reach the listener by 2 paths of different length, thus a handclap made in front of a cliff will be heard first by sound which has travelled directly from the hand to the ear, and later by sound which has travelled to the cliff and has been reflected from it. If the cliff is 100 ft. away, the interval between the sound and its echo will be $\frac{100}{1125} = 0.088$ sec (since the speed of sound is about 1,125 ft. per sec and the extra distance travelled by the sound forming the echo is 200 ft.). Echo Sounding. Method by which ships determine the depth of water in which they are sailing. An instrument records the time taken by a sound wave to travel to and return from the sea bed.

ECLIPSE

In astronomy, the obscuring of one celestial body by another. Eclipses are either partial or total. Partial eclipses of both the sun and the moon occur every year; total eclipses occur about once every 2 years. A solar eclipse can occur only at the time of the new moon, and even then, only when it is near one of the nodes of the ecliptic. The laws of solar and lunar eclipses were known to the astronomers of ancient Egypt. Only 2 total eclipses of the sun were visible in the 18th cent. None were visible in the 19th cent. A number fall in the 20th cent. including (1) that of June 30, 1954 which was a total eclipse in the track of the moon's shadow where it crossed the U.S.A., Canada, the Shetlands, Norway, Sweden, and Russia, and (2) that which will occur on July 10, 1972, and will be visible in N. Canada and Alaska.

ECONOMICS

Orig. the science of household management. The term polit. economy came into use to denote the production, distribution and consumption of wealth. This was first discussed in Fr. early in the 17th cent. The foundation of the science is usually attributed to Adam Smith, who, in 1776, pub. *The Wealth of Nations*. This was followed by the writings of John Stuart Mill, David Ricardo, and many Fr. and German economists. Early economists regarded polit. economy as free from all social and ethical considerations. Towards the end of the 19th cent. economists began to take account of educ. and housing, even pleasure and recreation. Polit. economy became economics and its scope was widened. In the 20th cent. the study was revolutionised by Lord Keynes. Economics is a subject of study at all univs. The London School of Economics is an important centre.

EDUCATION

Term for mental and physical training, esp. of the young. Modern educ. began with the Gks. With the estab. of Christianity in Europe, educ. became the province of the Ch. The Ch. was responsible for the early schools and univs. Educ. was given to a very few boys by monks in schools connected with the monasteries. The Renaissance gave considerable impetus to educ. and the 15th and 16th cents. witnessed the founding of many univs. and schools. In the 19th cent. educ. was taken over by the State. Women were included. Elementary education was distinguished from secondary. Technical educ. was introduced. The old univs. were reorganised, and new ones were created. Brit. educ. was made compulsory by an Act of 1870, and schools, called board schools, later council schools, were set up by the side of the existing ch. schools. For the wealthier classes, the public school system was extended. In 1891 educ. in the elementary schools was made free; prior to this, payment had been based on the parents' income. In 1918 the leaving age was raised to 14, in 1930 to 15 (enforced 1947). **Elementary Education.** After the Nursery School, the child will proceed to the Infant and Primary School and thence in some cases to the Secondary Modern School, where he will remain until he is 15 or older. Facilities are provided for further technical and commercial training, and evening classes may be attended. The Secondary Grammar School is attended after the Primary School from the age of 11 or more. Scholarships are now freely obtainable by exam. which will pay the full fees for secondary educ. to the age of 19, and in special cases some contribution towards maintenance. Children are accepted in preparatory and private schools at 5-7 years of age, and they usually remain until they are 12 or 13. **Public Schools.** For entrance to most of the public schools it is necessary to arrange the matter many years before the child is of age. The age for entrance to a public school is usually from 12 to 14 years, and the leaving age is 18 to 19. **Preparatory Schools.** The child for whom a Public School educ. has been planned will usually begin in either a private or a preparatory school. Pupils in Secondary Schools in Eng. and Wales may sit for exams leading to the General Certificate of Education (G.C.E.), papers being set at 3 levels, ordinary, advanced and scholarship. This is being introduced in Scot. After leaving school specialised training may take the form of an apprenticeship or attendance at Business, Technical or Training Colleges, in some of which a degree may be taken for such purposes as teaching. The Universities. Every univ. publishes an annual 'calendar', which contains full particulars of entrance, scholarships and tuition. 2 important White Papers on educ. were pub. in 1963. The Newsom Rep. on Secondary Educ. recommended raising the leaving age to 16, among other things. EDWIN

(c. 585-633) King of Northumbria, son of Ella, King of Deira. Driven out by the King of Bernicia, in 617 he killed his foe in battle, and united Bernicia and Deira into the Kingdom of Northumbria. He mar. Ethelburga of Kent, and in 627, under her influence and that of Paulinus, became a Christian. He was killed in battle against Penda, King of Mercia.

EEL

Soft-rayed fishes with long snake-like bodies. They lack ventral fins and external scales. Widespread in temp. fresh waters, the common European Eel, *Anguilla vulgaris*, is greenish-brown and silvery beneath. The female, which anglers call the Sharp-nosed, measures 3-4 ft., the male, called the Broad-nosed, is much smaller. The females inhabit rivers and ponds, where they live for many years. Eventually

they descend seawards and spawn in the deep waters off Bermuda; the males do not return. The eggs produce tiny ribbon-like creatures. These larval forms, from which eel fry are derived, float E. in the Gulf Stream. The leptocephali grow in transit and change in form to cylindrical eelers when entering the river estuaries. The eelers ascend and establish themselves in the rivers and ponds where they grow to the adult fish.

EGG

A single cell which by dividing builds up the whole structure of a living organism. They remain inactive until fertilised by union with a male gamete cell, except in parthenogenetic animals, (e.g., Aphids), where they proceed to divide as soon as they are fully mature. Its size is governed by the amount of nutritive yolk it contains and this is dependent on the method of feeding the developing embryo. Thus, in all mammals, with the exception of the platypus and the spiny ant-eater, the egg is minute, yolk is wanting and the embryo early develops in intimate connection with the maternal circulation. The young develop in the body of the mother and are born. In most other animals the more or less yolk-laden eggs are shed after fertilisation. The embryos grow at the expense of the food material available as yolk and they finally hatch. Most of the reptiles, including crocodiles, lay eggs, as do all birds. Many eggs are enclosed in a hard shell, but those of fishes, frogs, etc. that are laid in the sea or in wet places, are not. The most familiar kind of egg is that laid by the bird. These vary much in size and colour, but all possess the hard shell. Brit. law forbids the taking of the eggs of wild birds at certain seasons. The egg of the ordinary fowl is a popular and nutritious article of food. At Milford, Surrey, is a farm where, under the auspices of the Nat. Utility Poultry Soc. egg-laying tests are held, to determine the laying qualities of the various breeds.

EGGLANTINE

Poetic name for the sweet briar (*Rosa eglantaria*). It is of bushy growth, the branches being thickly set with hooked prickles and bristles; the flowers are small and pink, and the foliage fragrant.

EGRET

[Ē-] Small white herons, with long, narrow, loose-webbed plumes. Populate inland waters, esp. in India, and are also found in S. Europe and Asia.

EGYPT

Repub. of N.E. Africa, bounded by Libya and the Sudan, with coastlines on the Medit. and Red Seas. The only fertile area is that through which the great rivers flow, some 13,600 sq.m., for rain is infrequent. The Nile is over 4,090 m. long with a delta mouth on the Medit. and the Arabian and Libyan deserts to E. and W. By means of irrigation cotton, rice, sugar cane, maize, cereals, beans and lentils are grown.

Oil has been found in Sinai. Manufactures include textiles, pottery, leather and luxury goods. Cap. is Cairo. State religion is Mohammedanism. Area: 386,000 sq.m. Pop. 26,059,000. Egypt had a high degree of civilisation by c. 5510 B.C. The next 4,500 years up to the d. of Cleopatra saw the flourishing of a unique culture symbolised by such great works as the pyramids and the temples of Karnak and Luxor. After 30 A.C. Egypt became a Rom. prov. and in 642 was conquered by the Arabs. From 1517 until 1798 it was a prov. of Turkey. Napoleon was defeated by the Brit. who restored Turkish rule. This was confirmed between 1841 and 1875 and the Suez Canal was built by Brit. and Fr. enterprise. A further period of unrest terminated in 1905 when Brit. rule was accepted by the European powers. In 1922 Egypt was granted indep. under King Fuad I, but Brit. troops remained until the Treaty of Alliance, 1936, after which they stayed only in the Canal Zone. In Oct. 1951, c. 6,000 Brit. troops flew into the Canal Zone. The Egyptian Cabinet, under Nahas Pasha, decided in Dec. to dismiss all Brit. officials in the Egyptian Govt. service. Relations with Brit. remained strained and in May of that year Brit. Govt. claimed £1,750,000 compensation for damage to property and deaths of Britons in Cairo riots. On 29th May Hussein Sirry Pasha was appointed P.M. after resignation of Hilaly Pasha, who was later recalled and agreed to form Govt. on 21st June. Two days later the Egyptian Govt. resigned as a result of a coup d'état by the army led by Maj.-Gen. Neguib Mohammed which occupied Cairo to end instability of gov't. and corruption. King Farouk was forced by the Army to abdicate in favour of his infant son Ahmed Fuad. In Sept. Aly Maher resigned and Neguib formed a new Ministry. All polit. parties were dissolved in Jan. 1953 and the duration of Neguib's special powers was extended. On Feb. 12th an Anglo-Egyptian agreement was signed concerning the future of the Sudan. In June, 1953, Egypt declared herself a repub. and Neguib became P.M. and the first Pres. He retained these positions until Feb. 25th, 1954, when, on failing to obtain the power of veto over the Revolution Council decisions, he was forced to resign all his official posts. Col. Nasser assumed full control, becoming Prime Min. Demonstrations and riots resulted and Gen. Neguib was restored as Pres. of the Egyptian Parl. Repub. with Col. Nasser still in the posts of P.M. and chairman of the council of revolutionary command. On the 6th March, Nasser became Milit. Gov. of Egypt and the milit. régime of Egypt undertook to return to parl. gov't. as soon as possible, and intimated their readiness to resume talks on the Suez Canal issue if the Brit. Govt. was willing. At the end of March the Egyptian Govt. cancelled their earlier statement permitting the restoration of polit. parties. After prolonged negotiations with the Brit. Govt. an agreement on the Suez Canal issue was signed on 19th Oct. 1954. Brit. evacuation of the Canal Zone was to be completed by June 1956. Former Brit. bases in the zone were to be kept in efficient working order. This agreement was to last for 7 years, the position to be reviewed in the final year. Gen. Neguib was removed from the office of President in 1954 by a mil. coup. In 1956 Nasser became Pres. and soon announced the nationalisation of the Canal. } remained adamant despite French and British pressure and losses to the Israeli army. A U.N. police force was finally accepted by both sides and a settlement was reached. In Feb. 1958 Syria and Egypt announced their union under the name of United Arab Republic, however, in 1961 Syria seceded, but Egypt retains the name. In June 1967, Egypt closed the Strait of Tiran to Israeli shipping and demanded the withdrawal of the U.N. troops in Sinai. In spite of support from the

U.S.S.R. and Arab countries she was driven beyond the Suez Canal within 5 days. The U.N. established a cease-fire, but the situation remains tense and there have been outbursts of shelling since. See SUEZ CANAL, UNITED ARAB REPUBLIC.

Egyptology. Study of Egyptian antiquities. Modern archaeological investigation began with the work of Rhind and Mariette in the mid-19th cent. and was developed by Naville, Maspero, Petrie, Breasted, Budge and other scholars. The work consists of the excavation of tombs, temples, towns, etc., the trans. of papyri and reconstruction of the religious, polit., social, economic, literary and artistic life of Ancient Egypt. Of the many tombs excavated throughout the years, almost all had been plundered. The exception was that of the 18th dynasty Pharaoh Tut-ankhamen (q.v.). The Egypt Exploration Soc., founded 1882, the Brit. School of Archaeology in Egypt, founded 1896, and learned socs. and univs. in Europe and the U.S.A. further Egyptological research. See AKHENATEN, PYRAMIDS.

EIDER DUCK

(*Somateria*) Sea ducks which line their nests with down. Dwelling on N. Atlantic coasts, the Common Eider Duck, *S. mollissima*, lays green eggs in nests on the ground. The down, valued for stuffing quilts, etc. is collected in Iceland and other localities. Eider ducks breed in the Farne Is., Hebrides and Donegal.

EIFFEL, Alexandre Gustave

[ef-fel'] (1832-1923) Fr. engineer. B. Dijon, he was one of the 1st engineers to use compressed air caissons for building bridges. His works include the Eiffel Tower, completed 1889.

EIGG

[egg] Is. of the Inner Hebrides, in Inverness-shire, half-way between the Is. of Rhum and the mainland.

EINSTEIN, Albert

(1879-1955) German scientist, b. Ulm and educ. Munich and Zurich. He was appointed Prof. at Zurich Univ. (1909). In 1915 he produced his theory of relativity. Awarded the Nobel prize for physics 1921. Became Prof. of Theoretical Physics at the Institute for Advanced Study, Princeton, U.S.A. He showed that energy and matter and space and time are part of a single reality. In 1949 he announced that he had developed a unified or generalised field theory which integrates gravitation and electro-magnetism. See *The Meaning of Relativity*, 1953.

EIRE See IRELAND, REPUBLIC OF.

EISENHOWER, 'Dwight David

(1890-1969) Pres. of U.S. 1952-60. He graduated from U.S. Milit. Acad. W. Point, 1915, and after Staff appointments was given command of the U.S. forces in Brit. 1942. Under his supreme command, 1944-5, the Allied Exped. Forces invaded Normandy from Eng., liberated German-occupied countries, and defeated Germany on her own soil. He became Commander Amer. Occup. Zone, Germany, 1945; Chief of Staff, U.S. Army, 1945-8; Supreme Comdr. N. Atlantic Treaty Forces in Europe, 1950-2; retired 1952. Elected Pres. 1952-6, 1956-60.

EISTEDDFOD

[i-steth'-vöd] Welsh bardic congress held annually in different towns for encouraging nat. music and lit. Sprung from the Gorsedd or Nat. Assembly, it is mentioned in early records. It was held in 1567, and has been held almost annually since 1819. The chief bard is crowned, and prizes awarded for choral singing, harp-ing, and lyrical compositions and essays.

EL ALAMEIN

[el-mān] Town of N. coast of Egypt, 70 m. W. of Alexandria, site of important World War II battle.³

EL GRECO

(Domenico Theotocopuli) (1542-1614) B. Crete. In c. 1566 he went to Venice and studied under Titian. He was profoundly influenced by Tintoretto and Michelangelo. He left Italy in 1576 and is next heard of in Spain in 1577, when he arrived in Toledo. Mainly a religious painter. He was hailed by 19th cent. experimental painters and has greatly influenced modern art.

ELAN

River of S. Wales, which rises in Cardigan-shire and flows into the Wye below Rhayader. The valley is now a reservoir supplying Birmingham.

ELAND

Taurotragus oryx. African antelopes. The largest, also called the Cape Elk, has a tufted forelock and can stand c. 6ft. at the withers. The screwlike horns occur in both sexes. Except on reserves in Natal the eland has disappeared from S. Africa. Herds still roam N. of the Zambesi.

ELBA

Ital. Is. in the Medit. Sea, 6 m. from the mainland. Porto Ferrario is the cap. Napoleon lived in exile from May, 1814 to Feb. 1815. Pop. 32,200.

ELBE

River of Europe, 706 m. long, rises in Czechoslovakia and enters the N. Sea near Cuxhaven. On it stand Prague, Dresden, Magdeburg and Hamburg.

ELBOW

Area of junction of the arm and forearm. Elbow joint composed of humerus, radius and ulna, as a bony skeleton with muscles, vessels and nerves. It is a combination of hinge joint and ball and socket joint.

ELBURZ

Mt. range of Persia, S. of Caspian Sea. Mt. Demavend, a dormant volcano, is the highest peak (18,600 ft.).

ELDER

Genus of deciduous shrubs and trees (*Sambucus*) allied to the guelder rose, native to all temp. regions except S. Africa. The common *S. nigra* is a rapidly growing tree, normally c. 10 ft. with cream-coloured flowers in flat clusters. The purplish-black berries are used for home-made wine.

ELDER

Ruler in some civil and ecclesiastical systems of govt. It is analogous to the Rom. senator and the Eng. alderman. The term was used by the Jews. In the Presbyterian ch. elders elected by each ch. form the ruling body. Members of the Corporation of Trinity House are called elder brethren.

ELEANOR

Name of 3 Eng. queens including the daughter of William, Duke of Aquitaine, who in 1137 mar. Louis VII of Fr. The marriage being dissolved, she became the wife of Henry II of Eng. She was the mother of Richard I and John, and d. 1204. Eleanor, a daughter of Ferdinand III, King of Castile. In 1254 she mar. Edward, later Edward I, and with him went on crusade. She d. 1290.

ELECTION

In politics, the act of choosing a representative or the holder of a particular office, usually by ballot. Elections are of several kinds. In one the electors choose their representatives directly; in another they vote for persons who in turn choose the representatives. The Pres. of the U.S.A. and the aldermen of Eng. county and town councils are examples of indirect election. A general election occurs when all the representatives on a body are elected at once; a by-election is held to replace a representative who has resigned or d. See VOTE.

ELECTRIC FISH

Three kinds of fish which store electrical energy and can release a sufficient potential at will to give a considerable shock under water. They are: the Electric Eel (*Gymnotus electricus*), a native of the rivers of Brazil and Guiana; Electric Catfish (*Malapterurus electricus*), a native of the larger African rivers; and the Torpedo, or Electric Ray, found widely in warm seas.

ELECTRIC POWER

The use of electrical energy for the production of heat or motion. Electrical energy can be easily transported over great distances. The power is usually produced in electric generators driven by either steam or water turbines. In the U.K. prior to 1947, electric power was generated and distributed to consumers by municipalities and companies. To link producers and distributors, the Nat. Electricity Grid was established under the Central Electricity Board in 1926 by Act of Parl. The electric power-producing industry was nationalised in 1947 under the Central Electricity Authority.

ELECTRIC SHOCK

To rescue: Disconnect current or short circuit wire by earthing with metal rod, and remove patient. If it is impossible to disconnect current, rescuer must be protected if possible with rubber gloves or a thick dry material such as sacking to cover hands. A dry board, piece of asbestos, rubber mat or dry sacking must be used to stand on.

ELECTRICITY

Among the ancients Gk. Thales recorded the attraction of light bodies by a piece of amber. In the 16th cent., Gilbert showed that other bodies also possessed this property. With the Leyden jar, invented 1745, came an understanding of the principles of induction, and 7 years later, Franklin demonstrated the identity of lightning with the electric spark. In 1800 Volta discovered a new source of electricity in the contact of 2 dissimilar metal plates immersed in acidulated water. This discovery led to the foundation of electro-chemistry. The work of Faraday, Oersted and Ohm resulted in the enunciation of the laws governing electrolysis, the principles of electro-magnetism and the idea of electrical resistance. The researches of Hertz and others have further increased our knowledge of the working of electrical forces, and the work of J. J. Thomson culminated in the discovery of the atomic nature of electricity and the elaboration of the electron theory.

ELECTROCUTION

Method of inflicting the death penalty adopted in the U.S.A. It consists of the passage of a current of electricity of very high voltage through the body of the criminal. It is claimed to be more nearly instantaneous and less revolting than other methods.

ELECTRON

Unit of electric charge. The electron may be regarded as a small particle of diam. c. 10^{-12} cms, mass 9×10^{-31} gram and negative charge 1.6×10^{-19} coulombs. A movement of electrons constitutes an electric current. See ATOM.

ELECTRONICS

Term for that branch of science which is based on the study of electro-magnetic waves. The thermionic valve, in one of its many forms, is the basic unit in all electronic apparatus. Recent developments include radar (q.v.). Some other applications of electronics are to be found in the electron microscope, the radio telescope (q.v.), television, dielectric heating, computers, etc.

ELECTRUM

An alloy of gold (70-80 %) and silver, used in jewellery.

ELEMENT

A material which cannot be decomposed by a

chem. process into other materials. 92 elements occur in nature and 9 more have been made in the laboratory.

ELEPHANT

(*Elephas*) Mammals including the largest existing quadrupeds. They are sometimes 8 to 11 ft. high. The nose forms a flexible, double-barrelled proboscis or trunk, often 4-5 ft., the sensitive tip of which can pick up small objects. The teeth include upturned upper incisors or tusks, the source of ivory. Large tusks may

African and Indian elephants

measure up to 9 ft and weigh 100 lb. The 2 living species of elephant are the Asiatic or Indian, with concave forehead and small ears, and tusks of female generally much reduced, and the taller African species with convex forehead and large flapping ears, in which the size of the tusks of both sexes is approximately the same. A dwarf race, standing 5 ft., occurs in the Congo basin. Tamed Asiatic elephants serve for ceremonial, timber and other transport, they rarely breed in captivity. White elephants are albinos.

ELEPHANTIASIS

[i-ti'] Disease characterised by swelling of a chronic type assoc. with increased fibrous tissue. Blockage of lymphatic vessels, abnormal conditions of the arteries and in trop. countries infection with parasitic worm called filaria are causes.

ELGAR, Sir Edward

(1857-1934) Eng. composer. Largely self-taught, he played the bassoon and violin in 1889 he married and moved to London. In 1890 the *Froisart* overture was played at the 3 Choirs Festival. In 1905 he became Prof. of Music at Birmingham. Elgar is at his greatest in his orchestral music which includes 2 symphonies, many overtures and suites, the *Enigma Variations*, Concertos for violin and for cello, 3 oratorios, chamber music and smaller choral works. See *Elgar O.M.* by Percy M. Young (1955).

ELGIN

[el'-gin] Royal burgh and county town of Moray, 67 m N.W. of Aberdeen. There is a ruined cath. and remains of a castle. Pop. 12,000.

ELGINSHIRE See MORAYSHIRE.

ELIA See CHARLES LAMB.

ELIJAH

(O.T.) Heb. prophet (1 Kings 17-21; 2 Kings 1-3). He led the life of a hermit, emerging to proclaim the wishes of God. Finally he disappeared in a fiery chariot.

ELIOT, George

(1819-80) Pen-name of Marian or Mary Ann Evans, Eng. novelist. B. near Nuneaton. She went to Coventry, 1841; London, 1849; widely read, she replaced her early evangelical faith with an agnostic and positivistic morality. Lived with G. H. Lewes from 1854 until his d. Her works include: *Scenes of Clerical Life* (1858), *Adam Bede* (1859), *The Mill on the Floss* (1860), *Silas Marner* (1861), *Romola* (1862-3),

Felix Holt the Radical (1866), *Middlemarch* (1871-2), *Daniel Deronda* (1874-6). See *Marian Evans and George Eliot* by L. and E. Hanson (1952).

ELIOT, Thomas Stearns

(1888-1965) Anglo-Amer. poet and critic. B. St. Louis, Mo.; educ. Harvard, Oxford, Paris; settled in Eng. 1915 (naturalised 1927). Has pub. poetry: *Prufrock and other Observations* (1917), *The Waste Land* (1922), *The Hollow Men* (1925), *Poems* (1909-25), *Four Quartets* (1944), poetic dramas, *Murder in the Cathedral* (1935) and *The Family Reunion* (1939); *The Cocktail Party* (1949), and *The Elder Statesman* (1958); much criticism, such as *The Sacred Wood* (1920), *Dante* (1929), *The Idea of a Christian Society* (1939), *On Poetry and Poets* (1957). Awarded O.M. 1948, Nobel Prize for Lit. 1948, and the 'Ordre pour le Mérite' in arts and sciences in Bonn (1959).

ELISABETHVILLE

Principal town of Katanga prov., Congolese Repub. Pop. 183,000.

ELIZABETH

(1709-62) Empress of Russia, daughter of Peter the Great and Catherine I, she appeared in 1741 at the head of the party that deposed the young Tsar, Ivan VI. She became empress and ruled Russia until her d. Much of her reign was occupied in fighting against Frederick the Great. She founded the Univ. of Moscow.

ELIZABETH

Eldest daughter of James I, mar. Frederick, later King of Bohemia. Mother of Sophia whose son was George I.

ELIZABETH, Woodville See EDWARD IV.

ELIZABETH

(1533-1603) Queen of Eng. and Ireland, daughter of Henry VIII and Anne Boleyn. She succeeded to the throne in 1558. The first part of her reign was occupied with the estab. of the C. of E. Then hostility between Eng. and Sp. became open war. Plots were discovered to kill the Queen and replace her by Mary, Queen of Scots. The execution of Mary in 1587 put an end to one danger, and the defeat of the Sp. Armada in 1588 made Eng. supreme on the seas. The last years of the reign were troubled by risings in Ireland and by the queen's reluctance to name a successor. She refused to mar. Philip II of Sp.; she toyed with the idea of marrying Henry III of Fr. or a Fr. prince, but these were only moves in the polit. game. See Neale's *Queen Elizabeth* and Lytton Strachey's *Elizabeth and Essex*.

ELIZABETH

(1900-) Queen of Gt. Brit. Lady Elizabeth Bowes-Lyon, daughter of 14th Earl of Strathmore, mar. April 26th, 1923, Prince Albert Frederick Arthur George, Duke of York, 2nd son of King George V. On the abdication of Edward VIII, 1936, the Duke and Duchess of York became King and Queen.

ELIZABETH

(1926-) Queen of Gt. Brit. Elizabeth Alexandra Mary, the elder daughter of George VI and Queen Elizabeth. She first undertook public duties at the age of 16, and in the 2nd World War she served in the A.T.S. She mar. Lieut. Philip Mountbatten, Duke of Edinburgh, in Westminster Abbey in Nov. 1947. They have 4 children: Prince Charles, Prince of Wales, b. in Nov. 1948, Princess Anne, b. in Aug. 1950, Prince Andrew, b. in Feb. 1960, and Prince Edward, b. March 1964. Became Queen, Feb. 6th, 1952, upon death of her father. Crowned Queen, June 2nd, 1953.

ELK

(*Alces machilis*) Largest species of deer, native to N. Europe, Siberia and Amer. where it is called the Moose. The Alaskan Elk is a gigantic

animal, with broad, palmate antlers weighing 50-60 lb. Americans give the name Elk to the Wapiti deer, *Cervus canadensis*.

ELLIS, Henry Havelock

(1859-1939) Brit. psychologist. B. Croydon. After teaching in N.S. Wales, he took his med. degree in London. He soon afterwards abandoned his practice for lit. and scientific work. His works include: *Man and Woman* (1894-1904), *The Task of Social Hygiene* (1912), *Essays in Wartime* (1916), *Essays of Love and Virtue* (1931). His greatest work is *Studies in the Psychology of Sex* (7 vols.).

ELM

Genus of trees and shrubs (*Ulmus*), native to N. temp. regions. The common *U. procera*, a tree growing up to 130 ft. rarely perfects its winged, 1-seeded fruits in Brit. The hard, tough, close-grained timber serves for keels, tackle-blocks, coffins, wheel-naves and common turnery. The indigenous Scotch or wych elm, *U. glabra*, which is almost as tall, yields timber for boat building. Elms are subject to a disease which causes the tree to die back.

ELLSINORE See HELSINGOR.

ELY, Isle of

District of N. Cambridgeshire, an admin. county with its cap. at March. Ely is the chief town. It is an agricultural region, famous for its market gardens. Ely returns 1 member to Parl. Pop. 89,420. Ely. City and market town of Cambridgeshire on the Ouse, 16 m. N. of Camb. It is the chief town of the Is. of Ely and has an agricultural trade. Ely is famed for its cath. Pop. 9,815.

EMBOLISM

Med. term denoting obstruction of artery by clump of bacteria, clot of blood or droplets of fat or air, none of which originated at the site of obstructions but were carried there by bloodstream. See THROMBOSIS.

EMBRYOLOGY

Science relating to the development of an animal or plant from the egg to the mature organism. The individual plant or animal usually starts its life cycle in the union of 2 germ cells or gametes, one the sperm cell or spermatozoon, the other the ovum or egg cell. The ovum, after fertilisation, undergoes cell division, resulting in the formation of tissues and organs. The details of these early stages showing the plastic nature of the earliest cells and the changes undergone as they come to form organised tissues is part of the subject matter of experimental embryology. Further, the nuclear characteristics of the fertilised egg determine its heredity, i.e. the type of organisation it is capable of developing, and provides the starting point for the science of genetics.

EMERALD

Precious stone, the green beryl. It is a silicate of beryllium and aluminium, the colour being due to a minute proportion of chromium compounds and varying from a grass-green with a yellowish tinge to a deep emerald green. The lustre of the emerald is vitreous with a velvety

effect in the finest gem stones. The finest stones are found in Colombia.

EMERSON, Ralph Waldo (1803-82) Amef. author. B. Boston, Mass.; educ. Boston and Harvard; taught; visited Europe. Returned to U.S.A. and settled at Concord; preached and lectured, ed. *The Dial* (1842-4), and wrote both prose and poetry, becoming identified with *Transcendentalism*, an idealist philos. leaning towards a mystical naturalism. His reputation was based mainly on his lectures and essays. *Nature* (1836), *Essays* (1841), *The Conduct of Life* (1860), *Society: Solitude* (1870), *Letters and Social Aims* (1876).

EMERY

Dark brown or greyish-black variety of corundum, composed of alumina mixed with the iron oxides, magnetite and haematite, used as an abrasive on account of its extreme hardness. It is found in crystalline limestones assoc. with metamorphic rocks in Naxos in the Aegean Sea, but its chief commercial sources are Ontario, New York State and the Transvaal.

EMIGRATION

Act of leaving one's native country in order to settle in another. Emigration in the modern sense began in the 17th cent. when Europeans crossed the Atlantic to settle in Amer. In the 19th cent. emigration to N. Amer. reached enormous proportions. Australia and parts of S. Africa were also peopled by European emigrants. After a time the new countries began to place restrictions on immigrants. Still more drastic measures were taken in the U.S.A., Australia, Canada and elsewhere to keep out coloured immigrants. In order to assist emigration, the Brit. Govt. has an Overseas Settlement Dept. at Caxton House, Westminster. In 1948, 157,290 emigrants left the Brit. Is., the total for 1962 being 91,200.

EMPEROR

(1) Word used for a ruler more powerful than a king. Julius Caesar called himself *imperator* which then meant C.-in-C. and his nephew, Augustus, assumed the power permanently, and was thus the first Emperor. The title was used by those who claimed to be the successors of the Roman emperors. See **EMPIRE**. (2) A large butterfly found in the S. of Eng. is called the emperor, or purple emperor, on account of the purple lustre on the male. There is also an emperor moth which is found in Britain.

EMPIRE

Term used loosely for a state of the most powerful kind used by the Romans for their Empire and for the Egyptian, Assyrian, Persian, Babylonian and other states. The Rom. Empire (q.v.) was continued by the Byzantine and the medieval empires, and on the ruins of the latter arose the Austrian and German Empires in 1804 and 1871. Both these disappeared in 1918, while the Russian Empire was destroyed a year earlier. The title 'Emperor of the Fr.' was taken by Napoleon in 1804 and Fr. was an Empire for 10 years. The 2nd (Fr.) Empire under Louis Napoleon lasted 1852-71. On the unification of Germany under Prussia, the King of Prussia became the first Emperor of the Germans in 1871. In the 19th cent. the term began to be used for the lands under the King of Gt. Brit. and Ireland. India was made an Empire when the title of Empress was given to Queen Victoria in 1876. In Amer. 2 empires, Brazil and Mexico arose. The only empires in the world since 1918 were the Brit. and the Indian, the one within the other, and the Japanese; but India is now a Republic within the Commonwealth, and after defeat in World War II Japan was driven back into the 4 main islands. The Holy Roman Empire (800-1806) was created by Charlemagne, who was crowned Emperor in Rome by the Pope. It consisted of the lands under his rule, i.e. the present Fr. and Germany,

part of Italy and other European lands. Divided after his d., it fell to pieces in the 9th and 10th cents. It was, however, revived in 962 by Otto the Great, Duke of Saxony who, like Charlemagne, was crowned in Rome by the Pope. His Empire consisted of Germany and Italy. In 1062 the Saxons were succeeded as Emperors by the Franconian or Salian line, who ruled till 1124. The Franconian Emperors were succeeded by the Swabian house of Hohenstaufen. Rudolph of Habsburg was elected German King in 1273. In 1346, Charles, King of Bohemia became ruler of Germany and later became Emperor. Charles was followed by his sons, Wenceslaus and Sigismund, and on the d. of the latter, Albert of Habsburg secured the throne. From then until 1806, in practice though not in theory, the Empire was the possession of that great family. One after another its members were elected, but, esp. after 1648, the Empire was but a loose collection of rival states over which the Emperor had little authority. The greatest Habsburg Emperor was Charles V, and the last was Francis, who resigned in 1806.

EMPLOYER

One who engages another to work for him or her at a wage or salary, either temporarily or permanently. An employer must observe the laws concerning the relations between master and servant. Between the employer and employed there is a contract. At common law an employer is liable to pay damages to a servant who is injured in the course of his employment. This was dealt with in detail in the Employers' Liability Act of 1880, and in the various Workmen's Compensation Acts. The Nat. Insurance (Industrial Injuries) Act, 1946, supersedes these.

EMPLOYMENT EXCHANGES

Local agencies for estab. contact between employers requiring labour and workers seeking employment. They were instituted under the *Labour Exchanges Act*, 1909. The *Unemployment Insurance Act* of 1912 placed on the exchanges the task of paying unemployment benefits. During and after World War II, they were responsible for the registration of men and women for National Service.

EMS TELEGRAM See **FRANCO-PRUSSIAN WAR**.

EMU

(*Dromaeus*) Large bird found only in Australia and the adjacent Is. Though smaller, it resembles the ostrich, having only rudimentary wings. It can run very fast and swim well. Emus live in flocks in uninhabited parts and feed chiefly on native plant life and grasses. The male is smaller than the female and incubates the eggs, which are green.

ENCYCLOPAEDIA BRITANNICA

The 1st edition began in 1768 was completed in Edinburgh in 1771. Edited by Wm. Smellie (1740-95) it had 2,670 pages. The 9th ed. was completed in 1889. It consisted of 29 vols., its contributors including distinguished men of letters and science e.g. Lord Macaulay, C. Kingsley, Robert Chambers. In 1901 Messrs. H. Hooper and W. M. Jackson bought all rights and began the 11th edit. sponsored by Camb. Univ. and issued by the Univ. press in 1910-11 in 29 vols. In 1920 the E.B. was bought by Sears, Roebuck & Co. of Chicago. A brand new edit. the 14th, containing contributions from c. 3,500 famous men and women, was pub. in 1929. The E.B. is now pub. with the editorial advice of, and consultation with, the faculties of the Univ. of Chicago. The first vol. of the *Britannica Year Book* was pub. in 1938.

ENCYCLOPÉDIE

Encyclopaedia issued in Fr. (1751-76, 35 vols.), begun as tr. of Ephraim Chambers' *Encyclopaedia* (1728). It was ed. by Diderot and d'Alembert and had Voltaire, Rousseau, Buffon, Montesquieu and others as contributors. It was typical of the 18th cent.'s aim of co-ordinated

His assoc. with Karl Marx began in Paris in 1844, and from then onwards they strove to organise an internat. socialist movement and collaborated in the *Communist Manifesto*.

ENGLAND

Kingdom of Europe, occupying the S. part of the Is. of Gr. Brit. Bounded by Scot. and Wales on the N. and W., it has a long coastline on the N. Sea, the Eng. Channel, the Atlantic Ocean and the Irish Sea. The N., W. and S.W. of the country is hilly. From N. to S. the main regions of high ground are the Cheviot Hills, the Cumberland Mts., the Pennine Chain, with the Yorkshire Moors to the E., the Cotswold Hills, and Dartmoor and Exmoor in the W. country. The highest peak is Scafell Pike (3,210 ft.) in the Lake District. In the lowland region of Eng. are the Chilterns, the N. and S. Downs and the Weald. The chief rivers are the Thames, Severn, Trent, Tyne, Tees, Mersey. Round the coast are many excellent harbours and ports, e.g. London, Liverpool and Bristol. Eng. includes several smaller Is. such as the Is. of Wight, the Scilly Is. and the Is. of Man (q.v.). The climate is temp. Agriculture is carried on over most of the country, but is mainly important in the lowland region of the S. and E. E. Anglia produces wheat, barley and beet sugar; Kent is famous for its orchards and hop fields; Devon, Hereford and Worcester also produce fruit. Agriculture does not provide sufficient food for the population, and many foodstuffs are imported. Industry is much more important. There are extensive coalfields, and around these great industrial centres have developed. These include the iron and steel regions of Birmingham and Sheffield; the shipbuilding of the N.E. coast; the cotton and woollen districts of Lancs. and Yorks. Fishing is carried on round all the coasts. London is the cap. and largest city; other great cities are Birmingham, Liverpool, Manchester, Sheffield, Leeds, Bristol, Newcastle-upon-Tyne (q.v.). The Eng. people on the whole are descended from the Anglo-Saxons and Danes, who invaded the country, but there have been many additions to the racial composition during the cents. The Celtic strain is dominant in the S.W. Eng. is divided into 40 geographical counties, excluding Monmouthshire. Area: 50,332 sq. m. Pop. c. 44,017,660. **England, Church of. Nat. Ch. of Eng.** and the recognised parent of the Anglican Ch. throughout the world. It dates from the 6th cent. when St. Augustine settled at Canterbury and it was soon organised into dioceses under bishops. Under Henry VIII the C. of E. broke away from Rome. Its doctrines were reformed under Edward VI, and since the time of Elizabeth there have been no fundamental changes. The C. of E. is organised in 2 provinces, Canterbury and York, each under an archbishop. The 2 archbishops and 22 bishops

sit in the House of Lords. The C. of E. is controlled by the state, and no alterations can be made in its doctrines, or its form of worship, without the sanction of Parl. Under Parl. it is governed by a nat. assembly, a body set up in 1920 and consisting of 3 houses, bishops, clergy and laity. There is an annual ch. congress.

ENGLISH CHANNEL

Arm of the sea, between Eng. and Fr. On the W. it connects with the Atlantic Ocean and on the E. with the N. Sea. It is narrowest bet. Dover and Calais (21 m.).

ENNISKILLEN

Market and county town of Fermanagh, N. Ireland, on an Is. in the narrowest part of Lough Erne. Pop. 7,530. Enniskillen or Inniskilling, a great Protestant centre in the time of William III, gives its name to 2 regiments of the Brit. Army. These are the 27th Foot, known as the Royal Inniskilling Fusiliers and the Royal Inniskilling Dragoons.

ENSIGN

The flag carried by a ship as the insignia of her nationality or the nature of her duties. Brit. has 3 ensigns: the white of the Royal Navy, the blue of the Royal Naval Research and the red of the Merchant Navy. Ships of the Royal Yacht Squadron have the privilege of flying the White Ensign. Each flag has the Union Jack in the 1st quarter and the White Ensign bears in addition the cross of St. George. An ensign for civil aircraft was authorised in 1911. It is light blue with a dark blue cross, edged with white, and has the Union Jack in the 1st quarter. The R.A.F. ensign is similar to the Blue Ensign with in addition, a small red circle surrounded by circles of white and blue.

ENTERITIS

[i-ti-tis] Inflammatory disease affecting mucous membrane of bowel. Usually assoc. with infection such as dysentery but occurring as an indication of general toxæmia in pneumonia, nephritis, tuberculosis and many other diseases, including poisons. See TYPHOID FEVER; DYSENTERY; COLIC.

ENTOMOLOGY

Branch of zoology that deals with insects. Now restricted to the true or 6-legged insects.

ENZYME

[i-zim] Active principle of a ferment. Enzymes belong to the class of catalysts, or substances whose mere presence induces chem. changes in other molecules, but an enzyme will usually act on one or a few closely related chem. compounds only, and will refuse to touch any molecule coming outside its own limited range of specificity.

EOCENE

[i'-o-sen] Oldest division of the Tertiary system of geological deposits, the period of the dawn of mammal life following the Cretaceous period. Eocene strata usually rest upon the denuded surface of the underlying beds of white chalk and often form basin-like areas showing, by their character and fossil contents, their origin in estuaries and shallow seas. The beds consist of sands, clays and marls.

EOLITH

[i'-o-lith] Name given to certain very early flint

implements. Eoliths are generally flat on one surface and chipped to form a scraping edge or notches.

EPAMINONDAS

(c. 418-362 B.C.) A Theban general and statesman. In 371 he was one of the generals at the Battle of Leuctra; in 370 he invaded Peloponnesus, where he founded Messene and Megalopolis. In 362 he invaded it for the 4th time, and was killed gaining a brilliant victory over the Lacedaemonians at Mantinea.

EPEMER

(*Ephemeroptera* *Optera*) Order of insects popularly called May-flies. They have a long, jointed abdomen, with 3 bristle-like tails. The aquatic larvae, living in ponds and sluggish streams, pass into a chrysalid stage which, in *Ephemera vulgata* and *E. danica*, 2 of the commonest of Brit.'s 50 species, furnish the bait anglers call Green Drake and Grey Drake. The perfect insects do not eat and are short-lived.

EPHESUS

In ancient geog. the chief of the 12 Ionian cities on the coast of Asia Minor. It has numerous interesting ruins, including the famous temple of Diana (Artemis) built in the 6th cent. B.C. Ephesians, Epistle to the Tenth book of the N.T. Written during St. Paul's first imprisonment in Rome, A.D. 62, it was apparently a circular letter addressed to the churches of Asia Minor.

EPIC

The story of a momentous action conceived and told with some grandeur. A distinction is made between 'primary epic' (*Iliad*, *Odyssey*, *Beowulf*, *Nibelungenlied*, *Irish epic*, *Kalevala*, *Gilgamesh*), close to popular legend, a natural growth, and 'secondary epic' or art-epic (Virgil's *Aeneid*, Camoens's *Lusads*, Milton's *Paradise Lost*, Ronsard's *Franciade*), the conscious imitation of the first in a more sophisticated society.

EPICUREANISM

Gk. school of philosophy founded by Epicurus (341-270 B.C.). B. Samos, he taught in Athens from 306 B.C. His method is condensed in 4 canons: (1) Seek pleasure that produces no pain. (2) Reject pleasure that produces pain. (3) Reject pleasure that prevents the enjoyment of greater pleasure or produces greater pain. (4) Endure pain that averts greater pain or secures greater pleasure.

EPIGLOTTIS

[i-glot-i] Flap-like structure of cartilage with a covering of mucous membrane, situated behind the tongue and above the opening of the larynx or upper windpipe. It prevents food and fluids from passing into air passages.

EPILEPSY

Disorder of nervous system characterised by sudden attacks of unconsciousness of short or long duration accompanied on occasions by convulsive movements and loss of control of bladder and bowels. Attacks of epilepsy with convulsions are called *grand-mal*, attacks with momentary loss of consciousness are called *petit-mal*. The cause of epilepsy is unknown but is assoc. with hereditary influences, and may follow meningitis. Treatment of a grand-mal is mainly directed to preventing patient injuring himself by knocking his body against hard objects or falling into fire. The air passages should be kept cleared and tongue protected by introducing a handle of a spoon or piece of stick between the teeth. No known

epileptic is allowed by law to work on or near moving machinery of any kind, and motor car licences are not as a rule issued to epileptics.

His last great religious work was a bronze, *St. Michael and the Devil*, for the new Coventry Cathedral.

EQUATION

In algebra, a statement or formula expressing the equality of 2 quantities. The 2 parts of the equation are separated by the sign of equality, as, e.g. $3x=21$. The term *chemical equation* is used for the symbolic representation of a chem. reaction, the symbols of the reacting substances being placed on the left and those of the substance produced by the reaction on the right, as in $H_2+Cl_2=2HCl$.

EQUATOR

Imaginary line drawn round the earth equally distant from the poles. Its plane cuts the earth's axis at right angles and it divides the globe into 2 halves, the N. and S. hemispheres. Latitude is measured N. and S. of the equator by small circles parallel to it, the equator being regarded as 0° of latitude. The sun is directly over the equator at noon twice a year, the *vernal* and *autumnal equinoxes* (q.v.).

EQUINOX

A point when the equator lies in the plane of the earth's orbit and day and night are equal in length in all parts of the world. The vernal or spring equinox occurs on Mar. 21-22, the autumnal on Sept. 21-22. The vernal equinox also marks the point in the heavens where the sun crosses the equator.

ERASMUS, Desiderius

(1466-1536) Dutch humanist. B. Rotterdam, d. Basel. Travelled; visited Eng. (first in 1496)

and 1511-14 taught Gk. at Camb. He was a friend of Sir Thomas More and assoc. with the 'Oxford Reformers'. Erasmus's ed. (text with Lat. tr. and comment) of the N.T. 1516, and his *Encomium Moriae* (*Praise of Folly*) 1509, influenced the Reformation, but he wrote against some of Luther's views. His *Colloquia* (*Dialogues*) and *Adagia* (*Proverbs*) are well known, and the vast collection of his letters (over 3,000) is an important Renaissance document. See *Erasmus of Rotterdam* by J. Huizinga (1953).

ERASTIANISM

The sacrament of the Lord's Supper. The word, denoting thanksgiving, was applied to the consecrated elements, and then to the whole celebration, which passed into the sacrifice of the Mass. At the Reformation, the Anglican Ch. adopted the term Holy Communion; some other Protestant chs. adhere to the orig. name, the Lord's Supper. The R.C. Ch. and high Anglican Ch. use the term Eucharist.

EUCLID

Gk. mathematician. He taught at Alexandria c. 300 B.C. Other extant works are *Data*, 95 geometrical propositions, and an astronomical treatise *Phaenomena*.

Pythagoras' theorem from Euclid's geometry

EUÈNE

(1663-1736) Ital. prince and soldier, son of a prince of Savoy. He served as an officer in the Aust. army. In 1697 he won one of his great victories at Zenta against the Turks. In the war of the Sp. Succession he ranked with Marlborough as a leader of the Allies. In 1716 Eugène commanded an army which defeated the Turks, and took Belgrade.

EUGENICS

Study of the factors which may improve or impair the physical and mental racial qualities of future generations. The modern science owes its inception to Sir Francis Galton. A further advance was made by the Mendelian research into the laws governing the transmission of hereditary physical characters. See *Eugenics* by C. P. Blacker (1933).

EUÈNIE

EUROPE

Continent bounded on 3 sides by the sea and on the other by the Ural Mts. which separate it from Asia. The seas are the Arctic, Atlantic Ocean and the Medit. A short land boundary is formed by the Caucasus Mts. in the S.E. The length of the continent from Cape St. Vincent in Spain to the Urals is c. 3,200 m. From Cape Matapan in Greece to the North Cape in Norway it is c. 2,400 m. There are 3 major divisions. (1) the Scandinavian Highlands in the extreme N., (2) the N. European Plain, which extends from the W. coast of Fr. across the continent, and (3) the mts. of C. and S. Europe, including the Pyrenees, Alps, Carpathians and Apennines and the Balkan Mts. The highest mts. are the Alps. There are many rivers, e.g. the Rhine, Danube and Volga. The chief lakes are Vener, Vetter and Onega in the N., and Geneva, Constance, Lucerne and Zurich in the Alps. The climate is temp. maritime in the W. increasing in continentality eastwards and inland. The soil is on the whole fertile. There are rich deposits of the basic metals so that many industries have grown up and in certain areas the density of pop. is extremely high. Europe was orig. peopled from the M.E. and Asia. From the time of the Gks., Europe has led the world in Science and Art, and there has been a series of emp. building countries viz. the Gks., Rom., Fr., Brit., Germans and Russians. Much of Europe was included in the Rom. Empire, on the fall of which separate states began to rise. Between these states there were constant wars and frequently changes of boundary. The smaller states were gradually joined to form large ones. Later 5 countries ranked as the Gt. Powers. They were Brit., Fr., Germany, Austria and Russia, joined later by Italy. Austria and Germany claimed to be the successors of the Holy Rom. Empire. The most important movement in Europe during the last cent. was the rise of Prussia and the formation of the German Empire in 1871. Germany's ambitions provoked the world conflict of 1914-18, and were responsible for the War of 1939-45. The influence of the Soviet Union spread further and further W. The tendency for countries to form themselves into Republics was marked, and the left-wing movement became increasingly prominent throughout Europe. Area: c. 3,750,000 sq.m. Pop. 572,000,000.

EUTHANASIA

Comfortable or painless death. Long advocated for people suffering from incurable diseases assoc. with great pain, but no legislation has yet been introduced to legalise any such procedure.

EVANGELICAL

Pertaining to the Christian evangel or gospel. The term may denote the first 4 books of the N.T. The principles conformable thereto, i.e. evangelical doctrine, or communions governed by scripture alone, i.e. Protestant evangelical ch. In 18th cent. Eng. an evangelical revival developed a Low Ch. movement within the Anglican Ch. and occasioned John Wesley's Methodist movement.

EVANS, Sir Arthur

He wrote on agriculture, forestry, engraving, but is famous for the Diary which covers his life from 1641 until 3 weeks before his d. at Wotton.

EVENING PRIMROSE

Biennial herb (*Oenothera biennis*), of the family Onagraceae, a native of the U.S.A. It has flower stems 4-5 ft. high, bearing spikes of large yellow flowers which only open towards sunset.

EVEREST, Mount

Peak, 29,028 ft. high, of the Himalayas, the highest mt. in the world, on the borders of Nepal and Tibet. It was named after Sir George Everest, 1st Surveyor-General of India. In 1922 Brigadier-General C. G. Bruce led an expedition in an attempt to reach the summit of Everest. Mallory, Somervell and Norton reached 27,000 ft. without using oxygen. In 1924 Norton and Somervell attained an altitude of 28,000 ft. A day later Mallory and Irvine set out on a determined effort to reach the summit. They were last seen by Odell. For the next 9 years Tibet was closed to all white men, but in 1933, 2 planes flew over the summit, for the first time. No further exped was possible during World War II and after the Communist occupation of Tibet, but in 1951 permission was granted by the Maharajah of Nepal for a new approach from the south, to a Brit. exped led by Eric Shipton. A Swiss exped. under Wyss-Dunant in 1952, reached the highest point yet attained, 28,215 ft. and in 1953 the Brit. exped. under Col. H. C. J. Hunt was successful. E. P. Hillary, a New Zealander, and Sherpa Tensing Bhutia reaching the Summit on May 29. See *The Ascent of Everest* by John Hunt (1953).

EVIL EYE

Faculty of influencing persons or things to their harm by looking at them. Belief in the evil eye was common to the Hebs., Gks and Egyptians and was rife throughout Europe in the M.A. Most savage races have been found to believe in it. Charms and amulets are supposed to avert it.

EVOLUTION

Process by which plants and animals have developed by gradual modification from previously existing forms of life. It is only by reference to the fact of evolution that the resemblances and differences of structure in various groups of plants and animals can be satisfactorily explained. It elucidates the appearance of features, permanent in lower forms, in the development stages of the higher animals, e.g. fish-like characters and reptilian characters in the early stages of the embryo of a mammal. Fossil remains, though necessarily incomplete, supply many indications of the evolution of complex types from simpler ones.

EXCHEQUER

In Brit. the govt. dept. which deals with monies received and paid on behalf of the public services of the country.

EXCISE

[-siz'] Duties levied on goods produced within a country, as distinct from customs duties levied on goods entering a country. Under a

system of Free Trade every customs duty is counterbalanced by a corresponding excise duty. In Eng. the earliest excise duties date from the 17th cent. In the 18th cent. they became very numerous and their collectors, the excisemen, were detested. In the 19th cent. many excise duties were removed and today are levied only on beer, spirits, entertainments, sugar, matches, table waters, British wines, liquor licences, dog, gun and game licences, and a few other minor articles and licences.

EXCOMMUNICATION

Exclusion of offending members from the rights and privileges of a religious communion. It may be temporary or permanent, partial or total. It is based upon synagogue practice, involving congregational assent, but bishops gradually assumed the prerogative of excluding offenders from the sacraments for heresy, immorality or disobedience. Pope Gregory VII first deposed a monarch by excommunicating the Emp. Henry IV, 1077; Innocent III placed Eng. itself under an interdict and excommunicated King John.

EXE

Eng. river which rises on Exmoor, Somerset, and flows S. across Devon, entering the Eng. Channel by a navigable estuary 6 m. long.

EXECUTION

One kind is a distraint on the goods of a person who has not paid a debt after being ordered to do so by a court. Another form of execution is putting a person to d. after sentence has been passed. This is done in Brit. by hanging; in Fr. by the guillotine; and in parts of the U.S.A. by the electric chair. Until 1868 executions in Eng. were public. Soldiers, sailors and airmen sentenced to d. under military law, are shot.

EXETER

City, county borough and county town of Devon, on the Exe. It is the agricultural and commercial centre for a wide district. The chief building is the cathedral dedicated to St. Peter. The Guildhall dates from Elizabethan times. Parts of the city walls still stand. There is a Univ. Coll. founded 1865, and a public school, Exeter School, 1633. Exeter returns 1 member to Parl. Pop. 80,000.

EXHIBITIONISM

(Psychology) Beh. designed to attract attention. It stems from an inferiority complex or the desire to find compensation for what the subject believes to be lack of appreciation of his personality, mind or work. In children it may develop from a sense of being neglected or unwanted.

EXISTENTIALISM

Philosophical system propounded, esp. after World War II, by the Fr. philosophers J.-P. Sartre, Simone de Beauvoir and Albert Camus. Its main tenet is that in all important matters 'Facts come before the idea', and it insists on facing the facts of man's nature. Sartre ignores the religious element and is himself an atheist Existentialist.

EXMOOR

Moorland tract in N. Somerset and Devon. It covers 20,000 acres of wild and beautiful scenery. Dunkery Beacon, 1,708 ft. is the highest point. Simonsbath is the centre of the moor, and on its borders are Minehead and Dulverton. Much of it belongs to the Nat. Trust.

EXODUS, Book of

Second book of the O.T. Describes the release of the Hebrews from their Egyptian bondage, the preparation of Moses, the ten plagues, the passover, and the flight across the Red Sea to Sinai (c. 1-18). The remainder records the prolonged sojourn in the Sinai wilderness, the promulgation of the Ten Commandments, and the Book of the Covenant (c. 19-40).

EXPLOSIVE

Material capable of rapid conversion into a large volume of gas, usually by detonation. The original explosive, gunpowder, has become superseded by dynamite, gun cotton and cordite. Owing to obvious dangers in the manufacture, storage and conveyance of explosives, the industry is strictly regulated by the Explosives Act, 1875, and other legal restrictions.

EXPORTS

Goods sent out of a country. In Brit. they are valued by the authorities at the custom houses. The difference between a country's exports and imports is the *balance of trade* (q.v.). Invisible exports are sums paid for shipping, insurance, etc. Re-exports are goods imported in order to be sent to another part of the world. In 1913 Brit's. exports were valued at £634,800,000. In 1938, they were valued at £470,755,320. In direct consequence of the War, with the disappearance of many of Brit's. overseas assets, the imperative need of exports has become evident. The value of exports in 1963 amounted to approx. £4,080,076,444, but the improvement is largely due to inflation.

EXPRESSIONISM

The term given to an approach to painting which is essentially emotional. Expressionist painters aim at conveying a state of mind rather than a naturalistic representation. Early masters were El Greco, Bosch, Goya and Grünewald. At the end of the 19th cent. Edvard Munch, a Norwegian, led a group of painters in Berlin. Other artists who may be termed expressionists are Ernst Josephson, Oskar Kokoschka, Rouault, Chagall, Jack Yeats, Soutine, van Dongen and Kandinsky.

EXTRA-SENSORY PERCEPTION

Evidence shows that: (1) Some people can become directly aware of events taking place in the minds of others. (2) Some have knowledge of events taking place remotely from them. (3) Some can become aware of events, either mental or physical, which have not yet taken place. (4) Some are capable of *telekinesis*, i.e. they can influence the behaviour of matter at a distance by means beyond the range of the senses. (5) Some have the power of *clairvoyance*, i.e. they 'see' things which may exist in states of matter the rates of vibration of which are beyond those of normal vision, or, with no help from sense impressions, can give information about events taking place in the outside world. (6) Some have the power of *clairaudience*, i.e. they hear sounds which are beyond those of normal hearing. (7) Some possess the power of *psychometry*, i.e. by the 'feel' of an article which has been carried or worn by an individual, they can tell a great deal about the life, health, etc. of the person.

EXTREME UNCTION

A sacrament of the R.C. Ch. consisting of

anointing the dying with oil. Olive oil, blessed by a bishop, is used, and is applied by a priest to the eyes, ears, nostrils, mouth, hands, feet, loins.

EYE

Organ of vision comprising eye-ball 1 in. in diameter set in hollow of skull called orbit. The eye structure comprises the eye muscles, the eye-ball and the optic nerve. Eye-ball consists of 3 coats. An outer which is transparent in front and called *cornea* and opaque at back and is called *sclera*; a vascular tissue called *choroid* which lines inner aspect of sclera, and a nerve tissue part called *retina* which lines inside of choroid and is developed from the optic nerve which pierces sclera and choroid. Other structures of eye include lens which is a bi-convex solid translucent disc suspended between iris and vitreous body and is enclosed in a glossy elastic capsule. Vitreous body occupies $\frac{4}{5}$ of space at back of eye, with retina on its outer aspect. Composed of soft transparent jelly-like body.

EYEBRIGHT

Annual herb (*Euphrasia officinalis*), of the family Scrophulariaceae, a native of N. temperate regions growing throughout Brit. It is parasitic upon grass roots and has egg-shaped or lance-shaped leaves, and small white or lilac flowers stained with purple, the lower lip's mid-lobe being yellow.

EYRA

[Ā-rā] Wild cat of S. Amer. (*Felis eyra*) inhabiting the region between S. Brazil and N. Mexico. Preys on poultry.

EYRE

[air] Large salt lake of C. Australia into which drain numerous intermittent rivers. It is dry for much of the year. Named after its discoverer, the Eng. explorer, Edward John Eyre (1815-1901).

EZEKIEL, Book of

Prophetical book of the O.T. Ezekiel was a priest of Jerusalem, exiled to Babylon by Nebuchadnezzar, 597 B.C. The book gives a vision of the ideal theocracy.

EZRA, Book of

Historical book of the O.T. Ezra was a Jewish scribe living in captive exile in Babylon under Artaxerxes Longimanus. Recording Cyrus's decree for rebuilding the Jerusalem Temple, the book describes the return of the first company of exiles under Zerubbabel, and the rebuilding (c. 1-6), then Ezra's return and the reforms he effected (c. 7-10).

F

6th letter of the Eng. and Lat. alphabets. A labio-dental articulation, it is formed by the passage of breath between the lower lip and the upper teeth. The figure of the letter F is the same as that of the ancient Gk. digamma, and in words derived from Gk. the sound of *f* is represented by *ph*, e.g. *philosophy*.

FACTORY ACTS

19th cent. Acts of Parl. to regulate hours, conditions of work, safety and sanitary provisions.

FAEROES, The

Group of c. 20 Is. belonging to Denmark, in the N. Atlantic, 200 m. N.W. of the Shetland Is. The largest are Strömö, containing the cap. Thorshavn, and Syderö. Fishing is the most important industry. In 1946 the people voted for separation from Denmark, but subsequently reversed this decision. They now have a certain measure of self-govt. The legislative body is the Løgting; representatives are sent to the Danish Rigsdag in Copenhagen. Area: 540 sq.m. Pop. 35,000.

FAHRENHEIT, Gabriel Daniel

(1686-1736) German physicist, b. Danzig. He devised, c. 1726, the thermometric scale in which the freezing pt. of water is fixed at 32° and the boiling pt. at 212°, the intervening space being divided into 180 equal degrees. In the centigrade scale freezing pt. is 0° and boiling pt. 100°. Conversion is effected as follows:

$$^{\circ}\text{C} = 5(^{\circ}\text{F} - 32) \div 9. \quad ^{\circ}\text{F} = (^{\circ}\text{C} \times 9 \div 5) + 32.$$

FAIR ISLE

Is. of Scot. one of the Shetland Is., 16 m. S. of Mainland, and midway between the Shetland and Orkney groups. The inhabitants engage in sheep rearing and fishing, and in making woollen garments, including the celebrated Fair Isle jerseys. In 1954 the Is. was taken over by the Nat. Trust for Scotland to provide a permanent foundation for research into migratory bird life.

FAIRFAX, Baron

(1612-71) Thomas Fairfax, Eng. soldier. He joined the Parl. forces at the outbreak of the civil war. Fairfax was made C.-in-C. in 1645 and was partly responsible for the victory at Naseby. He refused to attend as one of the judges apptd. to try Charles I. Later he aided Monk in placing Charles II on the throne.

FAITH HEALING

In the Christian Ch. the tradition of faith healing dates from the earliest days of Christianity. In the Reformation faith healing proper was performed by the Moravians and Waldenses and Luther and other reformers practised faith cures in the 16th cent. In the 17th and 18th cents. Baptists', Quakers' and Methodists' faith cures were recorded and it is practised today. The miracles of Lourdes, the tombs of St. Louis and St. Francis of Assisi are products of faith healing. Christian Science (q.v.) holds that pain is an illusion and seeks to cure by instilling this fact into the mind of the patient.

FAKIR

Religious devotee. The term is used chiefly in India, where they number over 1,000,000. They are partly orthodox ascetic mendicants of the

dervish orders, partly irresponsible nomads and also Hindus. Some of the latter pertain to the yogi orders.

FALAISE

FAMILY

Unit. of soc. consisting of father, mother, and their offspring. It is used also for a larger unit, brothers, sisters, and their offspring. Scholars agree that it goes back to the beginnings of h.man soc. The family was mainly patriarchal and under the rule of the father. In many countries it included his children by various wives and concubines. In some socs. it was matriarchal, the mother being the recognised head. In the western world, protected by the power of the Christian Ch. it took the form which it now retains.

FAMINE

General scarcity of food leading to starvation

and frequently d., caused by the failure of the crops, which in its turn may have been due to drought, war, or pestilence. They have been most terrible in the densely populated countries of the E. where any serious decrease in production quickly brings about a famine. Famines are mentioned in the Bible. There was a terrible European famine in 1162 and a potato famine in Ireland in 1846-7. The Thirty Years' War, and, to some extent, World War I led to famines. The severity and frequency of famines has been greatly mitigated by irrigation and modern methods of farming, improved means of transport, methods of preserving food, and attacks on the diseases that destroy food crops.

FARADAY, Michael (1791-1867) Eng. chemist, and physicist. B. London, he was apprenticed to a bookbinder, but found time to study science and in 1813 became assistant to Sir Humphry Davy. In 1827 he succeeded Davy as Prof. of Chemistry at the Royal Inst. Faraday's researches in electrolysis laid the foundations of electro-chemistry. In 1831, he showed that the motion of a conductor in a magnetic field led to the generation of an electric current.

FARNBOROUGH

Urban district of Hants. 33 m. S.W. of London, near Aldershot. On F. Common is the Royal Aircraft Establishment. Pop. 33,430.

FASCISM

Political and social movement, strongly nationalist in character, in which the state is paramount and militant. Strongly opposed to Communism and Socialism, the movement is fiercely anti-Semitic. In Italy it began c. 1919 amongst those who were dissatisfied with the conduct of affairs after World War I. Mainly composed of men who had served in the War, the movement grew rapidly. Fascism was at first republican and socialistic in its aims. Benito Mussolini soon stood out as a leader. They became known as opponents of Communism, then strong in Italy, and in several towns there were riots. In Oct. 1922, there took place the march on Rome. The city was entered by 200,000 armed Fascists, the govt. was overthrown and

a new one under Mussolini set up. Thereafter Fascism was supreme in Italy until milit. defeat in World War II brought about its collapse in 1943. Although Fascism undoubtedly developed Italy's material prosperity, it was at the price of ruthless suppression of constitutional liberty. During the inter-war period there existed a Brit. Union of Fascists, led by Sir Oswald Mosley (q.v.) but the Nazi movement in Germany was the most notorious derivative.

FASTING

Abstention from food. The Mosale law imposed an annual fast on the 'day of the atonement' and the Jews still observe this and other fast days. Moslems fast from sunrise to sunset in the month of Ramadan. The Anglican Ch. prescribes days of fasting or abstinence during the 40 days of Lent, Ember days, Rogation days, all Fridays except Christmas Day, and the vigils of various festivals. The R.C. Ch. makes fasting compulsory. Its most usual form is to eat no meat on Fridays. R.C.'s and High Anglicans must take Holy Communion fasting. Fasting is sometimes resorted to as a means of public protest.

FASTNET

FAURÉ, Gabriel

[faw-ra] (1845-1924) Fr. composer. In 1896 he was apptd. Prof. of composition at the Paris Conservatoire and 9 years later became Director until 1920. His compositions include an opera, incidental music, much chamber music and pianoforte works, a Requiem for soloists, chorus and orchestra and over 90 songs.

FAUSTUS

Historical figure, Dr. Johan Faust, who lived in Germany in the early 16th cent., the subject of legends which attributed to him a pact with the devil. The Faust legend has inspired much lit. and music. A collection of tales about him, pub. in German in 1587, inspired Marlowe's *Doctor Faustus*. Goethe's *Faust* inspired music by Berlioz, Liszt, Schumann, Wagner, Gounod, Busoni. Another *Faust* by Nikolaus Lenau (1802-50) inspired music by Liszt. Thomas Mann's *Doktor Faustus* (1947) is a contemporary German adaptation of the theme.

FAUVES, Les

(wild beasts) Term given in derision to a group of painters who exhibd. in Paris, 1906. Their chief exponent was Henri Matisse, 1869-1954. With him were grouped Braque, Vlaminck, Derain, Dufy, Marquet, Friesz and van Dongen.

FAWKES, Guy

(1570-1606) Eng. conspirator. He enlisted in the Sp. army in Flanders, returning to Eng. in 1604. To Fawkes was left the actual execution

of the plot to blow up the Houses of Parl. and he was arrested at his post, Nov. 4, 1605, the day before Parl. was due to meet. He confessed under severe torture, and with other conspirators was hanged. See GUNPOWDER PLOT

FEDERAL BUREAU OF INVESTIGATION (F.B.I.) Detective branch of the U.S. dept. of justice. Establd. in 1908 to investigate crimes against federal law, as distinct from those against the laws of individual states, the F.B.I. enforces laws against espionage, white-slave traffic, blackmail, racketeering, etc. During World War II, F.B.I. detachments accompanied U.S. armed forces on counter-espionage duties, and since 1945 the bureau has been prominent in anti-Communist activities. The detectives are known as G-men from the dept.'s code letter "G".

FEDERATION OF BRITISH INDUSTRIES Non-polit. assoc. for the encouragement, promotion and protection of Brit. Industries. It was founded in 1916 and granted a Royal Charter in 1923. Its two main functions are: (1) to promote policies serving Brit. Industry as a whole, and (2) to supply its individual members with information and practical assistance. The membership, which is confined to non-nationalist industries, exceeds 6,600 firms, and thousands more are represented by affiliated trade associations. The Federation deals with some 30,000 inquiries each year, and these cover questions on almost every subject having to do with industrial productivity other than labour relations. The Federation has ready access to Mins. and Govt. Depts. and gives evidence to all official committees or Royal Commissions reviewing industrial questions.

FEISAL (1885-1933) King of Iraq, 2nd son of Hussein, Sharif of Mecca (q.v.). Educ. in Constantinople, he was one of the group that deposed Abdul Hamid II of his throne in 1909. In 1918 he helped the Brit. to conquer Palestine and Syria, and he attended the Peace Conference in Paris in 1919. In August, 1921, he was elected and proclaimed King of Iraq. Until 1932 Iraq was governed in assoc. with Brit. along mandatory lines. He was succeeded by his son Ghazi (1922-39) and by his grandson Feisal II (1935-58), who was assassinated. See IRAQ.

FILO DE SI
One who commits suicide (q.v.).

FELONY
Class of crime in Eng. law. All crimes are either felonies or misdemeanours, the more serious ones falling into the former category. Felony includes such crimes as murder, manslaughter and burglary.

FELSPAR
Group of minerals found in most eruptive rocks. They consist of silicates of aluminium with varying proportions of lime, soda or potash, hence the names of potash feldspar, soda feldspar, etc. They vary in colour and form, but have almost the same hardness and specific gravity and similar crystalline shape.

FENCING
Pastime in which the 2 combatants use a light weapon either a foil, sabre or épée. In the 15th and 16th cents. a knowledge of swordsmanship was part of the educ. of a gentleman. In the 16th cent. light swords began to be used and in this way fencing originated, being practised with blunt or protected weapons, as a preparation for the real combat. In Eng. fencing died out when pistols became the regular duelling weapons. As a pastime fencing was taken up in Eng. in the 19th cent. and prospered greatly from c. 1900. To avoid injury the fencers are masked and wear a guard over the head, whilst the weapon is fitted with a button on the point. A little later women began to fence,

Sabre (top), épée (middle) and foil (bottom)

and the Olympic games recognised fencing with foil, épée and sabre as events. There are championships confined to Eng. fencers, one being for women. The Amateur Fencing Assoc. is the controlling body in Brit. Competitions are held regularly.

FENIANS (fē'ni) Patriotic secret society founded in the U.S.A. c. 1860 to make Ireland an indep. repub. In 1867 they attacked a prison van to release 2 colleagues, and killed a policeman, 3 of them were executed, and they are known to the Irish as the 'Manchester Martyrs'. The executions bred terrorism, which forced the Brit. Govt. to give attention to Irish affairs.

FENNEC (*Vulpes zerda*) Small, large-eared African fox, found in all the coastlands of N. Africa from Egypt to Senegambia.

FENNEL
Name of various perennial umbelliferous herbs, esp. the aromatic *Foeniculum vulgare*, native to Brit. Varieties are cultivated in Europe, Amer. and India for their seeds, which yield fennel water.

FERDINAND
Name of 7 kings of Spain. Ferdinand V (1452-1516) became King of Aragon, 1470. Previously he had mar. Isabella, who became Queen of Castile, 1474. Under their rule Spain became a single kingdom with an immense empire overseas, as the Moors were crushed and the New World discovered. His grandson was the Emperor Charles V.

FERMANAGH
(fə-mə-nə'g) Inland county of N. Ireland, in Ulster prov., containing Lough Erne. It is mainly lowland, and agri. culture and fishing are the chief industries. Enniskillen is the county town. Other places are Newtown Butler, Lissanakea and Rosslea. With S. Tyrone it returns 1 member to Parl. Pop. 52,100.

FERMI, Enrico (fə'rmi) (1901-54) Ital. nuclear physicist, b. Rome. He was prof. of physics in Rome and Columbia Univ. and in 1942 constructed the first atomic pile. Nobel Prize for physics, 1938.

FERN
Group of flowerless plants. Mostly perennial herbs with fibrous roots or creeping root stocks, a few have woody trunks. They reproduce by means of microscopic spores; these develop into a green, leaf-like scale or prothallus, beneath which male and female elements, simulating floral anthers and ovaries, produce sexually another spore-bearing plant. The 2,500 species of ferns are cosmopolitan, preferring humid temp. and trop. regions.

FERNANDEZ, Juan (1536-1602) Navigator. B. Cartagena, he observed the course of the trade winds and the currents off the W. coast of S. Amer. He discovered, in the S. Pacific, the islands now bearing his name, one of which became famous as the residence of Alexander Selkirk.

FERNANDO POO
Sp. Is. in the Bight of Biafra, W. Africa, part of the colony of Sp. Guinea (q.v.). It is moun-

tainous but the soil is fertile. Discovered by Portugal in 1471, ceded to Spain in 1788. Area: 800 sq.m. Pop. 34,200.

FERRET

(*Putorius furo*) Half-tamed variety of the polecat. Originating in N. Africa or Spain, and used in Italy for rabbit hunting, it has been known in Brit. for 6 cents. where it is employed for hunting rabbits and rats.

FERRY, Jules François Camille

(-ré) (1832-93) Fr. statesman and lawyer. In 1869 he was elected republican deputy for Paris and was responsible for the govt. of Paris during the siege of 1870. He was twice Premier, 1880-1 and 1883-5.

FERTILISER

Agric. term for plant food added to the soil, such as guano from Peru, potash salts from Germany and nitrate of soda from Chile. It is also used in connection with the artificial manures. Deposits of calcium phosphate occur in many places and the material is treated to form superphosphate of lime. Sulphate of ammonia is a by-product from gas works. More recently the huge supplies of nitrogen in the atmosphere have been drawn upon for the manufacture synthetically of nitrogenous fertilisers.

FERTILITY

The ability to procreate children. About 10 % of marriages in Brit. are childless without the wishes of the partners concerned. Contrary to popular idea, infertility is common in the male. Infertility in the male can be established by examination of the seminal fluid. In the female, fertility varies within wide limits; failure to conceive may also be due to some defect or disease of the reproductive organs. Research is now going on in the science of fertility. For twins, the chance is estimated at once in eighty-eight births, for triplets, once in seven thousand five hundred births, and for quadruplets, once in six hundred thousand births.

FETISHISM

[fet'-] Form of magico-religious belief. It holds that the services of a 'spirit' may be appropriated by possessing its material embodiment. A fetish may be an animal, plant or stone, and may house a disembodied soul.

FEUDALISM

Social and economic system that existed in much of W. Europe from the 11th to the 16th cents. The chief principle of the system was the holding of land in return for services. The king was regarded as the holder of all the land, but much of this he let out to barons, who were his tenants-in-chief and who agreed to perform certain services, usually to provide him with soldiers in time of war. These tenants-in-chief, in their turn, let out land to others on like conditions. In Fr. and elsewhere, although not to the same extent in Eng., feudalism was a danger to the king, as his vassals could make war on him. In Eng. the minor or mesne tenants, as well as the tenants-in-chief, owed allegiance to the king. Feudalism finally broke down in Eng. in the 14th cent. Trade increased, towns grew up, methods of warfare changed, and it became more convenient to pay cash than to render services. It was not until Charles II that the feudal payments were abolished. In Fr. relics of feudalism persisted until they were completely swept away by the Revolution.

FEVERFEW

Wild perennial plant (*Chrysanthemum parthenium*) allied to camomile. It has branched stems, broad, deeply-toothed leaves, and clusters of daisy-like flowers. The plant has an aromatic odour and tonic properties.

FEZ

City of Morocco, in a valley N. of the Middle

Atlas range, c. 100 m. from Rabat. Fez is a sacred Mohammedan city. Silk and cotton goods are manufactured. Pop. 216,133.

FIBRE

Thread-like filament of mineral, plant or animal derivation. Plant fibres are of diverse origin and composition; the hairs of cotton and the fibres of flax and ramie represent nearly pure cellulose; in jute, esparto and sisal, lignin is present, and in raffia and hemp, cutin is a constituent. The hair or fur of animals supplies wool, mohair and other textile fibres, the silkworm provides silk, and the mineral asbestos forms an incombustible fibre. Artificial fibres have chemical structures similar to those of the natural fibres. See TERYLENE.

FIBROSITIS

[-si'-] Painful condition affecting muscles due to inflammation at their insertions into bone or of the fibrous sheaths binding the muscle tissue together. Affects both sexes and all ages and is characterised by sudden onset of pain and tender areas in muscles.

FICHTE, Johan Gottlieb

[fich'-təl] (1762-1814) German philosopher who re-shaped the Kantian Philosophy. B. Remeu, studied Theology at the Univs. of Jena and Leipzig. His first book *Critique of all Revelation* was written after a visit to Kant. He was Prof. at Jena (1794) but was dismissed on a charge of atheism. He was subsequently appointed Prof. at Erlangen and finally at the Univ. of Berlin. The philosophy of Fichte is a system of pure subjective idealism.

FIDEI DEFENSOR SEE DEFENDER OF THE FAITH.

FIELD MARSHAL

Highest rank in the Brit. army. It dates from 1716. A Field-marshal carries a baton as a sign of his rank. The equivalent rank in the navy is Admiral of the Fleet, and in the air force Marshal of the R.A.F.

FIELD MOUSE

Several small rodents which include the long-tailed *Mus sylvaticus*, and a number of voles, all very destructive to field and forest produce.

FIELDFARE

(*Turdus pilaris*) Bird breeding in N. Europe in pine and birch forests; multitudes spend autumn and winter in Brit. They nest in colonies, and feed on grubs, slugs and berries.

FIELDING, Henry

(1707-54) Eng. novelist. B. Somerset; educ. Eton; studied law at Leyden. Wrote for the stage. Called to Bar 1740; J.P. for Westminster, 1748, where he vigorously put down crimes of violence. His first novel was *Joseph Andrews* (1742), followed by *Jonathan Wild the Great* (1743), *Tom Jones* (1749), *Amelia* (1751). See *Henry Fielding: His Life, Work and Times* by F. Holmes Dudden (1953).

FIFE

Peninsular county of E. Scot. between the Firths of Forth and Tay. It is hilly in the N.W.; the chief rivers are the Eden and Leven. The county has rich coal-mines and there is much fishing. Cupar is the county town; other places are Dunfermline, Kirkcaldy, St Andrews, Buckhaven and the new town of Glenrothes. The county returns 4 members to Parl. (2 borough constituencies). Pop. 321,000.

FIFTH COLUMN

Collaborationist group, native to one country but working for another. The term dates from the Spanish Civil War. During World War II, the Germans made use of such groups.

FIG

Genus of fruit-bearing trees (*Ficus*). The common *F. carica*, cultivated from antiquity in the Medit. region, bears pear-shaped receptacles containing nearly closed cavities within which

the flowers are fertilised. It was introduced into Eng. in Tudor times.

FIGARO

Character in comedies by Beaumarchais; a witty and resourceful servant and satirist of the privileged classes.

Fiji

Brit. crown colony consisting of c. 322 Is. in the Pacific N. of New Zealand. About 106 of the Is., which are of volcanic origin, are inhabited; the largest are Viti Levu, and Vanua Levu. The soil is fertile. There are various industries, including timber-, sugar-, rice- and oil-milling. Suva, on the S. coast of Viti Levu, is the cap. The Is. were discovered by Tasman, 1643, and visited by Capt. Cook, 1769. Ceded to Brit. 1874, they are now administered by a Governor* (who is also Consul-Gen. for Tonga and the W. Pacific) and 2 councils. Area: 7,036 sq.m. Pop. 428,000.

FILBERT

Fruit of cultivated varieties of hazel (*Corulus avellana*). A leathery husk encloses the nut-shell. It grows esp. in Kent, and is much esteemed in Amer. Larger varieties are known as cobs.

FILM

In photography the flexible material used in the making of negatives. It was first introduced for general photographic work by the Eastman Co. in 1891. The particular value of the film for cinematographic work was soon recognised by Edison, who used it first in his kinesiograph. Celluloid was originally used as the material of films, but owing to its inflammability a non-inflammable film made from cellulose acetate is now in use. See CINEMATOGRAPHY.

FINCH

Various small perching birds (*Fringillidae*). Members of family are distributed over all temp. regions except Australasia. Common Brit. resident species include Bullfinch, Goldfinch, Greenfinch and Hawfinch. The Snow Bunting is mainly a winter visitor. The Siskin, Yellow Bunting, House Sparrow, Linnet, Redpoll and the migrant Brambling are also finches.

FINGER

Terminal part of the hand composed of 3 bones called phalanges, except in case of thumb where there are only 2. Joint between each phalanx is called interphalangeal joint and that between finger and hand is called metacarpal phalangeal joint. Interphalangeal joints depend for stability on fibrous capsule and on muscle tendons. Nerves and blood vessels run down each side of finger. **Finger-Print.** Impression of the surface ridges of the human finger. As a method of establishing identity, no 2 finger-prints being exactly alike, it was introduced into the Bengal law courts in 1858. A system of classifying impressions was devised by Sir E. Henry and accepted as evidence by Brit. law courts in 1901. Police identification by finger-prints is now universal.

FINISTERRE. Cape

Most W. point of Spain in Corunna prov. scene of Anson's victory over the Fr. 1747.

FINLAND

Repub. of N. Europe, between Sweden and the U.S.S.R. and N. of Latitude 60°, with a long coastline on the Gulfs of Bothnia and Finland. The Åland Is. form a dept. It consists of a low plateau; half of the surface is covered by lakes and bogs. The winters are severe, and most of the coast is icebound for several months each year. Forests cover much of the country, with tundra in the extreme N. Agriculture is the chief occupation, particularly in the S. Livestock are reared, and dairying is developing. Lumbering is also important, and the industries of the S. are related to the resources of timber

and water power. Manufactures include paper, matches, plywood and textiles. The important towns are Helsinki, the cap., Turku, Tampere, Oulu and Pori. The pop. mainly Finnish-speaking, is predominantly Lutheran in religion. There are 3 univs. F. was an integral part of Sweden from the 12th cent. until 1809, when the country was ceded to Russia. In 1917 the Finnish indep. repub. was proclaimed, with a Pres., council of state and house of representatives, elected by universal suffrage. Area: 130,000 sq.m. Pop. 4,446,000.

FINN

(or Fionn) Legendary hero assoc. with both Ireland and Scot.

FINNISH See URAL-ALTAIC.

FINSBURY

Part of Islington, borough of Greater London (1964), includes Clerkenwell.

FIORD

[fyord] Steep-sided, narrow inlet in the sea coast found in Norway, Greenland, W. Scot., and S. Island, New Zealand.

FIR

General name for various resinous cone-bearing trees yielding useful timber. The silver fir, *Abies alba*, abounds in C. and S. Europe, often reaching 90 ft. The Norway spruce fir, *Picea abies*, may reach 170 ft. Other genera yield the hemlock, Douglas and Jap. parasol firs. The needle-like leaves of firs grow singly on the shoots, not in sheathed clusters, as in larches and pines. The Scotch fir is *Pinus sylvestris*.

Douglas fir cone

FIRE BRIGADES

All large towns and cities maintain, from public funds, trained fire brigades equipped with mobile appliances. The first scientifically organised fire-fighting brigade in Gt. Brit. was set up in 1833. Prior to 1833 fire brigades were maintained by Insurance Companies for protection of properties insured by them against fire. During World War II fire-fighting was an important part of the defence organisation against air raids in Gt. Britain. Local brigades were strengthened in men and equipment, known during 1941-7 as the Nat. Fire Service. Since World War II great advances have been made in fire-fighting and fire prevention.

FIRE DAMP

Term applied by miners to methane or marsh gas, in coal mines. When mixed with air it explodes with great violence in contact with a naked flame, hence the necessity for the use of safety lamps.

FLAEFLY

Name of certain types of beetles which possess luminous organs. The firefly of trop. Amer. belongs to the group of click beetles and is remarkable for the brilliance of the light it emits.

FIREWORKS

Devices or preparations of an explosive or inflammable nature used chiefly for purposes of display. Pyrotechny has been known in the B. from remote times. Pyrotechnic compositions

consist of substances such as charcoal and sulphur, which ignite or explode in contact with an oxygen yielding substance, such as nitre or chlorate of potash. Their manufacture is supervised by the Home Office, and is carried on under strictly controlled conditions.

FIRKIN

Measure used in Scot. for liquids, chiefly beer. It equals 9 gallons. A firkin of butter weighs 56 lb.

FIRST AID

Term used for treatment or repair given in case of sudden illness, accident or mechanical breakdown which will allow of work to be continued or transportation to more suitable surroundings where full scale remedies can be applied. As the result of wars, knowledge of First Aid to the Injured is widespread and its further development and teaching is fostered by St. John Ambulance Assoc., Brit. Red Cross Soc. and St. Andrews Ambulance Soc.

FIRST OFFENDER

In Eng. and Scots. law, a criminal who has committed only one offence. In 1887 a law was passed empowering magistrates to bind over such persons to be of good behaviour instead of sending them to prison for minor offences. Today first offenders are often put in charge of a probation officer as provided for by an Act of 1907.

FIRST REPUBLIC See FRANCE.

FISH

Loosely applied to include marine mammals, e.g. Whales, Dugongs; amphibia such as Newts; and a number of invertebrates, e.g. Cuttle-fish, shell-fish, and star-fish. It properly denotes a class of cold-blooded vertebrates living in water and breathing through gills. The body is usually covered with scales and the limbs, when present, are represented by paired fins. Reproduction is mainly by eggs fertilised after being spawned. The preservation of fish for food purposes is a large industry. At Yarmouth and elsewhere in Brit. the curing of herrings is carried out on a large scale. Salmon and other fish are canned, an important industry in Brit. Columbia and California. Cod is cured in Newfoundland and Norway. Sardines and anchovies are prepared and packed in oil in Fr., Italy and Spain. To conserve the supply of fish, hatcheries have been established for several freshwater species in Brit.

FISHER, Geoffrey Francis

(1887-) Archbp. of Canterbury (1945-61). Took holy orders, 1913. Headmaster of Repton, 1914-32. Became Archbp. of Canterbury, 1945, in succession to Dr. Temple. Ret. May 1961. Life Peerage conferred, he took the title of Lord F. of Lambeth.

FISHER, John

(c. 1469-1535) Eng. prelate. In 1527 he refused his assent to the declaration that the mar. of Henry VIII to Catherine of Aragon was unlawful, and in 1534 refused to swear to the Act of Succession. He was beheaded for refusing to recognise Henry as head of the ch. and beatified, 1886.

FISHGUARD

Urban district and port of Pembrokeshire, 12 m. N. of Haverfordwest. There is a steamer service with Cork, Waterford and Rosslare, Ireland. Pop. 4,880.

FITZGERALD, Edward

(1809-63) Eng. tr. and poet. B. Woodbridge in Suffolk. Lived quietly in Suffolk; a friend of Carlyle and Tennyson, his celebrity is due to his study of Persian and tr. of *Rubdyuti* of Omar Khayyam, pub. anonymously (1859, and 68, 72, 79, with considerable variations).

FITZROY

River of Queensland, Australia, formed by the

union of the Dawson and Mackenzie. Rockhampton stands at the head of navigation.

FIUME

[fewm-, fem'-mā] or *Rijeka*. Seaport and city of Yugoslavia, on the E. coast of the Istrian peninsula, 40 m. S.E. of Trieste. There are some manufactures but the chief industry is shipping. Until 1914 it was part of Austria-Hungary. In 1920 it was made an indep. state, but was ceded to Italy 4 years later. After World War II it was occupied by Yugoslavia and ceded to her by the treaty of 1947. Pop. 100,000.

FIVES

Game of handball for 2 or 4 players. It is played in a court enclosed completely or on 3 sides; the ball is played with the hand. The game dates from the 14th cent. In Brit. the game is played mostly at public schools.

FLAG

Popular name of various flowering herbs, with sword-shaped leaves. Several species of iris are known as flags, e.g. the yellow flag, common throughout Brit. and the blue and white flags, equally common in C. and S. Europe. The sweet flag, *Acorus calamus*, is rare in Eng. and naturalised in Scot. and Ireland. The corn flag is a *Gladiolus*, the cat-tail flag is the reed mace.

FLAG

Piece of material, usually oblong, with a distinctive design, flown as a symbol or sign. Each country has its national flag. The Union Jack is the nat. flag of Brit., and the Tricolour of Fr. It is customary to fly them at half-mast on the d. of an important person. Nat. flags are also flown over embassies and consulates. A sovereign has his standard or flag which is flown over the house in which he is at the time residing. Every ship, merchantman or warship, shows her nationality by her flag. The flag of the Brit. Navy is the White Ensign; ships of the Royal Naval Reserve and the Royal Yacht Squadron wear the Blue Ensign; the mercantile marine flies the Red Ensign. In the army the flags of regts. are known as colours. See ENSIGN.

FLAGSHIP

A warship from which an admiral commands a squadron of ships and which wears a distinctive flag to denote his presence. The *Victory* was Nelson's flagship at Trafalgar; the *Iron Duke* Jellicoe's at Jutland. A flagship, like any other vessel, has her own capt. and officers.

FLAGSTONE

Hard, fine-grained sandstone capable of being split into thin slices. It has a close texture, great durability and a non-slippery surface, and is used for paving stones, steps, etc. York stones, comprises stones varying in colour from whitish to blue, brown and mottled. The Craigleith flagstone from Scot. is a whitish grey.

FLAMBOROUGH HEAD

Chalk promontory on the coast of the E. Riding, Yorks. with a lighthouse and numerous caves.

FLAME

Burning gaseous matter. Normally due to its union with oxygen in the air, when the temp. is raised sufficiently. In a coal fire the temp. of the flame is seldom above 1,000° C. A Bunsen burner may reach 1,800° C. and an oxy-acetylene flame 3,500° C.

FLAME FLOWER

Perennial flowering herb. Also called the red-hot poker, it is native to S. Africa, but flourishes in Brit.

FLAMINGO

Tall wading birds intermediate between ducks and storks. They are widely distributed in the warmer regions except Australia, and are long-

necked and long-legged. Their beaks serve as scoops when the head is twisted upside down. They are found in great flocks, particularly near the great lakes in C. Asia. The European *Phoenicopterus fuscus* breeds in the Medit. region, and makes conical mud nests. The plumage is rosy white, with black marks on the wings.

FLAMSTEED, John

(1646-1719) Eng. clergyman and 1st Astron. Royal. B. Derby, Derbyshire, and educ. at Camb. On the estab. of the Royal Observatory at Greenwich in 1675 he was apptd. Astron. Royal by Charles II. He pub. his catalogue of the fixed stars.

FLANDERS

Name given to a district of the Low Countries now comprising Nord and Pas de Calais depts. In Fr. E. and W. Flanders prov. in Belgium and the S. part of Zeeland in the Netherlands. From 1385 to 1477 it was part of Burgundy and later a Sp. possession. In the 17th cent. Fr. acquired a portion and in 1830 the remainder became the kingdom of Belgium. In both World Wars there was heavy fighting in Flanders.

FLAT-FISH

Fishes like plaice, dab, sole, etc. with compressed and flattened bodies, the eyes and nostrils twisted round to the upper side, and the mouth aw.v. The fish swims on one side, and the under side is colourless; the other, darkly pigmented, changes colour protectively. The transparent and perfectly symmetrical young gradually acquire the asymmetrical form of the adult. Almost all flat-fishes are marine. Common edible species include turbot and halibut.

FLAUBERT, Gustave

(1821-80) Fr. novelist. B. Rouen; studied law; travelled. Pub. 1856, *Madame Bovary*, for which he and his pub. were prosecuted for 'an offence against morals' but were vindicated; *Salammbô* (1862); *L'Education Sentimentale* (1869); *Bouvard et Pecuchet* (unfinished 1881). He was an invalid after 1843. See *Flaubert* by Philip Spencer (1952).

FLAX

Fibre used for linen thread and the plant which produces it. The annual herb, *Linum usitatissimum*, has narrow lance-shaped leaves and purplish-blue flowers. Flax grows in Europe, notably in Russia, also in Ulster, Yorkshire and elsewhere. The tissues of the stems when woven form linen. The seed yields linseed oil, the residue being useful cattle food.

FLEA

Small wingless insects, mostly parasitic on mammals and birds. The mouth parts are adapted for piercing and sucking and the adult insect lives on blood, its bite being troublesome. Owing to the length of its hind legs, the flea is able to leap, in some species, 200 times its own length. The human flea, *Pulex irritans*, breeds in dirty houses. Rat fleas, *Xenopsylla*, convey plague.

FLEABANE

Several herbs of the family Compositae. Their soap-like odour is reputedly obnoxious to fleas.

N.E.

Two Brit. species of *Pulicaria* extend to India. There are 3 Brit. species of *Erigeron*, and the Canadian species, *E. canadensis*, is naturalised in Brit. Another fleabane, *Inula conyzia*, is ploughman's spikenard.

FLECKER, James Elroy

(1884-1915) Eng. poet and dramatist. Educ. Uppingham and Oxford; consular service; d. of tuberculosis at Davos, Switzerland. His works include: *The Golden Journey to Samarkand* (1913) and a play *Hassan* (pub. 1922).

FLEECE

Coat of the living sheep removed at one shearing. Fleece wools are distinguished from dead wools, which are not derived from the living animal. The fleece, after the shearing with hand or power implements, is roughly trimmed and bunched together ready for baling.

FLEET

River of London, now merely an underground stream. It rose at Hampstead and flowed into the Thames at Blackfriars. It gives its name to Fleet St. Fleet Prison, a historic London prison taking its name from the Fleet stream. It is as a prison for debtors that its chief claim to notoriety lies. It was destroyed twice, rebuilt in 1782, and finally sold to the corporation of the city (1844) and pulled down.

FLEET AIR ARM

It originated in 1912 as the Naval Wing of the Royal Flying Corps and was renamed Royal Naval Air Service in 1914. In 1918 the R.F.C. and R.N.A.S. were merged to form one service, the R.A.F. controlled by the Air Ministry. In 1937, ship-borne aircraft were placed under the Admiralty and the Naval Air service was named Fleet Air Arm. In World War I, aircraft, mostly seaplanes, were used for reconnaissance, etc. at sea on a limited scale. When World War II began in Sept. 1939, *Hermes*, the first specially designed carrier was in service. *Ark Royal*, the first carrier of post-war design, joined the Fleet in 1939, and was torpedoed off Gibraltar, 1941. During World War II the regular fleet carriers, specially designed light-carriers, and many ships converted for the purpose and equipped with aircraft adapted for use at sea, gave continuous protection to fleets at sea, to convoys and to invading forces.

FLEETWOOD

Borough, port and resort of Lancs 9 m. from Liverpool. There are steamer services to the Is. of Man. Pop. 330.

FLEMING, Sir Alexander

(1881-1955) Brit. bacteriologist and discoverer of penicillin. B. Loudoun, Ayrshire; graduated London; F.R.S. 1933, knighted, 1944. In 1945 shared the Nobel Prize for Medicine with Sir Howard Florey; Prof. of Bacteriology, Univ. of London, from 1928-48; Rector, Edinburgh Univ. 1951. In 1928 a spore of the mould of *penicillium notatum* came through the window of his laboratory. This was found to be deadly to bacteria on his slide. See *Penicillin*.

FLEMING, Sir John Ambrose

F.R.S. (1849-1945) Electrical physicist. B. Lancaster, he was Prof. of Electrical Engineering at Univ. Coll. London, 1885-1926. His invention of the thermionic valve, patented in 1904, led to the development of telecommunications, electric light, radio, television, and electronics.

FLEMINGS

Inhabitants of Flanders (q.v.). Many of them settled in E. Eng. They brought with them the weaving industry. In the 12th cent. Henry I settled some of them in Pembrokeshire. Today Belgium is inhabited by Flemings, who speak Flemish and inhabit Flanders and other parts in the N.W., and Walloons who speak Fr. and live in the S.E. Flemish. W. Germanic language descended from the speech of the Salic Franks settled at mouth of the Scheldt in 1st

cent. B.C. It is spoken by 5,000,000 Belgians and by 200,000 French.

FLETCHER, John

(1579-1625) Eng. dramatist. B. Rye, Sussex. He wrote 30-odd plays, about 15 of them in collaboration with Francis Beaumont. (1584-1616) and some others with Massinger and Rowley and other dramatists: *The Faithful Shepherdess* (printed by 1610) is his own; *The Knight of the Burning Pestle* (1609), *The Maid's Tragedy* (1611) with Beaumont; *The Two Noble Kinsmen* was pub. in 1634 as by Fletcher and Shakespeare.

FLINDERS, Matthew

(1774-1814) Eng. naval capt. 1795-9, he carried out numerous explorations, made surveys of the Austral. coasts and circumnavigated Tasmania.

FLINT

Opaque, cryptocrystalline form of silica. It is dark grey or dark brown, breaks with a shell-like fracture, and occurs in nodules, tabular masses and veins, in the chalk formations of Brit. and W. Europe. Flint was employed for buildings in medieval times. Starting in prehistoric times, flints were struck with iron pyrites to produce fire. The artificial flaking of flints by sharp blows of hammer stones gave rise to flint implements, characteristic of the Stone Age.

FLINTSHIRE

County of N. Wales, between the estuary of the Dee and Denbighshire. It is mainly lowland and is watered by the Dee and Clwyd. Coal and lead are mined; iron and steel, artificial silk, flannel, cement are manufactured, and agriculture is important. Mold is the county town; other towns are Rhyl, Flint, Holywell, Buckley and Prestatyn. F. returns 2 members to Parl. Pop. 150,430. Flint, Borough and market town of Flintshire on the estuary of the Dee 12 m. N.W. of Chester. It was an important seaport before the estuary silted up with sand, and was formerly the county town. Industries include chemicals, lead and coal-mining. Pop. 13,790.

FLODDEN

One of the Cheviot Hills, 3 m. from Coldstream and near the Till. A battle was fought here between the Eng. and the Scot. Sept. 9, 1513. The Eng. gained a great victory, James IV and his bodyguard of nobles being among the slain. Flodden was one of the most disastrous events in the hist. of Scot.

FLOOD

Inundation of low-lying ground. Generally caused by an overflow of water from a river. In the case of great rivers such as the Mississippi, Hwang-ho and Nile, floods have played an important part in modifying the features of surrounding areas. Ancient Egyptian, Babylonian and other ancient lirs. refer to floods in which whole civilisations perished.

FLORENCE

(Ital. Firenze) City of Tuscany, Italy, on the Arno, 55 m. from its mouth in the Ligurian Sea. A manufacturing and railway town, it is chiefly a centre of culture, having assoc. with Dante, Boccaccio, Machiavelli, Michelangelo and the Medici family. Among the fine buildings is the great cath. with the campanile by Giotto. Founded by the Romans, Florence became a rich trading town, and from 1250 an independent and powerful city. It was disturbed by the struggle between the Guelphs and Ghibellines. Great prosperity followed, and Florence ruled over most of Tuscany, with Pisa as its seaport. In the 15th cent. the rich family of the Medici (q.v.) became masters of Florence. Florence remained the cap. of the grand duchy of Tuscany until 1860, when it was included in the Kingdom of Italy. From 1865-71, Florence was the cap. of Italy. Pop. 438,138.

FLOREY, Sir Howard Walter

(1898-) Pathologist. B. Adelaide, Australia. Became Prof. of Pathology at Oxford 1935. He shared the Nobel Prize for Medicine with Sir A. Fleming (q.v.) in 1945.

FLORIDA

State of the U.S.A. in the extreme S.E. It consists mainly of a peninsula between the Atlantic Ocean and the Gulf of Mexico. In the S. is a swampy region, the Everglades. Agriculture is the chief industry, and sugar, rice, cotton, tobacco and trop. fruits are grown. Fishing is important, and there are valuable forest reserves. Tallahassee is the cap. but Jacksonville and Tampa are larger. Miami is a famous resort on the S.E. coast. F. was discovered in 1513, and was bought by the U.S.A. from Spain, 1819, becoming a state in 1849. It sends 12 representatives to Congress. Area: 58,560 sq.m. Pop. 4,951,560.

FLOUR

Small flatfish (*Pleuronectes flesus*) allied to the plaice. It is also called the fluke. It inhabits N. European coasts from the Eng. Channel to Iceland, dwelling in river waters and descending to the sea to breed. It rarely exceeds 12 in. in length and 1½ lb. in wt.

FLOUR

Term denoting esp. the ground contents of the wheat seed. Similar meals from other grasses and from non-cereal plants usually bear qualifying or variant names, e.g. cornflour, oatmeal and arrowroot. The wheat kernel, which is nine-tenths of the seed, the remainder being skin and germ, consists of starchy matters (73.5%), gluten and other proteins (11%), fats and minerals (3.5%) and water (12%). See WHEAT.

FLOWER

Part of a plant containing the reproductive organs. It is composed, in its most complete form, of 4 distinct whorls of modified leaves: (1) The outer whorl or calyx consists of sepals, usually green. (2) The corolla consists of petals, often coloured and sometimes forming a tube, their length, form and odour often being adapted to assist insect fertilisation.

sepals and petals together form a perianth (3) The stamens, which bear pollen grains, or male cells, in anthers, mounted on filaments (4) The pistils, in which ova, or female cells, in ovaries are surmounted by styles bearing stigmas. Stamens and pistils are essential to reproduction, although in some cases each plant bears flowers of one sex only.

FLUKE

Flat sucker-bearing parasitic worms. The Common Liver Fluke, *Fasciola hepatica*, passes its adult life in the livers of sheep, producing an incurable rot.

FLUORESCENCE

Conversion of short-wavelength radiation (such as X-rays or ultra-violet) into radiation of longer wavelengths (such as visible light). Materials displaying fluorescence include zinc orthosilicate, barium sulphide, calcium tungstate and others. Fluorescent screens are used in cathode-ray oscilloscopes, television sets and in radiography.

FLUORINE

A pale yellow gaseous element, which attacks and decomposes materials, forming fluorides. Discovered by Scheele in 1771. Its density is 1.3 times that of air. Chem. Sym. F.

FLUORSPAR

[fluor'-] Mineral consisting of fluorine and calcium, found in veins and often assoc. with lead ore. It may be colourless, yellow, blue, green or violet. In Derbyshire it is known as Blue-John.

FLUSHING

Seaport and resort of the Netherlands, in the Scheldt estuary, with cross-channel services. Pop. 20,600.

FLUTE

A woodwind instrument, consisting of a cylindrical tube c. 2 ft. long with a hole in the side, across which the player blows. There are a number of holes opened and closed by the fingers and an elaborate key mechanism. It has an upward compass of 3 octaves from middle C. The smaller flute, the *Piccolo*, has a compass extending an octave above that of the Flute. The *Bass Flute* extends downwards to the G below middle C.

FLY

Name widely used, with or without prefix, for the winged state of many insects. Apart from Butterflies, Dragon flies, May flies and Caddis flies, strictly pertains to the 2-winged order, *Diptera*, and includes Crane flies, House flies, Bot flies, Mosquitoes, Tsetse flies, etc. The mouth parts form a proboscis for piercing and sucking. Some flies are blood-suckers, many others have a destructive maggot stage; in some the larvae are parasitic, in some aquatic. The widespread House fly, *Musca domestica*, is a disease carrier and, because of its rapid breeding, a dangerous pest.

FLY-CATCHER

Large family of small insectivorous perching birds. They pursue their prey on the wing, and abound in the trop. regions of the world. The Spotted Flycatcher, *Muscicapa striata*, is a summer visitor to Brit. The Pied F., *M. hypoleuca*, frequents hilly, well-wooded districts. The Paradise Flycatchers of E. Asia have brilliant plumage.

FLYING BOAT

Aircraft with a buoyant boat-shaped body which floats in the water. Much used for patrol work by the R.A.F. Coastal Command during World War II.

FLYING BOMB See V. WEAPONS.**FLYING DOCTOR SERVICE**

Austral. service designed to give speedy aid to anyone taken ill in isolated areas. The system is based on the use of *transceivers* capable of transmitting and receiving vocal messages for distances exceeding 400 m., by means of which cases are discussed and treatment indicated.

FLYING FISH

Name denoting 2 genera of trop. and sub-trop. marine fishes. They are the Flying Herrings, *Exocoetus*, and Flying Gurnards, *Dactylopterus*. Their long pectoral fins, acting when distended as parachutes, sustain them in the air against the wind, sometimes for 500 ft. They fly to escape the attacks of predatory fishes.

FLYING FOX

(*Pteropus*) Fruit bat of the tropics of the old world. The largest is the Javanese Kalong, *P. edulis*, with a wing-spread of 4.5 ft., others, in India and Queensland, damage gardens. Nocturnal in their habits, they slumber by day head downwards.

FLYING SAUCERS

Colloq. name for mysterious objects mostly of circular shape and of varying sizes. Observers state that they are noiseless, travel at enormous

speeds and that they can remain stationary in the air. Reports were at first received with scepticism but there is a growing body of opinion that they have an extra-terrestrial origin.

FLYING SQUID

(*Ommastrephes*) Widespread cuttle-fish, esp. common in the warmer seas of the world. Long and tapering, they leap, by means of their large lateral fins, high out of the water. The Sea Arrow (*O. sagittatus*), frequent in Scot. firths, is a common cod bait off Newfoundland, and an important food of Sperm Whales. It may be 4 ft. in length.

FOCH, Ferdinand

(1851-1929) Fr. soldier. On the outbreak of war in 1870 he joined the army. In 1894 he was appointed Prof. of Milit. Hist. at the Staff Coll. In World War I, Foch became head of the 9th army, which had a great share in the victory of the Marne (Sept. 1914). He was prominent in directing the operations on the Somme, July, 1916. In the following Mar. 1918 he was apptd. generalissimo of all the armies on the W. front, Fr., Br., Amer. and Belgian. In that capacity he controlled the movements of the final advance.

FOG

Atmos. condition of low lying cloud or thick mist, due to the presence of dust particles around which a film of water is deposited when the temp. falls suddenly below dew point. These drops, in the absence of wind, may remain in suspension for a long time and thus form the white fogs of the countryside and the dense black fogs of large towns where sooty particles predominate. Over the sea a current of warm air passing over a cooler layer, or over icy waters, causes condensation to occur, resulting in thick fogs, as off Newfoundland. See SMOG.

FOLK-DANCING

Dancing uninfluenced by urban or professional tendencies and peculiar to a particular people, nation or country. The preservation of folk-dancing in Eng. is largely due to the work of Cecil Sharp who founded the Eng. Folk Dance Soc. in 1911. It may be classed under 2 heads (1) social, when it is danced purely as a pastime by all; (2) ceremonial, when performed by selected performers to mark a definite occasion.

FOLKESTONE

Large port and port of Kent, on the Eng. Channel. There is a steamer service with Boulogne. Pop. 44,390.

FONTAINEBLEAU

[fôn-'blô'] Fr. town in Seine-et-Marne dept. c. 37 m. S.E. of Paris. It is famous for the magnificent palace built by Francis I and improved by later kings.

FONTEYN, Dame Margot

(Peggy Hookham) (1919-) B. Reigate, Surrey. Made her debut in 1934 with Sadler's Wells in *The Haunted Ballroom*. As Brit. prima ballerina, she has appeared in most well-known ballets. Mar. Dr Roberto Arias, Feb. 1935. Undoubtedly owes much of her success to Ninette de Valois (q.v.).

FOOD

That which nourishes the body of man and other members of the animal world. Man's food may be divided into 2 classes: the flesh of animals and the produce of the soil. Today, except for certain fruits, nearly all the food eaten by man is cooked or prepared. In general, those who live in cold latitudes require more food, esp. that containing fat. Improved methods of treating the soil, esp. with artificial fertilisers, and new strains of plants have increased output. There is, however, the problem of feeding a constantly increasing population. See FOOD and AGRICULTURAL ORGANISATION. Diet. The essentials of a proper diet are

that it should provide for growth and the replacement of waste, that it should furnish the heat and energy required by the body, and also a measure of stimulation to metabolism. Analysis shows that foods are made up of proteins or nitrogenous substances, carbohydrates, fats, salts, vitamins and water. The proteins, together with mineral matter and water, make good the loss of tissue due to the wear and tear of living; they also go to the making of the secretions of the body. A growing person requires a liberal allowance of proteins, contained in flesh, fish and fowl and also in wheat and other vegetable foods. Proteins also furnish a certain amount of heat and energy, but the proper sources of these are carbohydrates and fats. The amount of heat is calculated according to a unit known as a calorie. The mineral matter in foodstuffs include salts of iron, calcium, magnesium, sodium and potassium, which are necessary in tissue building. Iron is a necessary constituent of the red blood corpuscles, while sodium chloride is a constituent of blood, etc. and the source of hydrochloric acid in the gastric juice. **Regulations and Control.** In Brit. and other civilised countries steps are taken to see that the food sold in the shops is pure. The sale of diseased and unsound food is forbidden and laws prescribe a certain standard of purity. These laws are actively enforced in each county, city or district by inspectors who have power to visit shops and take samples for analysis and, if these are found to be adulterated, the vendors are prosecuted. During World War I (1914-18), the German submarine campaign and the Allied counter-blockade created an acute shortage of food which was rationed in all of the belligerent countries. During World War II rationing was again introduced in Brit. Consumption of meat, tea, sugar, butter, cooking-fats, cheese, milk and bacon was limited, each person being provided with a ration book necessary for the purchase of these foods. A system of 'points' was worked out in 1940 for the purchase of dried fruit, breakfast cereals, some tinned foods, biscuits, etc. In the yrs. following the war, the food shortage throughout the whole of Europe was acute.

FOOD AND AGRICULTURAL ORGANISATION

Organisation set up by the U.N. in Rome in 1945 to work out a programme for achieving adequate world distribution of food, now has 105 members and associates. A survey in 1946 indicated that $\frac{1}{3}$ world's pop. was underfed, hence production must be doubled. Extensive programmes of research and technical aid have been initiated.

FOOL

A medieval court jester; he wore motley and carried a bauble. At the Feast of Fools (about 1st Jan.) lower clergy of medieval Fr. and Eng. cathedrals burlesqued ch. services.

FOOT

Portion of lower limb below ankle joint. Has a similar construction to that of the hand with 5 metatarsal bones corresponding to 5 metacarpal bones and 14 phalanges corresponding to those of the hand. The most common foot troubles are corns, bunions, blisters, ingrowing toe nails and flat foot. The treatment of these conditions falls into the province of the chiropodist.

FOOT AND MOUTH DISEASE

Acute contagious fever affecting cattle, sheep, goats and swine and characterised by vesicular lesions of the mouth or feet or both. Disease is scheduled under the Diseases of Animals Act and all diseased animals and those in immediate contact must be slaughtered.

FOOTBALL

Popular ball game at first played by 2 teams of men, without any definite rules. Each side tried by sheer force to get the ball past its adversaries. The public schools each played it according to their own rules, survivals being the wall and field games at Eton and the games at Winchester and Harrow. In the 19th cent. the game was organised and rules drawn up. Of its 2 popular forms the first is the Association game. This is played with a round ball by 11 players on each side. Except by the goalkeeper the hands must not be used, the ball being propelled by the feet or head. Each match is decided by the number of goals scored, these being obtained by kicking the ball between the goal posts. Association Football, or soccer, owes its name to the fact that, 1863, a Football Assoc. was formed to draw up a set of rules. In 1871 a challenge cup was presented for competition between the clubs. There are also Scots, Irish and Welsh Assocs. each of which offers a cup. The first players were all amateurs, but soon professionalism was introduced, legalised in 1885. In 1888 a league was formed. Internat. matches are played between the 4 home countries, the players are usually professionals. The 2nd form, Rugby Union Football, is played with an oval ball and is a development of the orig. game as played at Rugby School. In 1823 William Webb Ellis picked up the ball and ran with it, and in 1841 this was recognised in the rules. Soon clubs were formed to play the game according to the Rugby rules. The Eng. Rugby Union then came into existence and similar unions were formed in other countries. It has also spread to Fr., Australia, N. Zealand and S. Africa. It is strictly an amateur game. Rugby is played with 15 players a side. There are several methods of scoring, the chief of which is to score a try by grounding the ball behind the opponent's back line. This counts 3 pts. and enables the side gaining it to kick at goal without interference, if the ball goes over the bar and between the posts a further 2 pts. are added. If, while the ball is in play, a dropped goal is scored, 3 pts. are awarded. Internat. matches are played between the 4 home countries, and Fr. From time to time teams from S. Africa, N. Zealand and Australia come to Brit., and Brit. teams go overseas. A 3rd form of football is the Rugby League game. This came into existence in 1895 when the Rugby Union refused to allow professionalism. Some Rugby clubs in Lancashire and Yorkshire then broke away, formed the N. Union and began to play a slightly different kind of game. The number of players was reduced from 15 to 13 and other changes made for a more open and spectacular game. This game is much played in Australia, Fr. and N. Zealand. The Rugby League Assoc. now controls the game. Further purely domestic variations of the game have been evolved in the U.S.A., Australia and Canada. Gaelic football (Ireland) is played with a round ball. Football Pools. In Brit. some 10,000,000 people participate in this form of gambling. The money thus invested reaches an annual total of c. £60,000,000.

FORD, Henry

(1863-1947) Amer. manufacturer. B. Greenfield, Michigan, he became interested in mechanics and experimented in motor car manufacture. In 1903 he started the business that grew into the Ford Motor Co. There are factories at Manchester and Cork, and extensive works at Dagenham. Succeeded as Pres. of Co. by

grandson Henry Ford II, son of Edsel Ford (d. 1943).

FORD, John
(1586-1640) Eng. dramatist. His tragedies include *'Tis Pity She's a Whore* (1633), *Perkin Warbeck* (1634).

FOREIGN LEGION

Corps of the Fr. Army. Trained very rigorously and cut off from European life, the legion has won great reputation as a fighting corps.

FOREIGN OFFICE

Department of the Brit. govt. responsible for all political affairs concerning other countries and which controls all ambassadors and other official representatives abroad. Its head is a sec. of state, usually a cabinet min.

FOREST

Word used orig. for a tract of woodland where in wild beasts lived. In Europe these were used by the kings for hunting, and forest laws were passed to prevent any interference with this sport. The area under forest is now much reduced. Eng. has very few, the largest being the New Forest. Fr., Germany and other countries have more, while Scot. has extensive areas of deer forests. There are also vast forest areas in Canada, India and other countries, used for timber and state owned. See AFFORESTATION.

FORFAR

Burgh and county town of Angus, 15 m. N. of Dundee. There are linen and other manufactures. Pop. 10,319.

FORFARSHIRE See ANGUS.

FORGERY

In Eng. and Scots law, the uttering of a false document, or material alteration therein, without authority; also counterfeiting a seal or die. The forging of documents, such as wills, deeds or bank notes is a felony and can be punished by imprisonment for life.

FORGET-ME-NOT

Various annual or perennial herbs (*Myosotis*). Native to temp. regions, the common *M. scorpioides* has rather stout, flexible stems, and sky-blue flowers. The wood forget-me-not, *M. sylvatica*, has bright blue flowers; the Alpine sub-species is a dwarf.

FORMALDEHYDE

HCHO. Simplest of the aldehydes, oxidation products of alcohols. Formaldehyde is produced by passing methyl alcohol vapour over heated platinum. A 40% solution in water (formalin) is a disinfectant, an antiseptic, and renders gelatine insoluble in water. Formaldehyde is of great importance in the manufacture of synthetic resins and plastics.

FORMIC ACID

HCOOH. Simplest of the fatty acids. First obtained from ants by distillation with water. It is now obtained by the distillation of sodium formate with a mineral acid. It has a pungent odour and a blistering effect upon the skin. It is used in dyeing.

FORMOSA See TAIWAN.

FORT DE FRANCE

Cap. and chief commercial town of the Is. of Martinique, Fr. W. Indies. Pop. 60,600.

FORT SUMTER

Fort in S. Carolina, U.S.A. on an Is. off Charleston. Its bombardment by the Southerners on Apr. 12, 1861, opened the Amer. Civil War.

FORT WILLIAM

Town and resort of Inverness-shire, 65 m. from Inverness, on the banks of Loch Linnhe. Built 1665, it lies near the S. end of the Caledonian Canal, at the foot of Ben Nevis. Pop. 2,759.

FORTH

River and estuary of S.E. Scot. The river rises in Perthshire and flows to Alloa, where the fifth

or estuary is said to begin. Stirling stands on its banks, and tributaries include the Teith, Devon and Allan Water. It is navigable by small vessels to Stirling. The estuary from Alloa to the N. Sea at Fife Ness is c. 50 m. long. On its banks are Leith, Granton, Grangemouth, Burntisland and Methil. The Forth Railway Bridge carries the line from S. Queensferry in W. Lothian to N. Queensferry in Fife. Designed by Sir W. M. Arrol (1839-1913), the bridge was begun in 1883 and opened for traffic in 1890. It is 1 mile 972 yds. long and consists of a S. Viaduct (10 spans) a N. approach viaduct (8 spans) and 2 great central spans. The clearance above high-water mark is 150 ft.; the piers are 340 ft. high. The cost was £3,000,000. The Forth Road Bridge, opened 1964, is a suspension bridge with a span of 3,300 ft. The two 24-ft. carriageways, with cycle tracks and footpaths, stand 150 ft. above the highest tide marks.

FORTRESS

Place suitable for defence protected by some artificial works, e.g. walls, ditches, etc. Orig. a mound with wood fences, stone fortresses were used by the Gks., e.g. at Troy. The medieval castle was a highly developed form, rendered useless by the invention of artillery.

FORUM

[faw'-] In Rom. times any open place devoted to public business. It was the official centre of a city's public and corporate life, and was usually surrounded by its chief public buildings, and often ornamented with statues.

FOSSIL

Traces of plants or animals in the earth's crust, where they have been embedded by geological agencies. The dating of strata by fossils is fundamental in geological research. The effect of time may be to alter the form or chemical constitution of buried organisms by petrification. Thus, molluscan shells may be preserved unchanged, may be converted into silica, or may disappear, leaving only an external or internal cast. Rocks may perpetuate traces of footprints and even rain drops.

FOTHERINGHAY

Village of Northants. on the Nene, 4 m. N.E. of Oundle. In the castle Mary Queen of Scots was tried and executed (1587).

FOUCHÉ, Joseph

Duke of Otranto (1763-1820) Fr. statesman. Elected to Nat. Convention, 1792; voted for execution of Louis XVI. From 1799-1815, though with interruptions, was Min. of Police. Pres. of Council under Louis XVIII. with whom he intrigued before Napoleon's fall.

FOURTH DIMENSION

The three dimensions of length, breadth (or width) and thickness are generalisations or abstractions founded on our normal sense-perceptions. The mathematician postulates a 4th dimension and this has been confirmed, esp. in the work of Einstein, who, in his theory of relativity, suggests a dimension which welds indivisibly the 3 spatial dimensions with that of time to form a curved 'continuum', i.e. space-time.

FOWEY

[foyl] Borough and resort of Cornwall, on the estuary of the Fowey, 10 m. S. of Bodmin. There is a good harbour, with some shipping and fishing. Pop. 2,090.

FOX

(*Vulpes alepex*) The common Brit. fox averages 4 ft. in length, including the tail, is 14 in. high, weighs from 15-22 lb. and is reddish-brown with white-tipped hairs. The female is known as a vixen and the young as cubs. The N. Amer. Silver or Black Fox yields a silver-tipped, black fur. The Arctic Fox, *V. lapopus*, is entirely white in winter or may be slaty-blue

throughout the year. **Foxhunting.** Brit. sport at least 300 years old. Foxes are hunted chiefly in the Shires of Leicester, Northampton and Warwick in Eng. Among the most famous Hunts are the Pytchley, Buccleuch, Beaufort, Quorn and Belvoir. A pack of foxhounds usually numbers approx. 35-couple. Conventional rules of conduct on the hunting field are strictly observed.

FOX, Charles James

(1749-1806) Eng. politician. M.P. (Whig), 1769-1806. Fox favoured the reform of Parl., Catholic emancipation, and Amer. indep. His support for the Fr. Revolution and opposition to Pitt cost him Burke's friendship and much support.

FOX, George

(1624-91) Founder of the Soc. of Friends. He became a shoemaker, but gave his time to preaching. He believed in the guidance of the inner light. He soon had followers in many places. These met regularly for worship and were called Quakers.

FOX TERRIER

House dog with smooth or wire-haired coat. Both smooth and rough-coated are black and white or liver and white in colour. Fox terriers are compact, clean-legged, cat-footed and straight-fronted. Excellent ratters, they weigh c. 16 lb.

FOXE, John

(1516-87) Eng. martyrologist. Soon after the accession of Mary he went to Frankfurt, where he met Knox. In 1562-3 he pub. his great work, popularly known as *The Book of Martyrs*.

FOXGLOVE

Genus of hardy biennial or perennial herbs (*Digitalis*), natives of Europe, W. Asia and N. Africa. The only Brit. foxglove, *D. purpurea*, has spikes of drooping, thimble-shaped pink flowers, spotted inside. The leaves yield digitalin used in medicine.

FOXHOUND

Breed of hound maintained for fox hunting. It averages 20 or 22 in. in ht. It is notable for fleetness, strength, fine scent, endurance and subordination.

FRACTION

In maths. any part of a unit. In common or vulgar fractions the number above the bar is termed the numerator and the number beneath the bar the denominator. Thus in the fraction $\frac{3}{8}$, 3 is the numerator and 8 the denominator. In decimal fractions, the denominator is 10 or some power of 10, a dot or decimal point being placed before the number. Thus .1 represents 1-tenth, .325 equals 3-tenths plus 2-100ths plus 5-1,000ths. See DECIMAL.

FRAIGNARD, Jean Honoré

[frag-ô-nar'] (1732-1806) Fr. artist. B. Grasse, he made a reputation with pictures of contemporary life and landscapes.

FRANCE

Repub. of W. Europe stretching from the Eng. Channel to the Pyrenees and the Medit., and from the Atlantic E. to the land frontiers of Belgium, Germany, Switzerland and Italy. The N. and W. of the country is lowland, broken

only by the hills of Brittany and Normandy; the S. and E. is highland, including the great plateau of the Massif Central, the Cévennes and Fr. Alps, the Jura and Vosges Mts. The chief rivers are the Loire and Garonne, flowing W. to the Bay of Biscay, the Seine and Somme entering the Eng. Channel, and the Rhône flowing S. into the Medit. The climate is of a maritime type, modified to the E. by the mts. In the extreme S. the climate is Medit. Fr. is a great agricultural country. A great quantity of wine is produced and exported, e.g. in the Bordeaux, Burgundy and Champagne districts. Fruits are grown. There are many industrial centres, such as Paris and Lyons and the district in the N.E. where there is a valuable field of coal and iron ore. Large quantities of silk and cotton goods, iron, steel and chems. are exported. The fisheries are valuable. Paris is the cap. and largest city. Next in size are Marseilles, the great seaport, Lyons, Toulouse, Bordeaux, Nice, Nantes, Lille, St. Etienne and Strasbourg. Before the Revolution, Fr. was divided into provs. and some of these retain something of their old indep. life. Today the country is divided into 90 depts., including the Is. of Corsica. The head of the govt. is the Pres. who is elected for 7 years by direct universal suffrage according to the 1962 amendment to the Constitution. (In 1965 General de Gaulle was re-elected by this method.) He presides over the Council of Ministers and appoints the P.M. Pop. 46,520,000. Area: 212,919 sq.m. As part of the Rom. Empire, Fr. was one of the most civilised regions of Europe. Later it was conquered by the Franks and became part of the empire founded by Charlemagne. Early in the 11th cent. it had its own kings, but much of the land was under powerful dukes and counts. In the later M.A. the hist. of Fr. is largely one of wars with Eng. This period ended in the 15th cent. and then Fr. under the Valois and later the Bourbon kings, became the most centralised monarchy in Europe. The kingdom reached the height of its glory under Louis XIV (1643-1715), when it led the social life of Europe. It was at that time a great milit. nation, and enjoyed a great flowering of intellectual life, but there was also extravagance and corruption and great injustice towards the poor. The Revolution destroyed the monarchy and set up a repub. in 1790. Then came the empire of Napoleon which ended in 1815, after which the Bourbon monarchy was restored. This lasted until 1830, when Louis Philippe became king, he was overthrown in 1848 and a 2nd repub. establd. From this Louis Napoleon emerged as the Emperor Napoleon III and reigned until 1870. The 3rd Repub. was created after the Franco-Prussian War in 1871. It carried through to World War I and when peace was achieved, turned to the task of restoring and strengthening Fr. It was allied with Brit. in 1939 and overrun by the Germans in 1940, being partially occupied. The Govt. under Marshal Pétain, was transferred from Paris to Vichy. Gen. de Gaulle formed a provisional Nat. Govt. in Eng. and establd. the Free Fr. movement. The country was liberated in 1944. A new constitution was accepted in 1946 and Vincent Auriol became pres. of the 4th Repub. This was dissolved in 1958 and the 5th Repub. inaugurated under Gen. de Gaulle. See FRENCH REVOLUTION.

FRANCE, Anatole

FRANCIS

Name of 2 Emperors. Francis II (1768-1835) Emperor of Austria and the Holy Rom. Empire, was the brother of Marie Antoinette, and from 1792-1814 was often at war with Fr. His daugh-

ter, Marie Louise, became Napoleon's wife, but in 1813 he joined the allies and assisted in the final defeat of the emperor. Francis was the last emperor of the Holy Rom. Empire, which was dissolved in 1806, and the first Emperor of Austria.

FRANCIS

Name of 2 kings of Fr. **Francis I** (1494-1547) mar. in 1514, Claude, daughter of Louis XII, and succeeded to the throne in 1515. His reign was largely occupied by his wars against the Emperor Charles V. His son became Henry II. **Francis II** (1541-60) Eldest son of Henry II and Catherine de Medici. He mar. Mary Stuart in 1558 and in 1559 succeeded as king.

FRANCIS of Assisi, St.

(1182-1226) B. at Assisi in Umbria. A serious illness led to his conversion, and he devoted his life to poverty, self-denial, and the service of the poor. He formed a brotherhood which received papal sanction in 1210 and became the great *Franciscan Order* devoted to poverty, work and service. Some missions still survive.

FRANCIS FERDINAND

(1863-1914) Aust. archduke, nephew to the emperor Francis Joseph. On the d. of the Crown Prince (1889) he became heir-apparent. Whilst on a visit to Bosnia, he and his wife were assassinated at Sarajevo, an event which precipitated World War I.

FRANCIS JOSEPH

(1830-1916) Emperor of Austria and king of Hungary. He was the eldest son of the Archduke Francis, a grandson of the Emperor Francis II and a member of the house of Habsburg. His 60 years' reign was one of nat. and personal misfortune. The defeat of Austria by Prussia in 1866 was the end of her long dominance in German affairs. With innate stubbornness the emperor held on, and towards the end took the fatal step of attacking Serbia, after the murder of his nephew and heir, Francis Ferdinand.

FRANCK, César Auguste

[frank] (1822-90) Belgian composer. He settled in Paris in 1844. He was a prolific composer but his works are uneven in quality. He wrote organ music, a symphony, Prelude, Choral and Fugue for Piano, a sonata for Violin and Piano, and a Piano Quintet.

FRANCO, Francisco

(1892-) Sp. gen. and dictator. Chief-of-Staff, 1937, organised milit. revolt, July, 1936, and proclaimed himself Caudillo and C.-in-C. Oct. 1936. Revolt threw Spain into Civil War (1936-9) in which Franco was aided by Mussolini and Hitler. Joined Anti-Comintern Pact, 1939, during World War II Spain maintained neutrality but had Fascist sympathies. Form of govt. is authoritarian, and the 'Falange' (Sp. Fascist Party) is the sole permitted polit. organisation.

FRANCO-PRUSSIAN WAR

Struggle in 1870-71 between Fr. and Prussia. There was some tension because Napoleon III, then ruling Fr., objected to the selection of a German prince as king of Spain. Bismarck, who wished to weaken Fr., precipitated the struggle by altering and publishing a telegram from Ems which made it appear that the King of Prussia had insulted the Fr. Ambassador. War was declared by Fr. on July 19. German victories forced a large Fr. army to take refuge in Metz. The decisive Battle of Sedan ended in the surrender of Napoleon and his army. The Germans then besieged Paris from Sept. 20 until its surrender in Jan. 1871. Fr. agreed to surrender Alsace-Lorraine and to pay a huge indemnity. At Versailles, Jan. 18, 1871, William I of Prussia was declared Emperor.

Returning to Philadelphia he became owner of *The Pennsylvania Gazette*, and in 1732 started the popular *Poor Richard's Almanac*. In 1757, Franklin went to London, and remained there until 1762 and from 1764-75. In 1776 he helped to draw up the Declaration of Indep. and went to Paris where he arranged for the help of Fr. in the struggle with Brit. He was Pres. of the State from that time until he retired in 1788, and helped to draw up the constitution of the U.S.A. Much of his time was spent in scientific research, particularly on electricity.

FRANKLIN, Sir John

(1786-1847) Eng. explorer. In 1845 he set out in search of the N.W. Passage, and for many years nothing was heard of him. In 1859 a paper was found giving some record of the voyage and of the d. of Franklin and the entire expedition. It proved also that he had actually discovered the N.W. Passage.

FRANKS

Name given to some European tribes, first heard of in the 3rd cent. along the lower courses of the Rhine. By the 4th cent. these were collected into 2 groups, the *Riparian Franks* and the *Salian Franks*. Under the leadership of Clovis, the Salian Franks moved into what is now Fr. and in 481 he was made their king. In the 9th cent. when their land had extended in all directions, the Franks again broke into 2 divisions. The W. Franks remained in Fr. whilst the E. Franks founded what later became Germany.

FREDERICK

Name of 2 Holy Roman Emperors. **Frederick I** (1124-90) known as *Barbarossa* (Redbeard) belonged to the Hohenstaufen family. In 1155 he was crowned Emp. in Rome. To Germany he was a strong and resolute ruler, crushing the Dukes who opposed him. In Italy he was involved in quarrels with the Papacy. In 1189 he set out on a Crusade, and was drowned. **Frederick II** (1194-1250) son of the Emperor Henry VI, was chosen German King in 1196. In 1212 he was crowned king, but had to fight to estab. his position. In 1220, in Rome, he was crowned Emperor by the Pope, and in 1228, having spent some years in Sicily, he went on

158 • FREDERICK OF BOHEMIA

a Crusade and was crowned King of Jerusalem. His sons, Henry and Conrad had in turn risen against him. Brilliantly versatile, he was known as *Stupor Mundi*—Wonder of the World.

FREDERICK

(1596-1632) King of Bohemia. Son of Frederick IV, Elector Palatine of the Rhine. In 1613 he mar. Elizabeth, daughter of James I, and in 1619, being a Protestant, he was elected King of Bohemia. His enemies were too strong for him. From 1623 until his d. Frederick was an exile. Among his children were Sophia, Electress of Hanover, mother of George I.

FREDERICK IX

(1859-) King of Denmark, son of Christian X; succeeded to the throne 1947. He mar. Ingrid, granddaughter of Gustavus V of Sweden, and has 3 daughters, the eldest of whom is the heir to the throne, the Salic Law having been revoked, 1953.

FREDERICK II

(1712-86) King of Prussia called the Great. B. Berlin, son of Frederick William I. He had a very unhappy childhood, and was a virtual prisoner for some years. Later he mar. a princess of Brunswick, corresponded with Voltaire, read much in Fr. In 1740, Frederick became king, and almost at once made war on Austria. His aim was to obtain Silesia. In 1756 the Seven Years' War began. The odds against Prussia, aided only by Brit. were immense, but her king performed miracles both as general and administrator. His country was utterly exhausted when peace was made in 1763. For the rest of his reign, ruling as an absolute monarch, he did much to restore its prosperity. The king wrote a great deal, always in Fr., and his writings have been pub. in 33 vols.

FREE CHURCH OF SCOTLAND

Formed by opponents of private patronage at the disruption of the Ch. of Scot. in 1843. They formed a new ch., joined in 1876 by the Reformed Presbyterian Ch. In 1900 the Free Ch. and the United Presbyterian Ch. were united as the United Free Church of Scot., and in 1939 there was a union of this body and the establd. ch. The present Free Ch. of Scot. consists of those members of the original Free Ch. who refused to unite with the United Presbyterian Ch. The Ch. has its own Theological Coll. in Edinburgh. The curriculum is recognised by Scot. Universities, and Free Ch. students are eligible for the Degree of B.D.

FREEMAN

One who is not a slave. In early soc there was a sharp distinction between freemen and slaves, this being the case in Greece and Rome, as well as among the Germanic tribes, the freemen forming the fighting and governing class. Gradually, as slaves became free, the distinction disappeared. By the end of the 15th cent. serfdom had disappeared in Brit. In other European countries the same process took place, but at a slower rate. The word freeman was then used in Eng. for a man who had the right to take part in the govt. of the city or borough in which he lived. These privileges were greatly abused, and in 1835 they were swept away. London was an exception, and there freemen still remain. A 3rd kind of freeman came into existence in the 19th cent. These are men of distinction who are given the honorary freedom of a city or borough, now a popular way of recognising distinguished services to the state or community.

FREEMASONRY

Secret brotherhood which flourished in ancient Egypt and was known throughout the ancient

world. It teaches by use of ritual, allegory and symbol the practice of every moral and social virtue, esp. that of charity. The ritual has changed, but the spiritual principles remain unchanged, and have been transmitted in unbroken succession via Egypt, Greece, Rome and the M.A. The first Grand Lodge was establd. in Eng. in 1717, in Ireland in 1730 and in Scot. in 1736. The date of its advent in the U.S.A. is uncertain, but a lodge was establd. in Boston in 1733. The organisation consists of a no. of lodges each with its own Master and elected office bearers. Regular meetings are held at which with impressive ceremonial, degrees are conferred on candidates. The lodges are united under Provincial Grand Masters. Over all is the United Grand Lodge. On the continent Freemasonry has frequently become involved in politics, and this has occasionally led to its suppression. It is condemned as a 'secret soc.' by the R.C. ch.

FRENCH REVOLUTION

Overthrow of the establd. monarchical govt. of Fr. in 18th cent. Main causes were: distressed state of the country as a whole, out of date admin., hopeless confusion of financial system causing heavy taxation of the poor which the rich escaped, widespread corruption and extreme hardship of the poor. The ideas of Voltaire and Rousseau stirred up intellectual discontent with this state of affairs. The actual movement began in 1789 when the States Gen. was called together, for the first time since 1614, and a Nat. Assembly was called. On July 14, 1789, the mob destroyed the Bastille, and there were risings all over the country. The Nat. Assembly turned itself into an assembly for the preparation of a constitution. Many of the nobles fled to Eng. and elsewhere, but the king, Louis XVI, still had many supporters. In June, 1791, he escaped from Paris, but was brought back. The Assembly then decided to make Fr. a constitutional monarchy. Several foreign rulers were now alarmed at the course of events in Fr. and the exiled nobles were urging them to interfere. The Emperor of Austria, brother of Marie Antoinette, the wife of Louis XVI, issued a declaration, demanding that Fr. should restore Louis XVI. The Republican party was gaining strength, foreign interference only added to its influence. In March, 1792, Fr. de-

clared war on Austria. Prussia hastened to the side of Austria, but the Fr. troops defeated the Prussians at Valmy. A Nat. Convention took over the control of affairs. The extremists were now supreme, their leaders being Danton, Robespierre and Marat. A republic was estab. and on Jan. 21, 1793, after a trial, Louis was executed. In 1793, a Committee of Public Safety was estab. under Robespierre, and the Reign of Terror began, to exterminate prospective collaborationists. Hundreds of aristocrats and politicians were sent to the guillotine. On Oct. 16, 1793, Marie Antoinette was executed. The revolutionary leaders disagreed among themselves; Robespierre brought about the execution of Danton on April 5, 1794, and himself suffered the same fate on July 28. The Reign of Terror came quickly to an end, but it was not until Oct. 1795, that the Directory was estab. and the period described as that of the Fr. Revolution was over. See J. H. Thompson's *French Revolution*.

GAILEI, Galileo

[gá-lí-lá -á -lá -á] (1564-1642) B. Pisa, Italy. He made the first systematic experiment in mechanics and laid a foundation for the work of Newton. His work included the invention of the thermometer, the discovery of the law governing the vibrations of a pendulum, the first attempts to measure the speed of light and to weigh air, and the first experiments on the production of a vacuum. In 1609, he made the first astronomical telescope. He was able to overthrow the accepted doctrine that the Earth was the centre of the Universe and to estab. the ideas of Copernicus concerning the solar system.

GALL STONES

Hard concretions formed in gall bladder, assoc. with chronic inflammatory condition. Predisposing causes are over-eating and lack of exercise.

GALLEON

Large Sp. vessel of the 15th-17th cents. It served both for warfare, as in the Sp. Armada, and for transporting treasure from the Indies.

GALLEY

(1) Long, narrow boat propelled by oars. Such vessels were largely employed in the Medit. until the 16th cent. They had c. 50 oars, each worked by 5 men, usually captives or convicts.

162 • GALLIPOLI

(2) 6-oared boat on a warship, devoted to the capt.'s use.

GALLIPOLI

(now Gellibolu) Peninsula which forms European shore of Dardanelles, part of Turkish Republic since 1936. Gallipoli Campaign, 1915. In World War I, this was an attempt to force the Dardanelles and sever German-Turkish collaboration. Brit. and Fr. failed to dislodge the Turks. Severe casualties resulted both from battle and from the insanitary conditions. A gallant part was played by the Australian and N. Zealand Army Corps (ANZAC). The campaign was abandoned and Gallipoli was evacuated, 1916. See *Gallipoli* by Alan Moorehead (1956).

GALLIUM

Hard, white, ductile and malleable metal. It was discovered in 1875 by de Boisbaudran in zinc-blende from the Pyrenees. Its symbol is Ga, at. wt 69.7 and melting pt. 86° F. It softens by pressure of the fingers, and once melted remains in liquid form at low temperatures.

GALSWORTHY, John

(1867-1933) Eng. novelist and dramatist. B. Coombe, Surrey; educ. Harrow and New Coll. Oxford; barrister 1890. His novels include *The Man of Property* (1906), *The White Monkey* (1924), *The Silver Spoon* (1926). His plays deal with social problems and include *The Silver Box* (1909), *Strife* (1909), *Justice* (1910), *Loyalties* (1922). He received the O.M., 1929 and the Nobel Prize, 1932.

GALWAY

[gaw'-] County of Eire, in the prov. of Connaught, with an Atlantic coastline and many lakes. Much of the country is lowland, rising to the Connemara Mts. in the W. and the Slieve Aughty in the S. The chief rivers are the Shannon, Clare and Suck. Occupations include agriculture, fishing and quarrying. Galway is the county town. Galway includes the Aran Is. in Galway Bay. Pop. 149,887. Galway, Seaport, county town and urban district of Galway, Eire, on Galway Bay, at the mouth of the Corrib. Shipping and fishing are the industries. Pop. 22,028.

GAMA, Vasco da

(c. 1460-1524) Portuguese navigator, he rounded the Cape of Good Hope, discovered and named Natal, and crossed the Indian Ocean to Calicut. D. at Cochín. He was the first European to round the Cape and to reach India by sea.

GAMBIA

W. African state within Brit. Commonwealth, on either side of the Gambia river, surrounded by Fr. territory. The country comprises Bathurst, the cap. of Gambia, and some adjoining land. The climate is unhealthy during the rainy season, June to Oct. Ground-nuts are the chief export. Gambia was discovered, but not settled, by Portuguese sailors. In the 17th cent. a Brit. trading post was establd., controlled from Sierra Leone. It was made a crown colony in 1888, and has since been admin. by a Gov. and 2 councils. Full internal self-govt. achieved, 1963 and indep., 1965. Area: 3,977 sq.m. Pop. 315,486.

GAMBIER, Baron

(1756-1833) Eng. admiral. James Gambier joined the navy at the age of 11. In command of the Channel fleet in 1809, he refused to support Lord Cochrane in his attempt to destroy the Fr. fleet in the Basque Roads and was court-martialled, but acquitted.

GAMMA RAYS

Electromagnetic radiations emitted from radioactive materials. They are similar in properties to X-rays. The biological effects of radium are due to gamma rays emitted by its products, radium B and C (q.v.). See RADIOACTIVITY.

GANDER

Airport in E. Newfoundland, Canada, c. 130 m. N.W. of St. John's, on the transatlantic route.

GANDHI, Mohandas Karamchand

(1869-1948) Hindu polit. leader and saint (Mahatma). Barrister-at-Law, Inner Temple, London. He practised passive resistance in India after World War I in order to overthrow Brit. rule, and was frequently imprisoned. Pres. and chief influence in Indian Nat. Congress, 1924-33. Very influential because of asceticism and popularity. Undertook several fasts to end communal riots after partition of India (1947). He was killed by a Hindu fanatic, 1948.

GANGES

River of India which rises in the Himalayas, 14,000 ft. above sea level. It is first called the Bhagirathi, taking the name of Ganges after the Alaknanda joins it. It flows S.E. to Allahabad, where it receives the Jumna, then turns E. past Varanasi and Patna. S. of its confluence with the Brahmaputra the vast delta begins. It enters the sea by several mouths, one being the Hooghly, on which Calcutta stands. The Ganges is 1,560 m. long and drains an area of c. 390,000 sq.m. It is subject to floods which cover an immense area. To the Hindus the Ganges is a sacred river, and they come in thousands to bathe in her waters.

GANNET

Widespread family of web-footed sea-fowl (*Sulidae*). The N. Solan Goose, *Sula bassana*, 34 in. long, with a 6 ft. wing-spread, haunts the Atlantic coasts of Europe and N. Africa and feeds on fish. It is white-plumaged, with a yellow-tinged neck, and black wing feathers. Its breeding grounds include the Hebrides, Ailsa Craig, Lundy Is. and Bass Rock.

GARDEN CITY

Residential district incorporating parks, gardens and cultural centres within the town area. The first garden city in Eng. was planned at Letchworth, in 1903, on 6 sq. miles of land to house 35,000 people. Other garden cities followed, one being at Welwyn. The movement has greatly influenced 20th cent. town planning.

GARDENIA

Genus of evergreen trees and shrubs, named by Linnaeus after the botanist Alexander Garden, F.R.S. Native to S. Africa and trop. Asia, several species are cultivated, esp. the Chinese, *G. jasminoides*, popularly called Cape-jasmine, and the Japanese, *G. radicans*.

GARDINER, Stephen

(c. 1493-1555) Eng. prelate and statesman. In 1528 he was sent by Henry VIII to Italy to secure the consent of the Pope to the divorce of Catherine of Aragon. On the accession of Mary in 1553, was made Lord Chancellor.

GARFIELD, James Abram

(1831-81) 20th Pres. of the U.S.A. B. Orange, Ohio, he distinguished himself as a soldier during the Civil War. In 1880 he was chosen Pres. but in July, 1881, he was shot at Washington, and d. in September.

GARIBALDI, Giuseppe

[gar-i-bal'-di] (1807-82) Ital. patriot. B. Nice, he early came under the influence of Mazzini. In 1848 he fought for the King of Sardinia and defended Rome against the Fr. After the peace

of Villafranca, he led a small army of volunteers, his 'red shirts', into Sicily, which he captured from the Bourbon King of Naples. He then captured the Neapolitan territory on the mainland and handed both to Victor Emmanuel thus helping him to become the first King of united Italy. In 1862 and 1867, Garibaldi made unsuccessful attempts to take Rome.

GARLIC

Pungent perennial bulbous herb (*Allium sativum*) of the lily family, native to Asia. It has long been a favourite condiment in S. Europe and Asia, and was introduced into Eng. in Tudor times. The bulb has membranous scales whose axils bear 10 or 12 smaller bulbs called cloves. Medicinally, it is a stimulant and stomachic. *A. ursinum* is bear's garlic or ramsom; other Brit. species are crow, wild, and field garlic.

GARNET

Group of complex silicates of various oxides used as gemstones. They crystallise in 12- or 24-sided forms. Lime alumina garnets are red, yellow, or green, a gemstone of this class being the cinnamon stone of Ceylon. Iron alumina garnet, or almandine, is purplish red, the common red garnet is a magnesia-alumina variety.

GARRICK, David

(1717-79) Eng. actor; b. Hereford, educ. Lichfield. He there met Samuel Johnson, who took him as a pupil, and in 1737 the pair set out together for London. Garrick first appeared on the stage in London in 1741. He played at Drury Lane, in Dublin, and at Covent Garden, and in 1747 became joint manager of Drury Lane, where he remained until 1776.

GARTER The Most Noble Order of the Eng. order of knighthood, founded in 1348 by King Edward III. It is a religious and milit. fraternity. The fraternity comprised 26 knights and held its convocations in St. George's Chapel, Windsor, rebuilt by Edward IV. There are now 5 officers of the order: the Prelate, Registrar, Usher, Chancellor, and the Garter King of Arms. The Sovereign head of the order is H.M. Queen Elizabeth. Membership of the order is now limited to 25 knights and to members of the royal family and of foreign royal families. The knights wear below the left knee a garter of dark blue velvet bearing the motto in gold (*honi soit qui mal y pense*). They also wear a blue velvet mantle, surcoat, and hood with a collar of Tudor roses, from which the George, a figure of St. George, and a star are suspended.

GAS

State of matter in which the cohesion between the material particles is at its minimum, producing a condition of perfect fluidity. By cooling, a gas may be liquefied and solidified. Gases readily diffuse into one another, are soluble in many liquids, and their properties of viscosity in flow and compressibility are well marked characters. See COAL GAS; NATURAL GAS; POISON GASES. **Gas Engine.** Type of internal combustion engine. The power is obtained from the combustion of an explosive mixture of gas and air in a cylinder. The first engine of this type was invented in 1860 by Lenoir, who used coal gas as fuel. Improved upon by Otto introducing the 4-stroke cycle. A 2-stroke cycle is used for many large engines since it gives a greater output of power.

* **GAS TURBINE** See TURBINE; JET PROPULSION.

GASCONY

Former prov. of S.W. Fr. between the Garonne and the Pyrenees. In the M.A., Gascony became part of Aquitaine, and was included in the dowry of Eleanor, wife of Henry II of Eng. It remained an Eng. possession until c. 1453.

GASKELL, Elizabeth Cleghorn

(1810-65) Eng. novelist. B. London, the

daughter of a Unitarian minister. Mar. 1832, W. Gaskell, a Unitarian minister in Manchester. Pub. *Mary Barton* anonymously, 1848, giving a view of industrial conditions in the N. Wrote a series of papers pub. 1853 as *Cranford*. Mrs. Gaskell also wrote the controversial *Life of Charlotte Brontë* (1857).

GASTEROPODA

Mollusca that crawl on a broad, muscular, disc-like foot beneath the body. A univalve shell, never a bivalve, is generally developed in the larval form; it is sometimes reduced or absent in the adult. All gasteropods possess rasping 'tongues', or radulae, the mouth being situated in the foot. Over 16,000 species are known, and they are found on land, or in fresh or salt water.

GASTRITIS

[tri-j] Inflammation of the stomach which results from indiscretions in diet, over-consumption of alcohol, poisoning or infection. The chronic type is assoc. with longstanding incorrect feeding.

GATESHEAD

County borough and seaport of Durham, on the Tyne, opposite Newcastle. The industries include engineering works, railway shops and chem. manufactures. It returns 2 members to Parl. Pop. 103,000.

GATUN

Town of C. Amer. in the Panama Canal Zone, under U.S. jurisdiction.

GAUGUIN, Paul

[gə-gə(n)] (1848-1903) Fr. painter. B. Paris. Encouraged by Pissarro, he began painting, joining the Post-Impressionist group, and later started the Synthetist movement. After painting in Brittany and S. Fr. he worked in Tahiti from 1891-3. After visiting Paris, he returned to Tahiti in 1895, and removed to Dominika in 1901, where he d. See *The Gold of their Bodies* by Charles Gorham (1955).

GAUSS, Karl Friedrich

(1777-1855) German mathematician. He demonstrated that by elementary geometry a circle can be divided into 17 equal arcs, and made the notable discovery of the principle of least squares, which is still the basic method used for the reduction of observations in astronomy, etc. On Jan. 1, 1800, he observed the small hitherto unknown planet which he named Ceres. At the age of 30 he was apptd. Prof. of Astronomy at Göttingen, and establd. the world's first regular magnetic observatory there in 1833. This led to discoveries in the mathematical theory of electricity and, in 1851, to the realisation that magnetic changes were closely linked with magnetic storms, and that both of these were linked with the sun-spot cycle of c. 11 years. The unit of intensity of a magnetic field is named after him (the Gauss unit).

GAUTIER, Theophile

(1811-72) Fr. author. B. Tarbes, d. Paris. Educ. Paris. A 'Romantic'. Among his novels are *Mlle. de Maupin* (1835) and *Le Capitaine Fracasse* (1863). His poetry includes *Emaux et Camées*.

GAY, John

(1685-1732) Eng. poet and dramatist. B. Barnstaple. He wrote poems, pamphlets, plays; *Trivia* (1716), *Fables* (1727), *The Beggar's Opera* (1728), a ballad-opera, had an immense success. Gay also wrote ballads and the libretto of Handel's *Acts and Galatea* (1732).

GAZA

[ga'-zà] Town of N. Egypt, near the Israeli frontier. Gaza was the scene of 2 battles in World War I. The Gaza Strip was occupied by Egyptian forces, 1948, and is a source of frequent strife between Egypt and Israel. Pop. 37,800.

GAZELLE

[ell'] Small antelopes. Native to N. Africa

and Asia, they form large herds on the desert borders. They are graceful, swift and slender limbed, and are mostly under 30 in. high at the shoulder. The male of the Dorcas Gazelle has lyre-shaped, ringed horns, c. 13 in. long.

GDANSK
(formerly Danzig) City and port of Poland, on the W. arm of the Vistula, c. 4 m. from its mouth. As Danzig it was the cap. of E. Prussia, and in 1919 became a free city. Occupied by Germany from 1939-45, when it was taken by Poland and renamed Gdansk. Pop. 286,000.

GDYNIA
[gdin'-ya] Polish seaport on the Gulf of Danzig, 12 m. N.E. of Gdansk. During World War II the port was destroyed by the Germans, but since 1945 it has been rebuilt. Pop. 148,000.

GEDDES, Sir Patrick
(1854-1932) Scottish biologist, sociologist and town-planner. Prof. of Botany, Dundee, 1883-1920; Prof. of Sociology and Civics, Bombay. Geddes had a world-wide influence on town planning and on social, educ. and economic reform.

GEELONG
City and port of Victoria, Australia, 45 m. S.W. of Melbourne, on an inlet of Port Phillip Bay. Shipping is important, and there are woollen mills. Pop. 90,000.

GEIGER-MÜLLER COUNTER
Device used for detecting nuclear radiations and particles.

GEIKIE, Sir Archibald
[ge'-ki] (1835-1924) Scots geologist. B. and educ. in Edinburgh. An F.R.S. in 1865, he was knighted in 1891, and given the Order of Merit in 1914. His many works include *Scenery of Scotland*, 1865; *Outlines of Field Geology*, 1882; and *Text Book of Geology*.

GELATINE
Purified form of glue. The purest form, isinglass, is a fish glue. It is used for culinary purposes, in the preparation of photographic plates and films, in bacteriology and dyeing.

GELIGNITE
High explosive. A modification of gelatine dynamite containing about 65 % of nitro-glycerine, collodion cotton, nitrate of potash and wood meal. Standard explosive for blasting.

GEMSBOK
(*Oryx gazella*) Antelope, a native of S.W. Africa. It is about the size of a stag, with maned neck, tufted tail and a neutral coat marked black and white.

GENE
[jēn] A unit of hereditary material incorporated in the chromosomes of reproductive cells. The gene is a self-producing unit of living substance common to all groups of animals and plants including bacteria. Genetics. The science of inheritance and study of the factors involved in the variation of organisms.

GENERAL ASSEMBLY
Name given to the governing body of the Ch. of Scot. and other Presbyterian chs. in Ireland, Canada, Australia and elsewhere. The Scot. general assembly meets annually in Edinburgh in May, and consists of mins. and laymen sent as representatives by the presbyteries. The queen is represented by a High Commissioner appointed each year. The assembly is presided over by a min. elected to the office, called the Moderator.

GENESIS
First book of the O.T. Its Gk. name, meaning 'origin', is that of the Septuagint version. After an account of the creation of the world it surveys the early hist. of mankind (11), and in fuller detail that of the patriarchs Abraham, Isaac and Jacob (12-50).

GENEVA
[je-né-və] City of Switzerland, cap. of Geneva canton at the W. end of the Lake of Geneva. A financial and intellectual centre, its chief industries are the manufacture of watches and light machinery. There is a univ. and a tower. Other fine buildings include the tower of the bishop's palace and Palace of the Nations, the former headquarters of the League of Nations. The internat. Labour Office and the internat. Red Cross are still centred in the city. It became a republic and remained so until the Fr. Revolution. In 1815 it became part of Switzerland. Pop. 181,400. Geneva. Canton of S.W. Switzerland, bounded by Vaud and 3 Fr. depts. Cap. Geneva. Area: 110 sq.m. Pop. 259,234. The Geneva Convention (1906) provides for better treatment of the wounded in war and forbids any misuse of the Red Cross flag. Geneva, Lake of (*fr.* Lac Léman) lake between Switzerland and Fr. It is 45 m. long, and covers c. 225 sq.m.

GENOA
[jen'-ō-a] (*Ital.* Genova) City and seaport of Liguria, N. Italy, 75 m. S. of Milan. It is the chief port for the Lombardy Plain, importing raw materials for industrial cities such as Milan and Turin. Industries include shipbuilding and engineering. The city has a univ. founded in 1243, a 10th cent. cathedral and numerous historic buildings, many of which suffered from Allied bombing in World War II. Genoa became a flourishing seaport, c. A.D. 1000, and monopolised, with Venice, the sea trade between Asia and Europe. In 1815 it was given to Sardinia and then became part of Italy. Pop. 775,107.

GENTIAN
[jen'-shian] Genus of annual or perennial herbs (*Gentiana*). The funnel-shaped corollas, usually blue, are adapted for various kinds of insect visitors; the small vernal gentian for butterflies, the marsh gentian for bumble-bees, etc. The yellow *G. lutea* contains a bitter principle, used medicinally. Native of temp. and alpine regions; of the 300 species only 5 are Brit.

GEOFFREY OF MONMOUTH
(c. 1100-54) Eng. historian. Studied at Oxford; became Bishop of St. Asaph, 1152. First recorded Arthurian legends.

GEOGRAPHY
Science dealing with the surface configuration of the earth in relation to man. Commercial Geography deals with economic products of the earth. Oceanography, the study of the sea. Historical Geography is the study of changing space relationship, with a changing knowledge of the world, and of the development of nations, empires, industries and transport.

GEOLOGY
Science dealing with the constitution and hist. of the earth's crust. *Mineralogy*, the study of the mineral constituents, and *Petrology*, the study of rock structure, form important sections of the science. *Physical Geology* is concerned with the evolution of land forms. *Stratigraphical geology* deals with the historical sequence of the rocks and strata, and *Palaeontology* with the fossils. The foundation of modern geology dates from the publication of James Hutton's *Theory of the Earth* in 1788, in later years of William Smith, Sedgwick, Murchison, Geikie, Lyell and others. Geological history. Knowledge of the rate of decay of uranium to lead has enabled an approximate absolute time scale to be compiled for the sequence of events since the cooling of the earth's crust some 2,000 million years ago.

GEOMETRY
Science dealing with measurement and the properties of space. Plane or 2-dimensional geometry is concerned with the properties of plane figures, while solid geometry deals with

solid figures of 3 dimensions. The science flourished among the Gks., especially at Alexandria. Thales, 'the father of geometry', was followed by Pythagoras, Hippocrates, and later, Euclid.

GEORGE I

(1660-1727) King of Gt. Brit. and Ireland. His mother, a granddaughter of James I of Gt. Brit., was made heir to the throne in 1701, and George became king of Brit. on the d. of Queen Anne in 1714. He spoke no Eng. and left the admin. of the country to his ministers, a practice which initiated the system of Cabinet Govt.

GEORGE II

(1683-1760) King of Gt. Brit. and Ireland. Son of George I, he was created Prince of Wales in 1714. In 1727 he succeeded to the throne, and followed his father's policy of ruling through his ministers, esp. Sir Robert Walpole, the first P.M. In 1743 he led his army against the Fr. at Dettingen. During his reign occurred the Jacobite Rebellion of 1745, and war with Fr. His family consisted of 2 sons and 5 daughters, but as his eldest son Frederick, Prince of Wales, d. before him, he was succeeded by Frederick's son, as George III.

GEORGE III

(1738-1820) King of Gt. Brit. and Ireland. His father d. in 1751. In 1760, George succeeded his grandfather, George II. In 1762 he made Bute P.M., but in 1763 the earl resigned. In 1770, having formed in Parl. a party known as the King's Friends, he was able to put Lord North at the head of affairs. For 12 years George and North were responsible for the govt., a period marked by the loss of the Amer. colonies. In 1788, the king's mind gave way, and his son George was appointed regent. He became permanently insane in 1811, and for the rest of the reign his son was regent. George mar. in 1761, Charlotte, princess of Mecklenburg-Strelitz and had 15 children, 7 of the 9 sons survived.

GEORGE IV

(1762-1830) King of Gt. Brit. and Ireland, eldest son of George III, he was made Prince of Wales in 1762. In 1795 he mar. Caroline of Brunswick but soon quarrelled with his wife. As Prince of Wales, George was notorious for his extravagance and profligacy. He became the central figure of the Whig opposition to the govt., Fox and Sheridan being among his friends. He acted as regent during his father's insanity in 1788. In 1811 he was again regent, and retained the office until he became king in Jan. 1820. Mrs. Fitzherbert was his morganatic wife from 1785 until her d. 1813.

GEORGE V

(1865-1936) King of Gt. Brit., Ireland and the Brit. Dominions beyond the Seas, and Emperor of India. B. in London, he was the 2nd son of Edward VII, then Prince of Wales, and his wife Alexandra. In 1893 mar. Mary, the only daughter of the Duke of Teck. He was Duke of Cornwall when his father succeeded to the throne in 1901. Opened 1st Parl. of new Commons. He had between 1901 and 1910 made journeys through the Empire. On May 6, 1910, George became king, and on June 22, 1911, he was crowned in Westminster Abbey. The King and Queen had 6 children, of whom 2 survive. Five were sons, viz. Edward, Duke of Windsor, Albert, King George VI, d. 1952, Henry, Duke of Gloucester, George, Duke of Kent, d. 1942, and John, d. 1919. The only daughter, Mary, Countess of Harewood became Princess Royal in 1932 and d. 1965.

GEORGE VI

(1895-1952) King of Gt. Brit. Prince Albert Frederick Arthur George, 2nd son of King George V. In 1923 he mar. Lady Elizabeth Bowes-Lyon. They had 2 daughters, Elizabeth (b. 1926), who became Queen on her father's

death, and Margaret Rose (b. 1930). In 1936 Edward VIII abdicated a few months after his accession, and the Duke of York succeeded. His steadfastness won the devotion of his peoples everywhere. With the Queen he paid State visits to France (1938), Canada and U.S.A. (1939), and to S. Africa (1947). In Sept. 1951 he underwent a lung operation, and d. suddenly in Feb. 1952.

GEORGE

(1902-42) Brit. prince, 4th son of King George V. He served with the Navy and then in the Foreign Office. In 1934 he mar. Princess Marina of Greece and Denmark (b. 1906), and became Duke of Kent. During World War II he served with the R.A.F. and was killed in a flying accident. There are 3 children, Prince Edward, Duke of Kent (b. 1935), Princess Alexandra (b. 1936) and Prince Michael (b. 1942).

GEORGE

Made patron saint of Eng. 1349. He may have been a Christian soldier in Cappadocia, put to d. at Nicomedia, 303. The popular legend is that he killed a dragon and then became a preacher of Christianity. His festival is on Apr. 23.

GEORGE CROSS

Decoration intended to mark acts of the greatest courage by men and women in all walks of civil life. The Award was also conferred on the Is. of Malta in 1942. The *George Medal* is awarded for similar acts of a less exceptional nature. Both awards instituted 1940.

GEORGIA

Constituent repub. of the U.S.S.R. in the Caucasus between the Black Sea, the Caucasus Mts. and Armenia. Agriculture is the chief industry; tea, citrus fruits and tobacco are grown in the sub-trop. coastal area and grapes and silk are produced inland. The production of oil, manganese and other minerals is important. The cap. is Tbilisi. The Georgians form c. 3/4 of the pop. Its people were indep. until 1801 they placed themselves under the protection of Russia. In 1918 a repub. was set up in G. and in 1921 the Soviet form of govt. was adopted. In 1922 it united with Azerbaijan and Armenia to form the Trans-Caucasian Fed. of Socialist Soviet Repubs. In 1936 the G.S.S.R. was formed; it includes the Abkhazian and Adzharian, autonomous repubs. Area: 27,570 sq. m. Pop. 4,000,000.

GEORGIA

S. state of the U.S.A., 1 of the 13 orig. members of the union. It has a coastline on the Atlantic and is lowland, except for the Appalachian Mts. in the N.W. The state produces cotton, maize, tobacco and fruit, and there are forests; there are important fisheries and mines. Atlanta is the cap.; other towns are Savannah, Augusta, Macon and Columbus. Georgia was settled in 1733. It entered the union in 1788 and now sends 10 representatives to congress. Area: 59,876 sq. m. Pop. 4,097,500.

GERANIUM

Genus of herbs native to temp. regions, with regular flowers generally rosy, purplish-red or blue in colour, and divided leaves; 12 native Brit. species are popularly called crane's bill. Allied herbs, with irregular flowers, varying in colour from scarlet to white, form the distinct genus *Pelargonium*.

GOLD

One of the elementary precious metals. Chem. sym. Au from the Lat. *aurum*; at. wt. 197.2; spec. gr. 19.32. In 1962 S. Africa produced £318,291,000 of gold. Other producing countries are the U.S.A., Canada, Russia, Mexico, Australia, Rhodesia. Gold Standard. Introduced officially into Brit. in 1816 and during the course of the 19th cent. there was a significant co-relation between prices and the quantity of gold. The value of gold increases with falling prices and falls when prices rise. Between 1820-48 the price level fell by 25 % because the supply of gold was insufficient to counterbalance the expanding vol. of trade. Prices rose between 1848-73 as a result of the discovery of gold in Calif. and Australia. The drain on Brit.'s gold resources became so great that she had to suspend gold payments in 1931. The system now takes 3 forms (1) the gold specie standard depending on the use of gold coins as current exchange. (2) The gold exchange standard in which notes or token coins are used as medium of exchange, in relation to gold, gov't-controlled. (3) The gold bullion standard in which gold bullion is bought and sold without restriction at fixed prices. This system is in existence when a country is unable otherwise to discharge its balance of debt abroad. At present Brit. operates on a system combining (2) and (3).

Soon they were divided into 2 branches, in the E. the *Ostrogoths* and in the W. the *Visigoths*. They were converted to Christianity by the preaching of Ulfilas. c. 400, under Alaric, a warlike and

ambitious leader, they began to move. They marched W., reached Italy, and in 410 captured and plundered Rome. In a short time they estab'd. a Gothic kingdom in Fr. and Sp.; first king was Theodoric. In Fr. they were overthrown by the Franks under Clovis early in the 6th cent. In Spain they conquered the Vandals and occupied a dominant position until their last king, Roderic, was killed in battle with the Moors in 711. After the Visigoths had moved W. the Ostrogoths were temporarily conquered by the Huns. About 520 they marched into Italy, as the emissaries of the Empire at Byzantium. They estab'd. themselves there under their leader, Theodoric, who made Ravenna his capital. Soon after his d. in 526, Justinian sent Belisarius against the Ostrogoths. GOVERNMENT

System or method of governing; also the persons who form the governing body of a country. Govts. were classified by Aristotle according to whether they were directed by the one, the few or the many. We may call these monarchy or tyranny, aristocracy or oligarchy, and democracy. In addition, there were govts. such as the Jewish, in which the priests played a large part, called theocracies. Representative govt. arose in the M.A. from the fusion of primitive Teutonic and Ch. influences, but the representation was that of only a small class in the community. Govt. rested on the consent of the governed, though that consent was passive rather than active. The great age of democracy began with Rousseau and the ideas of the Fr. Revolution. In the 20th cent. women were given the vote in many countries. This made these govts. for the first time real democracies, as all adults had a part therein. But democracy has not fulfilled expectations. It may be that the modern state is too vast, that the individual, one only among millions, feels himself unimportant. After World War I, authoritarian govts. based on the identification of an individ-

ual or a polit. party with the state, arose in many countries in contradistinction to democracy. A govt., i.e. the body of men who occupy the offices of state in a democracy, is liable to lose power as a result of an adverse vote by the electorate. Authoritarian govts. are not subject to such constitutional limitations.

Athens is the cap. and largest town. There are many ports. Most of the pop. belong to the Gk. Orthodox Ch., the state religion; there are 2 univs. at Athens and Thessaloniki. Area: 50,534 sq.m. Pop. 8,389,000. History. Many cents. B.C. Mycenae in Crete was a powerful city. About 1000 B.C. the people of Greece were called Hellenes and from Greece their settlements spread to Asia Minor, Italy and Sicily, the is. of the Aegean Sea, and almost all round the European and Asiatic coasts of the Medit. This is the Greece pictured by Homer. By the 6th cent. B.C. Greece, or Hellas, consisted of a number of independent states, ruled by 'tyrants' or dictators. Trade was active, most of it done by sea. Among the city states Athens, Sparta, Corinth, Thebes were prominent. Among these people, art and lit. began to flourish as never before. This civilisation reached its zenith in Athens in the time of Pericles, the 5th cent. B.C. This was also the time when Greece was engaged in the unequal struggle with Persia. At Marathon, on land, and at Salamis, on sea, the Persians were

utterly defeated. Only with great difficulty and in the presence of great danger, had the city states united together. In 431 B.C. Athens and Sparta entered upon the Peloponnesian War, which ended in 404 with the defeat of Athens. Sparta for a short time, and then Thebes was the most powerful of the city states. Macedonia passed, in 339, under the rule of Philip. He became the most powerful man in Greece, and, when he d. was succeeded by Alexander the Great. He exercised a kind of sovereignty over Greece. The position of Macedonia in the 2nd cent. B.C. was challenged by Rome and in 146 B.C. Greece became part of the Rom. Empire which borrowed greatly from its civilisation. Later the E. Empire was Gk. and not Lat. in speech and customs. In 1204, on the collapse of the Byzantine Empire, Greece became part of the Lat. kingdom of Rumania. In the 15th cent. it was conquered by the Turks, who dominated it until the 19th cent. In 1821 the Gks. revolted against Turkish misrule. In 1833, Otto, a prince of Bavaria, became king, but was expelled in 1862. The throne was then offered to a Danish prince who, in 1863, became George I, King of the Hellenes. His son and successor, Constantine, was dethroned in 1917, Constantine's son, Alexander, then had a short reign which ended in his d. and in his father's return. In 1924 Greece became a repub. under Venizelos. The monarchy was restored in 1935 after a plebiscite, and George II returned. He supported the dictatorship of General Metaxas from 1936 until 1941. Italy attempted to invade Greece in 1940. The Germans occupied Greece from 1941 until 1944. Civil war between the royalists and left-wing parties following the liberation, resulted in a royalist victory. The King returned; he was succeeded on his d. in 1947 by his brother, Paul I (d. 1964). Succeeded by his son, Constantine. In 1947 Communist guerilla disturbances placed the country in a state approaching civil war, which continued until the summer of 1949. Military rule established (1968) and King Constantine went voluntarily into exile (1969).

GREEK

There are today 2 forms of the language. One is that spoken at Constantinople. It lost its official status in 1453, but continued to be spoken in a somewhat altered form to the present day. Classical Gk. in which the masterpieces of lit. are written was a dormant tongue for over 1,000 years. At the revival of learning its wonderful treasures were discovered by scholars and since then it has been one of the 2 classical languages of the univs. and schools of Europe. The alphabet consists of the following letters.—

Α	Β	Γ	Δ	Ε	Ζ	Η	Θ	Ι	Κ	Λ	Μ

HEAT

A form of energy, which may be obtained from, or converted into, the other forms, e.g. mechanical energy, electrical energy, chemical energy. Radiant Heat is an electromagnetic

vibration of wavelength longer than that of visible light. It travels through empty space without any loss, but on encountering water of any form it may be converted to molecular heat which is simply an agitation of the molecules of the body which possesses it. The distinction between heat and temp. is important. The temp. of a body is a property which indicates whether heat flows from the body to its surroundings or from the surroundings into the body. The effects which may be produced by the application of heat to a body are (1) increase of temp., (2) increase of volume (or expansion), (3) changes of state, e.g. from solid to liquid or liquid to vapour. The unit of heat on the Brit. System is the Brit. Thermal Unit, which is the quantity of heat required to raise the temp. of 1 lb. of water through 1° F. The metric unit is the calorie, which will raise the temp. of 1 gram of water through 1° C. The Specific Heat of a substance is the quantity of heat required to raise unit mass through a temp. of 1°. The Latent Heat of a substance is the quantity of heat absorbed or released when unit mass experiences a change of state. It is measured in calories per gram on the metric system, and B.Th.U. per lb. on the Brit. System.

Carnivorous mammals allied to the Civets. They are shaggy, with powerful jaws and short tails. The hind limbs are shorter than the fore limbs. The Striped, or Laughing Hyaena is found in Asia and Africa; the Brown and Spotted in Africa only. Hyaenas feed at night on carrion.

HYDE, Edward
Earl of Clarendon (1609-74) Eng. statesman and historian. He took Charles I's side in the Civil War, the subject of his *History of the Great Rebellion*.

HYDERABAD [hi-'dra-bad] One of the former States of India, watered by the Rivers Godavari and Kistna. The ruling dynasty of this Hindu state was Moslem. In 1947 the Nizam declared Hyderabad's indep. of both India and Pakistan, but following the occupation by Indian troops, 1949, the state became part of the Indian Repub.

HYDRA
Small freshwater organism or 'polyp'. Belonging to the class Hydrozoa, it is common in ponds and streams, where it attaches itself by a sticky secretion to weeds, etc. Hydra consists of a soft tubular body, $\frac{1}{2}$ to $\frac{1}{4}$ in. in length, with a circle of 6 to 8 hollow tentacles round the mouth.

HYDRANGEA
Genus of flowering shrubs of the saxifrage family. Several are grown in Brit. notably *H. paniculata* and *H. macrophylla*.

HYDROCEPHALUS
[-self-] Pathological condition in which fluid is retained within the skull. Popularly known as water on the brain.

HYDROCHLORIC ACID
Aqueous solution of the gaseous compound hydrogen chloride (HCl), it was formerly called muriatic acid. It is prepared by heating common salt with sulphuric acid, the gas being

collected in water. The crude impure acid, often termed spirits of salt, is used for cleaning metal work.

HYDROCYANIC ACID
HCN. Highly poisonous acid, also known as prussic acid, found in bitter almonds and laurel leaves. With bases it forms a series of salts known as cyanides. It is very volatile and has a characteristic smell of bitter almonds. Its poisonous action is rapidly fatal.

HYDRO-ELECTRIC POWER
Electrical energy obtained from generators driven by water-turbines. The initial source of power may be natural, as in waterfalls, or artificial, as in river-damming. The first large hydro-electric installation was completed at Niagara in 1892, and since then plants have been set up in many other parts of the world where water power is available.

HYDROFOIL
Boat fitted with hydrofoils. When the boat is at rest or moving slowly, the hydrofoils extend down into the water, but when it gathers speed, the water impinging on the hydrofoils exerts greater pressure on the bottom than on top. As the hydrofoils rise, so does the hull, which rides along as if on stilts. Boats of this type virtually eliminate friction of the water on the hull. The first hydrofoil patents are dated 1905, and the Wright Brothers experimented with a boat of this type in 1907. In recent times, every navy of importance has renewed its experiments with boats of this kind.

HYDROGEN
Colourless gaseous element, a constituent of water and of nearly all organic materials. It is the lightest element, having a density 0.07 times that of air. It was first recognised as a distinct substance by Cavendish in 1766. **Hydrogen Bomb.** Nuclear weapon that derives its energy largely from nuclear fusion, i.e. the joining together of light elements. Very high temperatures are required, provided initially by the fission of heavy elements such as uranium and plutonium. The first was exploded by U.S. forces, 1952.

HYDROGEN PEROXIDE
Colourless, odourless, water-like liquid which gives off oxygen on coming in contact with organic tissues. Hence it is a valuable antiseptic and bleaching agent.

HYDROMETER
Instrument for determining the relative densities of liquids.

HYDROPLANE
Type of boat constructed to skim over the surface of water when driven at a high speed.

HYKSOS
or Shepherd Kings. Name given to the leaders of a group of Semitic tribes who seized power in Egypt after the downfall of the 13th dynasty, c. 1700 B.C. and were expelled when the Theban kings regained the ascendancy, c. 1550 B.C.

HYMENOPTERA
[hi-'l] Large order of insects. Possessing 2 pairs of membranous wings, and mouth parts adapted for biting and sucking, they are represented by the ants, bees, wasps, and gall flies. In the female the abdomen is provided with an ovipositor modified for sawing, piercing or stinging.

HYMN
Song of praise and thanksgiving to God. Hymns were introduced into Christian worship at an early date and developed from the Psalms. The earliest were in Lat.

HYOSCINE
or Hyoscyne Hydrobromide or Scopolamine. Drug used to dilate pupil of the eye and as a

sedative. Combined with morphia it is used occasionally to produce the 'twilight sleep' for childbirth.

HYPERTENSION

Sign of arterial and heart disease occurring in adults of all ages but principally in later life. The sign is assoc. with generalised arteriosclerosis.

HYPNOSIS

[hip-nô'sis] Special form of sleep induced under the influence of an operator. The hypnotic state presents 3 phases which merge into each other. The first is that of catalepsy or trance in which the limbs though rigid may be moulded at the will of the operator; the second is that of lethargy in which the whole body appears placid and the subject unconscious; the third is that of artificial somnambulism in which the subject is extremely susceptible to suggestion. In this last phase the subject may be made to perform actions which were impossible to him in his waking state, also he may be enabled to remember incidents which previously were beyond recall. Suggestions given in the hypnotic state are carried out subsequently when awake but without cognisance of the reason of their performance or of the existence of the hypnotic command. The condition is induced in a variety of ways. The subject must co-operate with the operator. Once hypnosis is established it is an easy matter to

hypnotise on subsequent occasions. See MESMERISM.

HYPNOTIC

[hip-not'ic] Term applied to drugs which promote sleep. Other terms used are soporific and narcotic. There are a large number of hypnotic drugs, the most commonly used being the barbiturates, chloral hydrate and paraldehyde. Bromides are sedative and so indirectly lead to sleep. Morphia and opium (laudanum) tend to lead to drowsiness, but they are primarily pain-relieving drugs. Great care should always be exercised in their use. There is always the danger of habit formation.

HYRAX

[hi'-] Tailless quadrupeds of the genus *Procavia* allied to the hoofed mammals. They are about the size of a rabbit and have short fur. The toes have nails except 1 digit in the forefoot which has a curved claw and the upper lip is cleft. They are found in Africa and Asia.

HYSSOP

Small perennial aromatic plant (*Hyssopus officinalis*) with bluish flowers and lance-like leaves, native to the Mediterranean. The hyssop of the Bible was probably a species of thyme.

HYSTERIA

Symptoms of a group of conditions called psycho-neurosis or functional nervous diseases which show no evidence of pathological changes in the organs concerned.

I

9th letter and 3rd vowel of the Eng. alphabet. It represents several vowel sounds and also the consonantal sound of *y*. The 3 principal sounds are: the long *i* as in *machine*, *intrigue*; the short sound in *pit*, *sin*, *fit*; the diphthongal sound, as in *mine*, *fine*, *wine*, etc. It also has several other sounds when in combination with certain vowels, as in *brief*, *grief*, or in the endings — *-tion*, *-sion*, etc.

IBEX

[i'beks] Wild alpine goat. It has long, curved horns and its average measurement is 4½ ft. Naturalists recognise allied forms called Himalayan, Arabian and Abyssinian.

IBIS

[i'bis] Slender-billed wading birds related to the storks. They have bald, black heads and necks and are found nearly all over Africa. Allied species live in Japan and Australia. *Ibis religiosa* was sacred to the Egyptians.

IBN SAUD

[sowd] Abdul Aziz Ibn Rahman Al Faisal, G.C.B., G.C.I.E. (1880-1953) King of Saudi Arabia. Originally rulers of Nejd, Ibn Saud's family was deposed and took shelter at Kuwait; he won his capital Riyadh, with 40 followers (1901); was king of Hejaz and Nejd (1927); changed name of kingdom to Saudi Arabia in 1932. Ibn Saud took a leading part in founding the Arab League, 1945. He was succeeded by his eldest son, Emir Saud (1953), who abdicated in favour of his brother Faisal, 1964.

IBSEN, Henrik

(1828-1906) Norwegian author. He lived abroad, mainly in Germany, till 1891. His chief plays include *Brand*, *Peer Gynt*, *A Doll's House*, *Ghosts*, *The Wild Duck*, *Hedda Gabler*, *The Master Builder*, *John Gabriel Borkman*.

ICE

Solid state of water. It is a colourless substance crystallising in the hexagonal system, of which hoar-frost, snow and hail are forms. The temp. 0° C. (32° F.) is defined as the temp. of melting ice. Water expands when freezing, and ice floats on cold water. Sp. gr. 0.92. The latent heat of fusion of ice is 80 calories per gram. Ice Age. Period of intense cold occurring after the deposition of the tertiary beds. Glaciation spread over N.W. Europe to parts of S. Europe and over the N. area of N. Amer. The deposits of this period are boulder clays and tills. There are indications that man was contemporary with the later part of the ice age.

ICE HOCKEY

Game played on ice between 2 teams of 6 players, first played in Canada in 1867. The playing area is 185 by 85 ft. All players wear protective clothing. Although popular in Brit., the game is played most in Canada, U.S.A., and Scandinavia.

ICEBERG

Mass of ice floating in the sea which has broken off a glacier or ice barrier. The latter are characteristic of the Antarctic. Icebergs from Greenland are carried S. by the Labrador current, and may endanger shipping in the N. Atlantic.

ICELAND

Repub. of Europe, Is. in the Atlantic Ocean, c. 200 m. S.E. of Greenland, just S. of the Arctic circle. The highest mt. is over 6,000 ft high, and there are some active volcanoes, notably Hekla. Iceland is also famous for its hot springs, or geysers. The S. has a cool maritime climate. The pop. is mainly concentrated in the S.W. Hay is the chief crop, and sheep and cattle are reared. Fishing is the principal occupation. Reykjavik is the cap. and chief port. The people are Lutherans. From 930 to 1264 Iceland was an indep. repub., with an assembly, the *Althing*, the oldest parl. in the world. In 1263 the rule of the King of Norway was recognised. Both countries passed to Denmark in 1381. I. obtained indep. in 1918, being united with Denmark only through the common sovereign. Occupied by Allied Forces during World War II (1940-5) I. was declared an indep. repub. in 1944. Area: 40,500 sq m. Pop. 183,000.

ICELAND MOSS

Lichen (*Cetraria islandica*), growing abundantly in Arctic and Antarctic climates and in the higher mt. regions of Brit. It grows c. 3 in high. It forms a starch used for sizing.

ICELANDIC See NORSE.

ICHNEUMON

[i'new] (1) (*Herpestes*) Small carnivorous mammal common in the valley of the Nile. It preys on snakes and crocodiles' eggs. (2) Ichneumon Fly, a small hymenopterous insect, is parasitic in its larval stage upon caterpillars.

IDAH0

State of U.S.A. in the N.W. Mainly mountainous, much of Idaho is arid, and irrigation is widely practised. The Snake is the chief river. Agriculture is the chief industry. Dairying is carried on in the valleys. Minerals include gold, silver, zinc and copper. Boise is the cap. Idaho was organised as a Territory, 1863, and became a state, 1890. 2 representatives are sent to Congress. Area, 83,560 sq m. Pop. 698,000.

IDEALISM

In metaphysics a doctrine that the only real existence is the idea, the intellectual perception, and that the material substance is dependent upon the idea. The theory was elaborated by Descartes with his dictum, *I think, therefore I exist*. Adopting this central principle, a school of philosophers arose, among whom Berkeley and Hegel were prominent.

IDOLATRY

Worship of images or other objects as representing super-human personalities. More advanced than animism and nature worship. Modern Judaism, Christianity and Islam regard as idols all objects of worship, public, family or personal, in polytheistic systems.

IGUANA

[i-gwa'-n5] Family of lizards, mainly Amer., but found in Madagascar and Fiji. The trop. Amer. *I. tuberculata*, with spiny crest along the back and large dewlap, is an herbivorous tree dweller. C. 6 ft. long, its flesh and eggs are edible.

IJSSELMER

Lake in the Netherlands, between the provs. of

N. Holland and Friesland, and separated from the N. Sea by a 20-m. dam, completed 1932. The lake was formed in the 13th and 14th cents. Since the 17th cent. much land has been reclaimed from the Zuider Zee.

ILE DE FRANCE

[é] Old prov. of Fr. with Paris as its cap. Also name of Mauritius 1715 to 1815.

ILEX

Large genus of shrubs and trees of the holly family, widely distributed in both hemispheres, esp. in S. Amer. The most important economically is *I. paraguayensis* which yields maté, or Paraguay tea. The common holly is *I. aquifolium*; others in cultivation are the inkberry and winterberry of N. Amer.

ILFORD

Part of Redbridge, borough of Greater London (1964). Photographic materials are manufactured. It returns 2 members to Parl.

ILKLEY

Urban district and resort of the W. Riding, Yorks., on the Wharfe, 16 m. N.W. of Leeds. Beauty spots nearby include Ilkley Moor, Wharfedale and Bolton Abbey. Pop. 18,360.

ILLINOIS

[noy] State of the U.S.A., S.W. of L. Michigan, bounded on the W. and S. by the Mississippi and Ohio rivers. It is mainly agricultural. Slaughtering and meatpacking are the chief industries. Coal is the most important mineral. Springfield is the cap. but Chicago is the largest city. It was discovered by Fr. explorers in the 17th cent. and ceded to Brit. in 1763. In 1783 it became Amer. and was admitted as a state, 1818. It sends 26 representatives to Congress. Area: 56,400 sq. m. Pop. 10,081,158.

ILLYRIA

Prov. of the Rom. Empire in S.E. Europe, covering the district now known as Bosnia, Herzegovina, Dalmatia and Montenegro. There was a prov. of Illyria in Austria, 1815-48.

ILMENITE

Iron titanate forming the principal ore of the metal titanium. It contains iron and titanium oxide and occurs in Norway and Canada.

IMAGE

In optics, the optical counterpart or picture of an object produced by reflection from a mirror or by refraction by a lens. An image may be either real or virtual. In the former case rays of light actually pass through the image, while in a virtual image they only appear to do so. To the eye, there is no difference, but a real image may be thrown on to a screen, while a virtual image cannot.

IMMIGRATION

Entrance of people into a foreign country for the purpose of settling there. Considerable immigration into the N. Amer. cont. in the 19th cent. led to steps being taken to restrict it. At first these were directed against the coloured races whose standard of living was lower than that of the white man. Today almost every country takes measures to keep out all who are considered undesirable, either on grounds of poverty or disease. Immigration into U.S.A. occurs on a large scale, the figures rising to 8,500,000 in 1900-10. Since 1920, the Austral. Govt. has given financial aid to Brit. subjects seeking settlement in Australia, a facility which has been revived since World War II.

IMMORTALITY

Condition or quality of being exempt from death or annihilation. Confidence in the continuance of human existence beyond the grave is traceable to primeval man. The pantheistic view of reabsorption in the universal life, or that of the Buddhist Nirvana, and the positivist view of corporate rather than individual survival, do not satisfy those who regard immortality as

essentially involving perpetuation of the personal consciousness. The Christian doctrine looks for fellowship with the Eternal through the resurrection of Jesus Christ.

IMMUNITY

The power of the animal body to resist infection. Acquired immunity results after the natural recovery from an illness and may be a permanent feature as after smallpox, or temporary as after pneumonia. Active artificial immunity is obtained by inoculation of a germ altered in its disease-producing properties so that it produces a modified attack of the disease by which in many cases the patient is not upset at all. Passive immunisation is produced by injecting blood or serum from an actively immunised animal or from a person who has recovered from the disease.

IMPERIALISM

Term used for the movement aiming at the strengthening of the Brit. Empire. It was much used towards the close of the 19th cent., its opposite being Little Englander. Lord Beaconsfield was regarded as a great imperialist.

IMPORTS

Goods coming into a country by way of trade, opposed to exports, which are goods sent out to foreign countries. In Brit. and most other countries the value of imports is calculated by officials at the ports of entry. Most countries levy duties on imported goods. Brit. joining the number in 1932 after almost a cent. of Free Trade. In Brit. the value of imports is always considerably greater than that of exports. The difference—the balance of trade—has been generally paid by invisible exports, such as shipping dues and insurance charges, but since World War II the aim has been to reduce imports and to balance them by increased exports. In Brit. the value of imports for 1963 was £4,820,165,241. See BALANCE OF TRADE; EXPORTS.

IMPRESSIONISM

School of painting originating in Fr. about 1870, assoc. with Edouard Manet and Claude Monet. Other painters of this school were Boudin, Degas, Renoir, Pissarro, Morisot and Sisley. The Impressionists claimed freedom from conventional academic methods of lighting and composition for later developments, see SEURAT, CÉZANNE, GAUGUIN.

INCA

People of a very ancient Peruvian civilisation possibly reaching back to 12,000 B.C. who possessed an empire which covered the modern Peru and part of Bolivia and Chile, an area 2,000 m. long and c. 500 wide. It was overthrown by Pizarro in 1533. The Incas achieved a high level of culture, as is evidenced by their social system, agriculture, road-making, ceramics, textiles, and buildings.

INCARNATION

Act of embodying in flesh, but specifically the assumption by the Godhead of human form and nature in the person of Jesus Christ.

INCENSE

Blend of sweet smelling spices burned in a thurible, etc. In the R.C. Ch. its use is general, but in the C. of E. it is used by a few high churchmen only.

INCEST

Intercourse between persons so closely related that they are debarred from contracting legal marriage. An Act of 1908 made it a misdemeanour for a male to have intercourse, or attempt to procure it, with his mother, sister, daughter, or granddaughter. A female over 16 who, knowing the relationship, permits such intercourse, is guilty.

INCOME TAX

A tax on income introduced by Pitt in 1799, removed in 1816 and reimposed in 1842 on all

202 • INCUBATION

Income arising in Brit. and N. Ireland. Numerous later acts were consolidated by the passing of the Income Tax Act, 1918, and later revised in 1945. Later acts were consolidated in the Income Tax Act of 1952. Tax is levied under 4 schedules according to the nature of the income. Sch. 'B' covers occupiers of land. Sch. 'C' covers income from abroad. Sch. 'D' which is divided into 6 classes charges the profits of all trades and professions and other income not taxed directly at the source. Sch. 'E' is in respect of income from employment which is collected under P.A.Y.E. The standard rate of income tax is decided by Parl. when the Chancellor of the Exchequer presents his budget.

INCUBATION

(1) In zoology the process by which birds stimulate the development of their eggs by the heat of the body of the parents, who sit on the eggs until their young are hatched. (2) In pathology, incubation is the period between the infection and the appearance of the symptoms of a disease.

INDEPENDENCE

The Declaration of I. is the document by which the U.S.A. declared themselves independent of Brit. It was drawn up by Congress and accepted by the representatives of the 13 orig. states on July 4, 1776. The 13 states were Massachusetts, New York, New Jersey, Virginia, Pennsylvania, Maryland, N. Carolina, S. Carolina, New Hampshire, Rhode Island, Delaware, Connecticut and Georgia.

INDEPENDENT LABOUR PARTY

Brit. polit. organisation, founded at Bradford in 1893. It helped to found the Labour Party. The I.L.P. gradually lost its influence. In 1932, under the leadership of James Maxton, the I.L.P. severed all connection with the Lab. Party, and entered into an alliance with the Communist Party. However, many branches and individual members left the I.L.P. and formed the Soc. League, which secured affiliation to the Lab. Party.

INDEPENDENT TELEVISION AUTHORITY

Public Corporation established by the Television Act 1954 to provide television services additional to those of BBC for a period of 10 years, renewed for further 12 years, 1964. The Authority operates transmitting stations but studios are the responsibility of the programme companies appointed by the ITA. These companies are completely responsible for the programmes, and legal obligations concerning standards of programmes and advertising are laid down in their contracts, while the ITA is responsible to Parliament. The system is financed by the sale to programme companies of restricted amounts of advertising time. Sponsored programmes supplied by advertisers are prohibited. Provisions of the Television Act governing programmes include: (1) nothing must be broadcast which is offensive to good taste or decency. (2) news must be accurate and impartial. (3) due impartiality must be preserved in matters of political or industrial controversy, or relating to current public policy. The ITA receives no public money, its revenue and capital needs being supplied from rentals paid by programme companies. The first ITA transmitter went on the air at Croydon in 1955. By 1966 30 transmitters were in operation serving 98% of the population. The country is divided into 13 areas served by 14 independent companies. After July 1968 14 areas will be served by 15 companies.

INDEX LIBRORUM PROHIBITORUM

Official list of books the reading of which was forbidden to the faithful of the R.C. Ch. Drawn up by a Committee of the Council of Trent, it

received papal approval and was first pub. in 1564. The office of the Congregation of the Index was finally abolished in 1965.

INDIA

The partition of the Indian subcontinent in 1947 gave the new Dominion of India 77 % of the area and 81 % of the pop. In 1950 the new state proclaimed itself a Repub. In 1956 the

26 states then existing were replaced by 14 states and 6 centrally administered territories or union states. Each state of the union has a Gov. appointed by the Pres. who is himself elected by a college consisting of members of the state legislative assemblies and members of the union's House of States and House of the People. Nagaland became the 16th State of the Indian Union in 1962. Physical Geography. The peninsula of India is a block of old igneous, metamorphic and sedimentary rocks. The W. half is covered with lava sheets (Deccan Traps) whereon lies a black soil highly suited to cotton. There is also an E. line of Ghats through which flow the rivers Mahanadi, Godavari, Krishna and Cauvery forming large deltas on entering the Bay of Bengal. In the extreme N are the Himalayas, comprising 3 main ranges, the Siwaliks, the Lesser Himalayas and the Greater Himalayas. Between these ranges and the peninsular block is a sediment-filled trough drained by the Indus and the Ganges and their tributaries. The hottest and driest period of the year is Feb.-May. During June heavy monsoon rains sweep over India and continue until Oct. During this season the Ghats and the land to seaward receive well over 40 ins. while the W. interior gets only 20 ins. or less. The coast of Madras receives rain also from Oct. to Dec. from the retreating monsoon. Ethnic and Social History. India has received many waves of immigrants. The Himalayas held back the Mongolian peoples but entry was made by the N.W. passes and the Arabian Sea. An early immigrant group was Dravidian-speaking and their tongue still persists S. of the Godavari. There followed after 1500 B.C. speakers of an Indo-European tongue whose influx is recorded in the Rig-Veda. Their descendants (Hindus) occupy India. Other invasions were those of the Gks., Persians and Scythians after 500 B.C., of the Huns in the 5th cent. A.D. and of the Arabs from the 8th to the 16th cents., leading to the dissemination of Islamic culture. European traders and missionaries established themselves on the W. coast from the end of the 15th cent. The Brit. E. India Co. and the Brit. Army ousted Fr. rivals. In 1858 the E. India Co. was wound up and direct govt. by Brit. replaced dual control. From that time, by a series of Acts, mainly those of 1861, 1909, 1919 and 1935, greater responsibility was given to the Indians. This process culminated in indep. and partition in 1947. Social practice, peace, famine control and health measures have allowed a great increase in pop. which has rapidly outrun the country's own food supply. India is predominantly an agricultural country. Where water is sufficient, rice is the chief crop, elsewhere, millet forms the staple food. India exports much cotton, tea, spices, linseed and sugar. Mod. industry began its growth at the end of the 19th cent., largely at the ports of Bombay, Calcutta and Madras. In 1947 six industries—cotton spinning and weaving, jute manufacturing, ordnance factories, general engineering, railway workshops and cotton gin-

ning—each employed over 100,000 workers. Four industries—sugar milling, iron and steel manufacture, tea factories and rice mills—each employed between 50,000 and 100,000. The Damodar Valley is becoming a region of heavy industry. Since 1953 a programme of rural development is in hand.

INDIAN INK

Ink of an intense black colour used by artists and draughtsmen, sometimes called Chinese ink.

INDIAN MILLET

Cereal grass yielding, after rice, the most extensively grown grain in the Old World. It is derived from *Sorghum vulgare*, and varieties produce *kurra* in Egypt and the Sudan, and Guinea and Kaffir corn in Africa.

INDIAN MUTINY

(1857-59) Revolt against Brit. rule in India, attributed partly to an order stating that in future Bengali soldiers were liable to service overseas, and partly to the annexation of Oudh in 1856. The mutiny proper began at Meerut on May 10. There, some native regts murdered their officers with their families, marched to Delhi, and restored the old Mogul Empire. Other centres of revolt were Cawnpore and Lucknow, and at both places Brit. garrisons were besieged. On June 27, Cawnpore surrendered, and, in spite of a safe conduct, all men, women and children were murdered by order of Nana Sahib. Sir Henry Havelock fought several battles on his way to Cawnpore. From there he marched towards Lucknow which he reached on Sept. 25. The mutiny at Delhi had meanwhile been crushed. Sir Colin Campbell with reinforcements from Brit. reached Cawnpore, and then with 8,000 men relieved the garrison at Lucknow. The capture of Jhansi and Gwalior in the summer of 1858 marked the end of the major operations.

INDIAN OCEAN

One of the 5 great oceans. It stretches from Africa to the E. Indies and Australia and from Asia to the Antarctic. Area 28,360,000 sq. m.

INDIANA

State of the U.S.A. lying S.E. of L. Michigan, bounded in the S. by the Ohio R. v. The land is mainly devoted to agriculture. Coal, petroleum, and iron are mined. Indianapolis is the cap. Indiana was settled in 1732, and became a state in 1816. 11 representatives a seat to Congress. Area 36,290 sq. m. Pop. 4,715,000.

INDIANAPOLIS

Cap. of Indiana, U.S.A., 110 m N.W. of Cincinnati. Industries include the manufacture of agricultural implements and the preparation of canned foods. Pop. 476,248.

INDIARUBBER

Name of *Latex elastica*, a tall evergreen tree growing in the damp forests of N. India, Assam and Burma. A favourite pot plant in Brit. See RUBBER.

INDIGO

Important blue dye-stuff, prepared from several leguminous plants of the genus *Indigofera*, chiefly *I. tinctoria* and *I. suffruticosa*, cultivated in India, Java and Natal. Natural indigo is largely superseded by the synthetic product, a derivative of naphthalene.

INDO-EUROPEAN

Family of inflectional languages, originating prob. in C. or N. Europe or S.W. Asia before 2000 B.C., and including the languages of N. India, Persia, and Europe (except Hungarian, Finnish, Lapp, Estonian—all Ural-Altaic—Basque, and ancient Etruscan, Pictish, etc.). Branches: Indo-Aryan, Iranian, Armenian, Albanian, Baltic, Slavic, Gk., Italic, Celtic, Germanic.

INDONESIA

Ethnological term for groups of Is. in the

Indian and Pacific oceans. Included are the Java group, part of the Malay Peninsula, Borneo, Celebes, the Philippines and the Pacific groups. The Repub. of I. State of the E. Indies comprising the Is. of Java, Madura, Sumatra, Banka, Belitung, part of Borneo, Celebes, the Moluccas, the Riouw-Lingga group, Bali and Lombok, and W. Timor. Much of the region was under Dutch rule from the 17th cent. Following World War II, a nationalistic movement arose, and intermittent fighting occurred between the Dutch forces and the Indonesians, until sovereignty was transferred by the Netherlands, Dec. 1949. General elections were held in 1955. The Repub. of I. is divided into 10 provs.: W. C. and E. Java; N. C. and S. Sumatra; Borneo, Celebes, Lesser Sunda Is. and the Moluccas. Diakarta (Batavia) on the N.W. coast of Java, is the federal cap. Govt. is by a pres. (Dr. Sukarno became the first pres. 1949) and council of mins. with a senate and house of representatives. Area: 736,532 sq. m. Pop. c. 97,085,000.

INDUS

River of Pakistan, which rises in the Himalayas in Tibet, at 18,000 ft. Flowing N.W. through the Kashmir gorges, it turns S.W. near Bunni, receives the Kabul near Attock and collects the Punjab streams at Mithankot, below which it traverses the plain of Sind to its delta on the Arabian Sea. The fall to Attock, 900 ft. above sea level, below which it is navigable, causes flooding, but this has been reduced by a dam and vast irrigation works. The length of the river is c. 1,900 m. and its drainage area is 372,000 sq. m. Indus Valley Civilisation. Beginning in 1922, 3 principal sites, Mohenjodaro, Harappa, and Chanhu-Daro were explored along the Indus river. Ruined cities were discovered which gave abundant evidence of a highly advanced civilisation which reached its climax about 2500 B.C. In the city of Mohenjodaro the domestic and civic architecture bears evidence of an elaborate system of drainage. Correspondence in pottery design and decoration, and the presence of actual beads from ancient Egypt, confirms that there was trade between Egypt and the Far East.

INDUSTRIAL DISEASE

A disease wholly or partly attributable to conditions pertaining at work, such as dermatitis in chem. industry, *rustagmus* in miners, silicosis in stone workers, lead poisoning in painters and pain in joints and anthrax in wool sorters. A workman contracting any disease signified as an industrial or occupational disease can claim compensation under the Nat. Ins. (Industrial Injuries) Act, 1936.

INDUSTRIAL REVOLUTION

Term used for the social and economic changes marking the transition from self-supporting agricultural village life and domestic industry to the capitalist factory system and modern industrialism. It generally refers to the period 1750-1850 in Brit.

INFANT

Person under 21 years of age. In Eng. law an infant cannot bring an action at law, but must sue, if and when it is necessary, through a next friend. An infant cannot generally enter into a contract. In Scot. an infant is called a pupil while under 14 if male and 12 if female. From these ages until 21 the child is a minor. Infanticide. Infancy Mortality. Term used for the death rate per 1,000 live births of children under 1 year old. This rate varies in each country and the rate in Brit. compares unfavourably with the Scandinavian countries.

INFANTILE PARALYSIS See POLIOMYELITIS.

INFECTION

Conveyance of disease into the body by matter infected with micro-organisms. Infection may

204 • INFERIORITY COMPLEX

be spread by droplets, i.e. small particles of moisture containing germs which are coughed or sneezed around; by drinking germ-contaminated water, or eating contaminated food; by bites of insects such as the mosquito; by "carriers", i.e. people who may have suffered from a disease but still retain the causal germs in their body; and lastly by direct touch or contagion as in the case of the venereal diseases. Infectious Disease. Disease capable of being spread by an infected person to another person in various ways. See INFECTION. In Brit. certain diseases so classified are notifiable by law to the local Med. Officer of Health, so that certain measures may be taken to prevent their spread. Smallpox, scarlet fever and tuberculosis are amongst those so classified. The local authority has power to include any disease in this list for its own local area.

INFERIORITY COMPLEX

State of lack of confidence in one's ability to compete with others frequently demonstrated by diffidence, or dissatisfaction with one's achievements. May be compensated by a bold, over-confident, self-satisfied or even pompous demeanour.

INFLAMMATION

Reaction of an area of the body which is the seat of bacterial invasion. The affected part is congested with blood cells, and large quantities of lymph are poured out by the affected tissues in an attempt to wash the invading organisms away. See SEPTICAEMIA.

INFLUENZA

Acute infectious disease attacking nose, throat and lungs. The virus was isolated in 1933. Chief symptoms are headache, generalised body aches and pains, fever, catarrh of larynx and trachea with cough and spit, fever, and in severe cases prostration, cyanosis and bronchopneumonia.

INFRA-RED RAYS

Electro-magnetic waves or heat rays. They are below the red rays of the visible spectrum and are invisible to the human eye. Infra-red rays emit heat. They are used to elucidate molecular structures; and to photograph through fog and mist or at distances invisible to the human eye. The rays are also used in medical treatments. See PHYSIOTHERAPY.

INGE, William

(1860-1954) Eng. divine. B. Yorkshire; educ. Eton and King's Coll. Camb. In 1911 he was made Dean of St. Paul's. During his years at St. Paul's, he became a very popular writer on the problems of the modern world.

INGELOW, Jean

(1820-97) Eng. poet. B. Boston, Lincs. A volume of her verse attracted attention in 1863.

INGRES, Jean Auguste Dominique

[a(n)-gr] (1780-1867) Fr. painter. He was awarded the Grand Prix in 1801. He painted portraits and classical subjects.

INJECTION

Method employed in medicine for administering certain drugs. Types of injection in use are

subcutaneous or under the skin, *intramuscular* or into the muscle, *intravenous* or into the vein.

INK

Ordinary writing inks were formerly made from ferrous sulphate and an infusion of gall-nuts with gum, but are now mainly made from aniline dyes. Copying ink contains glycerine to prevent drying. Printing inks are made from lampblack or other pigments mixed with drying oils. Ballpoint pen inks are essentially printing inks. Marking inks are preparations of silver nitrate or aniline dyestuffs.

INKERMAN

A ridge in the Crimea (U.S.S.R.) overlooking Sebastopol Harbour, where, in the final battle of the Crimean War, Nov. 1854, the Russians were defeated by the Brit. and Fr.

INNOCENT

Name of 13 popes. Innocent III (1160-1216) Lothaire Contl, the nephew of Pope Clement III, b. at Anagni; educ. in Paris and Bologna. In 1198 he was chosen pope. In Germany his influence helped Otto IV and then Frederick II to secure the imperial throne; he forced John of Eng. to a humiliating surrender. Innocent called the council of the Lateran, which in 1215 proclaimed a crusade, and he was responsible for the crusade against the Albigenses.

INNS OF COURT

In Eng. 4 socs. that alone have the right of admitting men and women to practise as barristers. They are Lincoln's Inn, Gray's Inn, Inner Temple and Middle Temple. In Dublin there is an Inn of court and one has existed since 1922 for N. Ireland at Belfast. An Scot. a similar work is performed by the Faculty of Advocates.

INNSBRUCK

[-bröck] Austrian town, cap. of the Tirol, on the Inn c. 60 m. S. of Munich. A tourist centre, I. controls the railway over the Brenner Pass. Pop. 100,695.

INOCULATION

Term used in medicine when certain materials producing an immunity to disease are given by injection. Many diseases can be prevented by inoculation such as smallpox, typhus fever, diphtheria, whooping cough, rabies, yellow fever and tetanus.

INORGANIC CHEMISTRY

The chemistry which is concerned with the elements and non-carbon compounds. In the pre-Christian era elements such as gold, silver, tin, iron, lead and copper had been discovered and used by the ancient Chinese, Hindus, Egyptians and Greeks, together with some of the simpler alloys. By about the middle of the 17th cent. the alchemists were familiar with most of the common metals, their alloys and metallic salts, and some of the acids, alkalis, medicinal minerals and non-metallic elements. Robert Boyle (1627-91) might be considered the first of the modern chemists because of the insistence on experimental method. The discoveries of cobalt (1733) and nickel (1750) were followed by Henry Cavendish's recognition of elementary hydrogen in 1766, the isolation of nitrogen by Daniel Rutherford in 1772, oxygen by Joseph Priestley and chlorine by K. Scheele in 1774. In 1784 Cavendish discovered that water is composed of two volumes of hydrogen to one of oxygen; and in 1789 Klaproth detected uranium in the mineral pitchblende, which led to the discovery of the radioactive compounds of polonium and radium by Marie and Pierre Curie in 1898. The beginning of the 19th cent. witnessed the discovery of a most powerful means of analysing compounds and their elements, viz. electrolysis. This enabled Sir Humphry Davy to decompose the supposed elements soda and potash and in 1808 he isolated the

Syringe for injection

metals sodium and potassium. The spectroscopic method of analysing discovered in 1859 has led to great advances in physical knowledge of the structure of atoms. In 1922, Prof. Jurislav Heyrovsky discovered the polarographic method of analysis. In 1910 it was observed that certain of the radio-elements were identical in chemical behaviour and could only be distinguished by their radioactive constants; and when their atomic weights were determined these were found to be different. This led to the conclusion that chemical analysis may separate matter into types of matter and not into elements. These types, although identical chemically, may be found to be made up of more than one element when examined by other methods. Frederick Soddy gave the name *isotopes* (q.v.) to these chemically identical elements. See ELEMENT; ORGANIC CHEMISTRY.

INQUEST

Inquiry of any kind. In Eng. today the word is confined to inquiries held by a coroner. These concern persons for whom a doctor will not give a certificate stating the cause of death. Since 1927 he need only summon a jury if he thinks that the death was due to violence, such as murder or manslaughter, or to a street accident. See CORONER.

INQUISITION

Any inquiry, but chiefly the inquiry known in the R.C. Ch. as the Holy Office. It was founded in 1248 by Pope Innocent IV, for the suppression of heresy. The first tribunal was set up at Toulouse and was introduced into Italy, Spain, the Netherlands, Portugal, and taken to the New World. It lasted until the 19th cent. but its great age was the 15th cent., and the country where it was most active was Spain where it was closely connected with the State. Under Inquisitors-General, the most notorious of whom was Torquemada, it had an elaborate organisation. Torture was freely used to extract confessions, and the condemned were usually burned with great ceremonial.

INSANITY

State of having an unsound mind, in that one commits actions foreign to accepted social behaviour. Insanity is usually assoc. with disease of brain or derangement of mental process of thought and reason. In severe cases where patient is a danger to himself or to the community he is placed in the care of a mental hospital after certification of mental state by a doctor. See LUNACY.

INSECT

Class of the Arthropoda, a major division or phylum of invertebrate animals. They have jointed appendages, and consist of a larger number of species than any other class of arthropods. Insects are characterised by having the body divided into head, thorax and abdomen, the head provided with antennae, mandibles and other appendages. The thorax bears 3 pairs of legs and in most cases 2 pairs of wings; the abdomen is limbless but may have an ovipositor or its modification. The exo-skeleton is of uncalcified chitin, and may be of considerable thickness. Insects are air-breathers. The sexes are separate, and development is usually in 3 stages involving a larva which metamorphoses into a pupa and this in turn metamorphoses into the chrysalis.

INSULIN

Preparation used in medicine containing specific anti-diabetic principles of mammalian pancreas. The drug is given hypodermically and controls body use of sugar.

INSURANCE

The cover received in exchange for a stated premium paid to secure peace of mind and immunity from loss which might arise from causes beyond the insured's control. The first insurance policies recorded were on foreign

trading vessels and their cargoes and Insurance Cos. began to be formed in the late 17th cent.

INTELLECT

Inherent faculty of the mind in reference to the power of understanding and reasoning, the power of perception and thought. In occultism the intellect is synonymous with the Higher (as compared with the Lower) Mind, the vehicle of the egoic consciousness.

INTELLIGENCE DEPARTMENT

Dept. which collects and interprets the information obtained by Intelligence officers of the army, navy and air force regarding an actual or potential enemy. In Brit. there is an intelligence division at the admiralty, a director of intelligence at the air ministry, and in the army a recognised unit, the Intelligence Corps, which was establd. 1940.

INTELLIGENCE QUOTIENT TESTS

(I.Q.) Tests given to determine the powers of memory, vocabulary, reasoning power and mathematical ability. They were originated in Paris in 1904, when Binet, director of the psychological laboratory at the Sorbonne, made a survey of the intelligence of children in elementary schools. The investigators compiled a list of test questions and the answers enabled them to estab. standards for the average child of each age. The I.Q. figure is determined thus: if a child of 8 years gives results comparable with those of a child of 12 years, his mental age is rated 50% above his chronological age, and his I.Q. is 150. Many industrial and commercial organisations use intelligence and aptitude tests as part of their procedure for selection and promotion.

INTERLAKEN

[in-ter-la-kin] Swiss tourist centre for the Oberland district, Berne canton, on the Aare, between lakes Thun and Brienz. Pop. 5,000.

INTERNATIONAL, The

Name given to a number of Socialist and Labour organisations. The 1st International was founded in London in 1864 and accepted a programme drawn up by Karl Marx. The 2nd (Socialist) International, constituted in 1889, a federation of Nationalist and Socialist Parties, was affiliated to the Labour Party in 1908. The 3rd (Communist) International (commonly called the Comintern) was founded in Moscow in 1919. It sought to win the support of the European proletariat and colonial, semi-colonial, and oriental peoples. When Hitler came to power (1933) it sought to estab. a "popular front" in which Communists, Socialists and Liberals would be ranged against Fascism.

INTERNATIONAL COURT OF JUSTICE

Organisation set up in 1921 by Treaty of Versailles to settle disputes on matters of international law and the interpretation of treaties. It was replaced in 1945 by a similar institution created under the charter of the U.N.

INTERNATIONAL GEOPHYSICAL YEAR

The period July 1957-Dec. 1958 was devoted to a programme of international research into the weather and other natural phenomena. An important project was the launching and subsequent tracking of earth satellites by the U.S.A. in conjunction with the U.S.S.R., for the measurement of pressures and temperatures as well as for observations of cosmic rays, micrometeorites, the geomagnetic field and solar radiation. Another project was the measuring of the level of nuclear radiation on a world-wide basis by a network of stations. For the purposes of meteorological radiation research a new standard scale for expressing measurements of solar energy was adopted generally. Antarctic expeditions included the Commonwealth Trans-Antarctic Expedition. See ANTARCTIC EXPLORATION.

INTERNATIONAL LABOUR ORGANISATION
Intergovernmental agency related to the United Nations and estab'd. at Geneva. The office organises conferences, dealing with labour matters, at which govts., employers' and workers' organisations are represented, with the object of raising the standard of lab.

INTERNATIONAL LAW

Body of law regulating the relations between nations, esp. in time of war. It differs from other bodies of law in that there exists no power to enforce its decisions. The Romans recognised something like Internat. law in what they called *jus gentium*. In the M.A. and later, certain customs were observed, and to give clarity to these, Hugo Grotius in 1625 wrote his *De Jure Belli et Pacis*. This founded modern international law. It is contained in customs, treaties and declarations, and deals with such matters as the treatment of prisoners and wounded, contraband and blockade, the rights of neutrals and the special conditions of maritime and aerial warfare. International law is administered by the prize courts and the international court of justice (q.v.).

INTERNATIONAL MONETARY FUND

Estab'd. after Bretton Woods Conference, 1944, to promote internat. monetary co-operation. See UNITED NATIONS.

INTERNATIONAL POLAR YEAR

Name given by scientists to year devoted to polar meteorological research. The first was 1882-3. This was brought about by the Internat. Meteorological Committee which, in 1879, appointed a special commission to organise temporary observatories in the N. polar region for one year. During the second Polar Year, these researches were extended to include the importance of the ionosphere in radio communications. A third Polar Year, held from July 1957 to Dec 1958, was known as *The International Geophysical Year* (q.v.).

INTERPOL

(International Criminal Police Commission) Internat. police organisation designed to counter the growing internationalism in crime and to abolish national frontiers in pursuit of the criminal. Founded in Vienna in 1923. The central radio station is situated near Paris and every year the police chiefs of the member states meet to co-ordinate new methods of detection and prevention.

INTESTATE

Person who dies without making a will. In such cases Eng. law provides that the property shall pass according to certain rules. If a man or woman dies, the surviving spouse takes all the furniture and personal effects and £5,000 free of death duties. If there are children, or a child, the remainder is divided into 2 equal parts. One is put in trust and the income paid to the surviving spouse, passing on his, or her, death to the child or children. The other half passes to the children, if they attain 21 years of age. If an unmar. person, or a widow or widower, without children, dies the property passes to the parents. If they are dead it passes to the brothers and sisters in equal shares, and if there are none, to more distant relatives. If there are no relatives within certain limits the estate passes to the crown.

INTESTINE

Part of alimentary canal beginning at exit of stomach and ending at anus. It is a long continuous muscular tube which receives the various digestive juices—and secretes its own juice. The process of digestion is completed, waste products are collected for voiding at next bowel movement. There is a small intestine or proximal part which connects duodenum with large intestine or distal part. The parts of the large intestine are described under colon (q.v.).

Diagram showing human intestine.

INTUITION

In Eng. philosophy the term is sometimes used to denote a spiritual inspiration which enables us at once to know the distinction between what is correct and incorrect, or right or wrong. The German philosopher Kant (1724-1804) distinguished between the two modes of perception, calling the first *empiric intuitions*, i.e. those conveyed to the senses from external objects, and the second *pure intuitions*. In the philosophy of Henri Bergson (1859-1951) intuition is that sympathetic attitude to the reality without us that makes us seem to enter into it, to be one with it, to live it.

INVERGORDON

Burgh and seaport of Ross and Cromarty, on Cromarty Firth, 13 m. N. of Dingwall. It was a naval base in both world wars.

INVERNESS-SHIRE

Largest county of Scot. with an indented coastline on the W. It consists of 2 portions, the mainland, and Skye, Harris, N. Uist, S. Uist and many other Is. of the Hebrides. The Caledonian Canal, traversing Glen More, cuts the mainland area in 2. The shire contains wild and beautiful scenery. The soil is infertile and most of it is devoted to deer forests and grouse moors, with only a small portion for sheep rearing. The chief rivers are the Spey, Ness and Beaulie. In the county are Ben Nevis and other mts. Inverness is the county town; Fort William is the only other town of importance. With Ross and Cromarty, the county returns 3 members to Parl. Pop. 82,264. Inverness, Burgh and county town of Inverness-shire. The recognised cap. of the Highlands, Inverness stands on the N. side of the Ness near the point where it flows into the Moray Firth. Industries include distilling, shipbuilding, tweed manufacture and railway works. Pop. 29,603.

IODINE

Bluish solid element, volatile at ordinary temps., producing an irritating vapour. Discovered by Courtois in 1811, it occurs as iodides in sea water and seaweed. By far the greater part of the world's supply is extracted from caliche—a natural form of sodium nitrate. Iodine is added to table salt and animal feeding-stuffs.

ION

[i'] Electrically charged atom. When, e.g. copper sulphate, CuSO_4 , is dissolved in water, or in a solution of organic salts, most of its molecules break up into 2 ions, one being Cu^{++} —a copper atom with 2 units of positive charge, and the other SO_4^{--} —the remainder of the molecules with 2 units of negative charges. In a gas, ions may be formed by such agencies as X-rays and fast atomic particles. See ELECTROLYSIS.

IONA

One of the Inner Hebrides, off the W. coast of Mull, Argyll. Fishing and sheep and cattle breeding are the principal occupations. St. Columba landed there in A.D. 563 and laid the foundations of his monastery, which developed into the most famous centre of Celtic Christianity, whence missionaries were sent to Scot.

and N. Eng. The cath. church of St. Mary dates from the 13th cent. Restoration work has been done by the Iona Community.

IONIAN

[i-ō-ni-ān] Name of one of the chief races that settled in Greece in ancient times. They may have arrived as early as 1500 B.C. About the 11th cent. B.C., many of them settled on the coast of Asia Minor, where a district was named after them. The Homeric poems are in the Ionian dialect. Ionian Islands. Is. of Greece, off the W. coast in the Ionian Sea. The chief are Corfu, Cephalonia, Zante and Levkas. The chief town is Corfu. From 1814-64 they were under Brit. protection, being then handed over to the new kingdom of Greece. The islands have frequently suffered from earthquakes. The most violent occurred in 1953, when over 400 people were killed and c. 3,000 left homeless. The ports of Argostoli and Lixouri were completely destroyed. Area: 750 sq. m. Pop. 212,573. Ionian Sea. Part of the Medit., lying S. of the Adriatic Sea and bounded on E. and W. by Greece and Italy.

IOWA

Prairie state of the U.S.A. lying between the Mississippi and Missouri rivers. It is chiefly an agricultural state. Maize, wheat, barley, rye, soya beans and potatoes are grown, and livestock are kept in great numbers. Coal is mined. Des Moines is the cap. Iowa was settled in 1788, and became a state in 1846. There are 8 representatives in Congress. Area: 56,290 sq. m. Pop. 2,780,000.

IPECACUANHA

[ip-i-kə-wə-'nā] Dried, knotted roots of *Uragoga ipecacuanha*, native to Brazil, exported chiefly from Rio de Janeiro. The drug has an acrid, bitter taste and faint odour, and is used as a powerful emetic and expectorant.

IPSWICH

County borough and county town of E. Suffolk, on the Gipping. The industries include engineering works, tobacco factories and chem. works. Clothing and agricultural implements are made. It returns 1 member to Parl. Pop. 118,410.

IRAN See PERSIA.

IRANIAN LANGUAGES

Branch of Indo-European, including Avestic, Achaemenian (inscriptions 520-350 B.C.), Pahlavi, and modern Persian, Kurdish, Baluchi, Pushtu, Ossetic.

IRAQ

[i-rāk] Country of the M.E. bounded by Saudi Arabia, Jordan, Syria, Turkey and Persia, with a short coastline on the Persian Gulf. Most of the country consists of the fertile alluvial plain of the Tigris and Euphrates. The soil is rich, but there are extensive areas where irrigation is necessary. Dates, cotton, wheat and barley are grown, and wool produced. There are oilfields. Baghdad is the cap. and Basra is the chief port. Iraq became a state in 1919 under Brit. mandate. The mandate was terminated in 1932. In Feb. 1958, Iraq and Jordan united to form the Arab Federal State, but this was disbanded the same year after the murder of King Feisal II and the Regent. Brig. Kassem was P.M. 1958-1963, killed in a milit. coup. Col. Abdul Salam Arif was Pres. 1963-1966, died in plane crash. In April 1966 he was succeeded as Pres. by his brother Abdul Rahman Arif. In 1964 Iraq and Egypt signed a polit. agreement with a view to eventual union. Area: 169,240 sq. m. Pop. 6,803,153.

IRELAND

Is. of Europe, lying W. of Gt. Brit. In 1922 it was divided into two states: Eire, comprising the provs. of Leinster, Munster and Connaught, and N. Ireland, which includes most of the prov. of Ulster. The mts. of Ireland are periph-

eral, surrounding a central plain which is flat and boggy. There are enormous areas covered with peat, used as fuel. The chief river is the Shannon, which is used to generate electric power. There are many lakes. The few Is., chiefly of the W. coast, include the Aran and Achill groups. The W. coastline of Ireland is indented, the bays forming some of the finest harbours in the world. Notable are Cork and Waterford on the S. coast. The climate is mild and damp, with heavy rainfall in the mt. or extreme W. districts. Area: 32,408 sq. m. Pop. c. 4,243,803. In early times Ireland was the centre of Christianity and learning. It was ruled by a number of kings and chiefs, who were more or less subject to a king at Tara. In the 8th cent. and later, it suffered from the inroads of Scandinavian pirates, until their decisive defeat at Clontarf by Brian Boru in 1014. In the reign of Henry II Ireland became definitely assoc. with Eng. Much land was taken from the native inhabitants and given to the Eng. settlers, and there grew up side by side 2 distinct classes, one dominant and landowning, the other servile and landless. The Eng. were predominantly Protestant, and the Irish R.C. The Eng. lived within the district around Dublin called the Pale, and there filled the offices of state and controlled the parl. The antagonism between the 2 races and creeds grew steadily worse, and in the time of Elizabeth there were constant and terrible wars in Ireland. In the 17th cent. James I settled, or planted, Scotsmen in Ulster. This caused a rising, and in 1642 there was another orgy of massacre and ruin, this time in the N. This was put down and at the end of the civil war came the conquest of Ireland by Cromwell. The struggle between William III and James II was fought out in Ireland, and when it was over a new period of Protestant ascendancy began, with the introduction of the Penal Code. R.Cs. could hold no offices whatever, nor even possess land in their own country. Restrictions on commerce forbade anything that might possibly compete with Eng. traders. After 1750 there was some relaxation. The laws against R.Cs. were made less severe, and the trading restrictions removed. In 1782 Ireland was given legislative indep. but the right to vote and sit in Parl. was still confined to Protestants. In 1798, with Brit. at war with Fr., there was a rising in Ireland, but this was crushed at Vinegar Hill. In 1800 the parl. was abolished and the U.K. of Gt. Brit. and Ireland came into being. R.C. emancipation was delayed until 1829. Conditions seemed somewhat better when the terrible potato famine broke out in 1845. The pop. was reduced by starvation and emigration to c. 1/3. For the rest of the cent. the hist. of Ireland was one of agitation against Eng. rule, except in Ulster, where the Eng. connection was valued. Members, called nationalists, were elected to Parl. to work for some degree of indep. for their country and Gladstone 3 times tried to give Ireland Home Rule. He failed to convince the Eng. people of the wisdom of this policy, which was opposed bitterly by the Protestants of Ulster. In 1914 a measure of Home Rule was granted, but the outbreak of war prevented its operation. When the struggle ended, a new party (called Sinn Féin) dominated the country. They set up an Irish Repub., a step which was followed by 2 or 3 years of terrorism. Finally a treaty was signed in 1921 by which the Irish Free State was created, and the counties which refused to be separated from Brit. were formed into a separate state known as N. Ireland. In 1949 the Repub. of Ireland Act came into operation. By this the Irish Repub. was declared a sovereign, indep. state. See IRELAND, REPUBLIC OF; NORTHERN IRELAND.

IRLAND, John

(1879-1962) Eng. composer. A pupil of Stanford. He wrote many pianoforte pieces and songs.

208 · IRELAND, CHURCH OF

His works include a piano concerto, symphonic rhapsody for chorus and orchestra, and chamber music.

IRELAND, CHURCH OF

St. Patrick made his first missionary visit A.D. 432. Opposition to papal claims ceased after the Synods of Kells, 1152, and Cashel, 1172. The Dissolution of the Irish Monasteries took place 1528-38. The Act of Catholic Emancipation was passed in 1829, and the Act of Disestablishment in 1869.

IRELAND, REPUBLIC OF

Formerly known as Eire or the Irish Free State. The chief occupations are agriculture and fishing. Dairying is becoming increasingly important. Crops include cereals, potatoes, turnips and mangolds, sugar beet and flax. There are various manufacturing industries. The cap. and largest town is Dublin; other towns are Cork, Dun Laoghaire, Limerick and Waterford. Eire is the national language, but Eng. is also used. There are steamer services with Gt. Brit. to Glasgow, Liverpool and Fishguard. Shannon Airport lies on the trans-Atlantic route. The Irish Free State, a republic, was created Dec. 1921. The first general election was held in Dec. 1922. William T. Cosgrave's party was successful, and for 10 years he remained pres. of the executive. The elected members of the Repub. party refused at first to take the oath of allegiance, but later under Eamon de Valera (q.v.) took their seats and became the official opposition. In Feb. 1932, the Republican party secured a majority in the Dail and de Valera took Cosgrave's place as pres. His ministry decided to abolish the oath of allegiance and then refused to remit to Gt. Brit. the interest due on the money borrowed for the purchase of land. In 1937 a new constitution was approved, under which links with the Brit. Commonwealth were loosened. During World War II, Eire remained neutral. In 1949 the Repub. of Ireland Act declared Eire a sovereign, indep. state outside the Commonwealth. The head of state is the pres., who serves for 7 years. Parl. consists of 2 houses, a house of representatives (*Dail Eireann*) and a senate (*Seanad Eireann*). Area: 26,600 sq.m. Pop. 2,818,341.

IRETON, Henry

(1611-51) Eng. soldier. Originally a lawyer, in 1642 he joined the parl. army. He was closely assoc. with Cromwell. In 1645 he was elected an M.P. and later, as one of the judges of Charles I signed the death warrant.

IRIS

Genus of hardy flowering plants, of 2 sorts, bulbous and non-bulbous. There are many varieties of each, known as Spanish, Japanese, Eng. and Dutch irises.

IRIS

Membranous contractile curtain surrounding the pupil of the eye of vertebrate animals. It dilates or contracts to regulate the amount of light entering the eye through the pupil.

IRISH LITERATURE

Early hymns, religious poems, romances, etc., are preserved in MS. miscellanies called the 'Books' of Armagh (807), Leinster (c. 1100), Lecan (1407): Ballymote (c. 1400), Lismore, Fermoy, Maine (c. 1350), the *Lebor na h'uidre* (11th cent.), *Leabhar Creac*. Most important are the romances: (1) the Ulster cycle, represented esp. by the great epic *Tain Bo' Cuailgne*, prob. first written in 7th cent. and telling of the hero Cuchullinn, Ailill and Medb (Maev) of Connaught (c. 1st cent. A.D.); (2) the later S. or Leinster-Munster cycle of Finn or Fionn (d. c. A.D. 283) leader of the warriors Fianna and father of Ossian.

IRISH SEA

Arm of the sea between Gt. Brit. and Ireland. It is connected with the Atlantic Ocean by St.

Patrick's Channel in the N. and St. George's Channel in the S.

IRISH TERRIER

Believed to have originated from the old broken-haired black and tan terrier. Rather aggressive. Red and gold in colour; wt. c. 23 lb. Excellent for vermin destruction.

IRON

Silvery metallic element, widely distributed as oxides, and forming 5 % of the earth's crust. The manufacture of iron was in Eng. in the time of the Romans, charcoal being used to smelt the ore. Today pig or cast iron is made by mixing the ore with coal, coke and limestone, and passing it through a blast furnace. Iron is easily magnetised and is a fairly good conductor. Sp. gr. 7.9. Chem. sym. Fe.

IRON AGE

In archaeology a cultural phase marked by the use of iron. In Europe and W. Asia it usually followed the copper-using or bronze-using phase or age; in Africa it directly succeeded the stone age. In Europe ironworking became general in the Med. region c. 1000 B.C. The two periods are characterised esp. by finds at Hallstadt and La Tène respectively.

IRON CROSS

German order founded in Prussia 1813. Divided into a civil and milit. division, there are 3 grades.

IRON GATES

Name given to a narrow passage, c. 2 m. long, in the course of the Danube, near Orsova, Rumania.

IRON LUNG

ISRAEL

Jewish national state, bounded by Lebanon, Syria, Jordan and Egypt, with a coastline on the Medit. It occupies the greater part of the territory formerly known as Palestine (q.v.). The country consists of 4 zones: the coastal plain and the plain of Esdraelon; the inland plateau, the Negev, a semi-desert area in the S.; parts of the Jordan Valley, including Lake Merom, Lake Tiberias and the S.W. shore of the Dead Sea. The summers are hot, rain falling mainly from Oct. to April. Much of the country is fertile. Crops include citrus fruits, olives, wheat, barley, pulses and millet. Dairying is becoming important. Oil was discovered at Heletz in 1955. The chief towns are Jerusalem, the cap. (q.v.), Tel-Aviv, Jaffa, and Haifa, the chief port. The majority of the people are Jews. Hebrew is the official language, and there is a Hebrew univ. founded 1925. The State of Israel was formed May, 1948, when the Brit. mandate ended. On the next day the frontier was crossed by troops of Lebanon, Syria, Jordan and Iraq. Hostilities ceased Jan. 1949. Under armistice agreements, Israel retained most of her territory, and Jerusalem was divided between Israel and Jordan. Border fighting between Israel and Egypt broke out, and in Oct. 1956, Israeli troops pushed the Egyptians across the Sinai Desert to the Suez Canal. Fr.-Br. mil. intervention and later a U.N. police force prevented spread of war. By June 1967, the situation became intolerable to both sides. U.N. troops withdrew and fighting broke out. After 4 days Israel had driven U.A.R. forces beyond the Suez Canal. A ceasefire was accepted, June 10, but the situation remains tense. See EGYPT. Israel is governed by a pres., an executive council and a constituent assembly. Ar. c. 7,993 sq.m. Pop. 2,330,000.

ITALY

Repub. of Europe, bounded in the N. by Fr., Switzerland, Austria and Yugoslavia. The greater part of the country forms a long peninsula, extending S.E. into the Medit. Included in the republic are the Is. of Sicily and Sardinia (q.v.). Italy proper consists of (1) the extensive N. Plains, surrounded on 3 sides by the Alps and Apennines, and drained by the Po and its tributaries and by the Adige and Piave. There are many lakes, including Maggiore, Como, Garda, Lugano; (2) the long narrow peninsula, bounded by the Adriatic, Ionian, Tyrrhenian and Ligurian seas. The Apennine Mts. form the backbone of the peninsula. The Arno, Tiber and Volturno are the most important rivers. The lowlands of the W. particularly near the Arno and around Naples, are extremely fertile. The climate over most of the country is Medit. with mild, wet winters and hot, dry summers. The N. Plains, shut off by mts. from sea influences, have a more continental type of climate. Italy is an agricultural country. Mulberries are cultivated for the silkworm industry; cotton and flax are also grown. Sheep and goats are reared; the dairying industry is primarily concerned with the manufacture of cheese. Sulphur production and marble quarrying are important. Hydro-electric power is important. Manufactures include textiles, iron and steel goods, chem. products and agricultural machinery. Rome is the cap.; other towns are Milan, Naples, Turin, Genoa, Florence, Bologna, Venice, Verona and Leghorn. By a treaty between the Holy See and Italy in 1929, the R.C. religion was estab'd. as the state religion. Italy became a repub. in June, 1946, and a new constitution came into force in Jan. 1948. The pres. is elected for a term of 7 years; parl. consists of 2 houses, a chamber of deputies and a senate. For admin. purposes the repub. is divided into 19 regions. Area: c. 116,280 sq.m. Pop. 50,464,000. Until modern times Italy was merely a geographical expression. Rome was the heart of a great Rom. empire and when Rome fell Italy was overrun by barbarians. In 800 it became part of the empire founded by Charlemagne, and was nominally included in the Holy Rom. Empire until its dissolution in 1806. In reality it was divided into a number of indep. states. Some were repubs. such as Venice and Genoa; some like Naples, kingdoms. In addition there were the Papal States. Among the important rulers in Italy was the Count of Savoy, who in 1418 obtained Piedmont. In the 19th cent., the King of Sardinia was the centre of the movement for the union of Italy. Lombardy was secured in 1859, Tuscany and other areas in 1860, and in 1891 Victor Emmanuel, King of Sardinia, was declared King of Italy. He secured Venice in 1866 and the Papal States, ex-

cept the Vatican itself, in 1870. The difficulty with the Vatican was not adjusted until 1928. In 1915, Italy entered the war on the side of Gt. Brit. and Fr. and carried on campaigns against Austria. The period after the war was one of economic and social unrest which led to the establishment of a Fascist govt. under Benito Mussolini. Under this régime, great economic progress was made, the great debts were liquidated and much colonial development took place. Great strides in internal reform and social services took place between 1924-43. In 1935 Italy declared war on Ethiopia. In 1937 Hitler and Mussolini exchanged visits and the Rome-Berlin 'Axis' was formed. War was declared on the Allies in June, 1940, and on the U.S.A. in Dec. 1941. Defeats by the Allies in N. Africa were followed by the invasion of Sicily in 1943. Mussolini was overthrown and a democratic govt. estab'd. In 1945, Mussolini was captured by partisans while trying to flee the country, and shot. The king, Victor Emmanuel III, abdicated in favour of his son, Umberto II in 1946. The king's reign was short, however, a repub. being estab'd. in June, 1946.

JERUSALEM

Cap. of Israel and chief city of the Holy Land, 33 m. from Tel-Aviv-Jaffa, c. 15 m. from the Dead Sea. Nearly 4,000 ft. above sea level, it was inhabited in ancient times. It was captured by David c. 1000 B.C. and became the national centre of the Jews. Temples were built by Solomon, Zerubbabel and Herod. It witnessed the d. of Christ and was destroyed by Titus A.D. 70. In 135 the Emperor Hadrian rebuilt the city, and c. 200 years later Constantine the Great built a ch. on the site of the Holy Sepulchre. This attracted thousands of pilgrims from Europe, and for the next 300 years it was a prosperous Christian city. In 637 it was taken by the Arabs, and to recover the Holy Places, the first crusade was organised. In 1099 Jerusalem was taken and until 1187 was the cap. of a Lat. kingdom. In 1517 it became a Turkish possession. It remained part of the Turkish realm until Brit. troops entered it in 1917, and a Brit. mandate was establd. Following the partition of Palestine (q.v.) 1948, and the hostilities between Israel and Jordan, Jerusalem was made a U.N. Area. The city has been divided between the two states, and, 1950, the Israeli parl. proclaimed it cap. of Israel. Two hills, Zion and Moriah, are in the S., overlooking the valley of Himmon. The main objects of Christian veneration are the Holy Places. The Mosque of Omar is the chief of several mosques. The Wailing Wall is sacred to the Jews. Arab sector of the city occupied by Israel (1967).

JESUITS

Popular name for the religious order known as the Soc. of Jesus. It dates from 1543. The order soon became very influential. Whilst retaining its orig. purpose of converting the heathen, its members concerned themselves with polit. affairs, esp. in the 16th and 17th cents. Paraguay came under the rule of the order, one of the few instances in the world's hist. of a theocracy. In N.-Amer. the labours of the Jesuits are among the most heroic in the annals of missionary work. In the 18th cent. the polit. work of the Jesuits was suspect in several countries. In 1759 they were expelled from Portugal. Fr. and Spain followed this example, and in 1773 the Pope suppressed the order, which, however, was revived in 1814.

JESUS CHRIST

(4 B.C.-A.D. 29 or 30) The central figure of Christianity. Jesus is the Greek form of the Hebrew Joshua, meaning saviour. Christ is a Gk. title, 'anointed', representing the Hebrew Messiah. Nothing is known of Christ's early life beyond what is contained in the 4 gospels. According to these He was b. in the stable of an inn at Bethlehem. His parents were Jews, Mary and Joseph, the latter a carpenter of Nazareth, but the accepted Christian belief, based on passages in the gospels of St. Matthew and St. Luke, is that Mary was a virgin. The date was fixed in the 6th cent. as the year 1, but modern calculations have placed it in 4 B.C. Dec. 25 is kept as the natal day. 'Only one event of His boyhood is recorded. When 12 yrs. old He went to Jerusalem with His parents and was found by them debating with the doctors in the Temple. He worked as a carpenter until He was 30 yrs. old. When He entered upon His life work, He was baptised by a relative, John, in the Jordan, and passed 40 days in retirement in the wilderness, where He was tempted by Satan. He then gathered around Him 12 followers or disciples and spent nearly 3 yrs. teaching and preaching. Of His teachings, many take the form of parables; they are summarised in the Sermon on the Mount. He performed many miracles, mainly deeds of healing. His teaching lays stress upon the love of God to man and contains sayings of infinite wisdom and universal application. He claims for Himself the position of the Son of God and the Interpreter to man of the divine will. After nearly 3 yrs. of teaching, the officials decided to stop His activities. He was at Jerusalem and had just taken His last supper, with His disciples, when, through the agency of one of the 12, Judas Iscariot, He was seized and tried before Pontius Pilate who found Him guiltless, but after some hesitation sentenced Him to d. He was then crucified, on a hill called Calvary, between 2 thieves, dying on a day since commemorated as Good Friday. His body was moved to a tomb by one Joseph of Arimathea. The Christian Ch. believes that after 2 days in the tomb He rose from the dead and appeared to various followers. After 40 days He made in their presence His final ascension into Heaven.

JET

Black lustrous form of lignite resembling cannel coal, but harder and blacker. It is light in wt., easily cut, and takes a high polish. It is used for making ornaments, etc.

JET PROPULSION

The theory of jet propulsion is to be found in Newton's second Law of Motion which states that the change in momentum of a system is equal to the external forces applied to the system. This is used in aircraft jet engines where the incoming air is compressed, heated, greatly accelerated by the turbine and ejected as a high speed jet forcing the aircraft to move forward. The pure-jet engine, or turbojet, consists of a combustion space in which fuel is mixed with compressed air and burnt, an air compressor, a turbine wheel and a pipe through which the products of combustion are ejected. The function of the turbine is to extract sufficient energy from the flow of exhaust gases to drive the compressor. Sometimes fuel is burnt in the jet-pipe to provide additional power at

take-off, or in combat. This is known as after-burning or reheat. Turboprops are basically similar to turbojets, but deliver very little jet thrust. In the turboprop, the turbine extracts practically all the energy from the stream of gases. Power surplus to that required to drive the compressor is taken forward by means of an extended drive-shaft, to a propeller. Owing to the fact that the turboprop and propeller handle an enormous mass of air at a relatively low velocity, the propulsive efficiency is very high up to speeds of approximately 450 m.p.h. At greater speeds the turbofan or by-pass turbojet is more efficient, this in effect being a turbojet driving a 'fan' which can either be thought of as an enlarged axial compressor or as a multi-stage shrouded propeller discharging atmospheric air around the hot parts of the engine. At speeds greater than that of sound, the straight turbojet is more efficient. See ROCKETS.

JEWS

Race of Semitic origin. The word Jew (corrupted from Yahudim) means a man of Judea, or of Judah. A synonym is Hebrew. The early hist. of the Jews is narrated in the O.T., the facts being supplemented and corrected from other sources and by the results of archaeological research. They appear to have migrated from Mesopotamia to Palestine c. 2000 B.C., led by the patriarch Abraham. Some 250 years later they moved with their flocks into Egypt. Some 430 years later (c. 1320 B.C.) they fled the country under the leadership of Moses and spent 40 years wandering in the wilderness. Entering Canaan, the modern Palestine, the Jews conquered the tribes there. They divided it among their 12 tribes named after the sons, or grandsons, of Jacob, also called Israel, one of their patriarchs. The priestly functions were allotted to the clan of Aaron of the tribe of Levi. The Jews were ruled at first by judges, but later they took a king called Saul. He was succeeded by David and then by Solomon. At Jerusalem, their cap., Solomon built a magnificent temple which served as the centre of the national life. Soon after the death of Solomon, the Jewish kingdom was divided into two, Judah in the S. and Israel in the N. These came to an end in 586 and 721 B.C. respectively, and for a time the Jews were captives in Babylon. After the overthrow of the Babylonian Empire by the Persians, Ezra and Nehemiah led the tribes of Judah and Benjamin back to Jerusalem. The temple was restored in 520 and (c. 444) Ezra promulgated his famous legal code. Later the Jews came under the dominance of the Egyptian Ptolemies and the Syrian Seleucids. The priest kings, or Maccabees revolted and won freedom in 165 B.C. At the time of Christ the land was part of the Rom. Empire. In A.D. 70 the Emperor Titus destroyed their temple and soon they were driven out of Palestine and scattered. Since the dispersion, or diaspora, the Jews have been found in almost every country in the world and have suffered almost continuous persecution. They were expelled in the 12th cent. from Eng. but allowed to return in the 17th. In the 19th they were granted equality with other citizens. Successive persecutions, restrictions and expulsions deprived them of settled occupations and threw them into money-lending, in which, in time, they excelled. Where freedom and full citizenship was accorded they made contributions to Philosophy, Science and Art, e.g. Bergson, Spinoza, Heine, Einstein, Mahler, Bloch, Epstein. In the 19th cent. there arose a movement called Zionism, to get the Jews back to Palestine. It received an impetus, when, as a result of World War I, Palestine was taken from the Turks and Mr. A. J. Balfour, Brit. Foreign Sec. declared that the Govt. would use its best endeavours to establish in Palestine a national home for the Jewish people. Between

the World Wars some progress was made but, under Hitler, European Jewry suffered tortures more terrible than any in recorded hist. It is estimated that from 1939-45, 6,000,000 Jews lost their lives. When World War II ended, Palestine was still being governed under a Brit. Mandate. For a time Jewish subversive forces carried on guerrilla warfare against Brit. troops and police, which resulted in the steady deterioration of Anglo-Zionist relations, loss of life, etc. The question of the future of Palestine was referred by Brit to U.N.O. in 1947 and when, in May, 1948, the Mandate was handed back to U.N.O. and Brit. troops left the country, the Jews in Palestine proclaimed the state of Israel (q.v.). In 1949, the migration of Jews from all over the world, rich and poor alike, reached the figure of 300,000. Religion. Jewish religion is composed of 2 elements, theology and ethics. Theologically, the main tenet is adherence to monotheism. Ceremonial in synagogue is conducted in Heb. and rabbis regularly expound and discourse on Mosaic Law. Ethics, laid down in the *Talmud*, provide a complete guide to the good life. The Jewish year begins in Sept. or Oct. and has 12 or 13 lunar months varying as between ordinary and leap years. Fast days or festivals are widely observed. The literary language of the Jews is Heb. The spoken language is Heb. in the land of Israel, but elsewhere, in addition to the language of the country of residence, Yiddish is spoken. This is a Germanic dialect interspersed with Heb., Aramaic and Slavonic words.

JUDDA

KOREA

Country of E. Asia, consisting for the most part of a peninsula extending S. from Manchuria. It is bounded by the Yellow Sea and the Sea of Japan. The land is forested and mountainous. Rice, barley, wheat, beans, tobacco and cotton are grown and cattle are reared. Gold, copper, iron ore and coal are mined to a slight extent. The chief towns are Seoul (Keijo), Pusan (Fusan), Pyongyang (Haejo), Taegu (Taikyū), and Inchon (Chemulpo). Korea, whose troubled hist. goes back 1,000 years B.C. was an indep. kingdom in the 10th cent. After the devastating invasion of the Japanese in 1592-8, it was until recent times nominally under Chinese suzerainty. After the Russo-Japanese War of 1904-5 Korea was formally annexed by Japan, 1910. At the end of World War II, Korea was occupied by troops of the U.S.A. and U.S.S.R. and the 38th parallel was chosen as the line of demarcation of the zones of occupation. N. Korea was governed by a People's Repub. under the aegis of Russia and S. Korea became a repub. under the aegis of the U.N. On June 25, 1950 the N. Korean govt. staged a surprise attack against the S. Koreans, and their armed forces crossed the 38th parallel. The U.N. Security Council, with the backing of Pres. Truman, decided to oppose this unprovoked aggression by sending assistance to the S. Korean forces. Gen. Douglas MacArthur was apptd. supreme commander of the S. Korean forces. On Sept. 15, large U.N. forces made landings at Inchon and an offensive began which ousted the invaders from S. Korea and drove them at one point to the Manchurian border. On Nov. 26, some 200,000 Chinese crossed the Manchurian Border to aid the N. Korean forces and developed an offensive which forced the U.N. troops to fall back to a line which approximated the 38th parallel. In July, the Soviet U.N. representative proposed a conference to discuss an armistice. Cease-fire began at Kaesong on July 10, but the Communists suspended the peace talks on Aug. 23. The cease-fire agreement was resumed on Oct. 22. On Mar. 14, the Soviet accused the U.S. of using germ warfare and on Oct. 21 the proposed talks broke down on the p.o.w. issue. Negotiations for an armistice went on, and this was reached at Panmunjon on July 27, 1953. Throughout the war the U.N. forces suffered one great disadvantage, viz that except at the risk of extending the war, they could not invade Chinese soil or bomb the airfields which the enemy used as their fighting bases. Had Chinese territory been violated, the terms of the Russia-Chinese treaty were such that Russia would have been compelled to enter the conflict. Three years of war resulted in heavy milt. and civilian casualties and in the almost complete devastation of the aggressor's territory without any compensating gain. N. Korea—Area: 48,000 sq. m. Pop. 6,500,000. S. Korea—Area: 37,000 sq. m. Pop. 24,994,000.

LAW

Word meaning rule or order. It is used in two main senses. The first is for an inevitable order of the universe, as the laws of motion or the laws of cause and effect. In the second it refers to a rule laid down for human action, disobedience of which is likely to be followed by some penalty or inconvenience. Laws appeared at a very early stage in human hist. Religion played a great part, and early laws were regarded as the commands of a god. This idea in modern times is partly responsible for what is known as the moral law. Among primitive peoples custom was an important factor, and many early codes of law, e.g. the laws of Eng. before Norman times, are merely collections of accepted customs. The lawgivers of ancient times, such as Hammurabi and Moses, did not make laws; they restated those already existent. The Gks. had a developed system of law, but modern law owes its greatest debt to the Romans. They divided law into the civil, or national law, and the law of nations, which is the basis of international law. Another division of law is into the civil law, and the canon or eccles. law, and another is into the common, or unwritten law and the statute law, a classification familiar in Eng. The unwritten law is called case law, or law as interpreted by the judges. In Eng. as in other countries, the criminal law has been separated from the civil law. Today every country has its own legal system. Each system has 3 essentials, an individual, or body, with power to make laws, a body of judges to declare them, and another body to enforce them. International law must be excepted from these statements, because as yet no power to enforce its orders has been created. Lawyers are divided into several classes, but entrance to each is everywhere a privilege guarded by educ. and other tests. Law Lord. Name given in Eng. to the 9 Lords of Appeal in Ordinary. They sit in the House of Lords as life peers. See BARRISTER; SOLICITOR.

LIGHT

Electro-magnetic vibration of wavelength between 4,000 and 8,000 Å.U. approx. It causes the sensation of sight by its action upon the eye. The speed at which light travels is about 186,000 m. per sec. Newton was the first to demonstrate that a beam of sunlight, when transmitted through a prism, is broken up into a spectrum, the colours being red, orange, yellow, green, blue, indigo and violet. It is now known that beyond the red end of the spectrum are invisible heat or infra-red rays, and similarly beyond the violet end, other invisible ultra-violet rays. For measuring the distance of the stars from the earth, a light year is taken as the unit. This is the distance travelled by light in a year and is calculated at 6 million million miles (6,000,000,000,000). See RELATIVITY.

LIGHTHOUSE

Building provided with powerful illumination to guide ships in dangerous waters. Lighthouses are built either on the coast or on a rock, and usually take the form of a tower or high building surmounted by a 'lantern'. Lightship. Vessel used for giving warning of sandbanks and other dangers to navigation on the coast. Moored in shoal water it bears at its masthead a form of lantern as a warning signal.

LIGHTING

For purposes of illumination, candles, rush lights and oil lamps were early devices. With the invention of the Argand burner in 1783 and the introduction of petroleum, greater efficiency was obtained. From the 19th cent. coal gas was used; the invention of the Welsbach incandescent mantle in 1886 giving a marked increase in lighting power. A further advance came with the use of electric arc lamps and the introduction of the incandescent electric bulb by Edison and Swan in 1879 and 1880. See ELECTRICITY; COAL GAS; FLUORESCENT LIGHTING.

[le-moʒ] City of Fr., cap. of Haute-Vienne dept., c. 250 m. S. of Paris, on the Vienne, famous for its porcelain. Pop. 120,596.

LIMPET

Widely distributed marine gasteropod molluscs with conical shells. The common limpet (*Patella*) clings to rocks with its sucker-like foot. It feeds upon seaweed. Millions are collected annually for bait. See GASTEROPODA.

**LINCOLN, Abraham**

(1809-65) 16th Pres. of the U.S.A. B. in a log cabin in Kentucky. His mother d. when he was a boy. He was known as a man of unusual strength and was popular as a story teller. He earned a living on the land, then became a clerk at New Salem, Illinois, and went on a campaign against the Indians in 1832. He qualified as a

lawyer in 1836, and began to practise at Springfield in 1837. In 1834 he was elected to the legislature of Illinois, where he became leader of his party. In 1847 he was elected to the House of Representatives at Washington. The Republican party was formed to prevent any extension of the slave holding area; Lincoln soon became its leader in Illinois and continued a series of debates with Stephen A. Douglas, begun in 1839-40. He was nominated for the presidency and in 1860 was elected. In 1861 the S. States seceded and the Civil War began, the N. States being under Lincoln's direction. In 1863 he announced the emancipation of the slaves. In 1864 he was again elected Pres. In April, 1865, Lee surrendered, and the N. was finally victorious. The Union was saved and Lincoln's aim in going to war was achieved. Only 5 days later he was shot by J. Wilkes Booth, when at the theatre.

LINCOLNSHIRE

County of Eng. with a long coastline on the N. Sea, from the Humber to the Wash. The principal rivers are the Trent, Witham and Welland. The county is flat and the soil is fertile. Fishing is an industry. In the N. is a coal and iron field, while in the S.E. is the fen district and much reclaimed land round the Wash. Lincoln is the county town; other towns are Grimsby, Boston, Grantham and Sleaford. The whole county returns 9 members to Parl. (2 borough constituencies) Pop. 743,383. Lincoln, City, county borough and county town of Lincs. on the Witham. Industries include engineering works and flour mills. The Gothic cath. is magnificent. L. was a Rom. city. It returns 1 member to Parl. Pop. 76,930.

LINDBERGH, Charles

(1902-) Amer. airman. He entered the Air-mail Service of the U.S.A. In May, 1927, he was the first to make a W.-E. solo-crossing of the Atlantic, for a prize of £5,000. His monoplane, *The Spirit of St. Louis*, flew from New York to Paris in 33 h. 50 m. Pub. *The Spirit of Saint Louis* (1953), awarded the Pulitzer Prize for 1954.

LINDISFARNE See HOLY ISLAND.

LINDSAY, Sir David

of the Mount (1490-1555) Scot. poet. His poems satirise eccles. and polit. abuses of his day: *Ane Satyre of the Three Estaitis* (play) (1540), *Dialog betwixt Experience and Ane Courtour* (1552).

LINEN

Textile material made from the fibres of the flax plant, *Linum usitatissimum*. The flax fibres represent the hard part of the stem and are prepared by retting. The retted straw is broken or scutched in mills. By passing through hackling mills, the short fibres or tow are separated from the long fibres or line which are then spun into yarn for making linen. The chief seat of the industry is N. Ireland.

LINER

Large ocean-going passenger-carrying ship. In 1825 the steamship *Enterprise* reached India. Ships using steam made Atlantic crossings prior to the mid-19th cent. In 1840 Samuel Cunard founded the Cunard Line and there began a regular transatlantic service. In 1844 the iron-bull *Great Britain* demonstrated both the suitability of this metal for ship construction and the advantages of screw propulsion. Later came the development of the triple expansion engine, water tube boilers, twin screws and, at the turn of the cent., turbine machinery. By then steel had replaced iron in ship construction and experiments had begun with internal combustion engines and electric drive. The first express luxury liner was the White Star Liner *Oceanic* (c. 3,707 tons; speed 14.75 knots) running between Liverpool and New York. In 1893 the Cunard Line secured the Blue Riband of

the Atlantic with the *Campania* and *Lucania*, which had a gross tonnage of 12,950 and a speed of 22 k. The Cunard company's *Lusitania* and *Mauretania* were epoch-making ships. Built on the Clyde and Tyne respectively, and launched in 1907, their gross tonnage was c. 31,500, and direct coupled turbines driving quadruple screws gave a s.h.p. of 68,000 and a speed of 26.5 k. The *Lusitania* was torpedoed and sunk by a German submarine in 1915, and 1,198 persons lost their lives. The *Mauretania* won the Blue Riband in 1907 and held the honour for 22 years. At the end of World War I (1918) the general trend in designing was towards ships of moderate size and speed, e.g. the 5 Cunarders of the *Franconia* type which had a gross tonnage of 20,000 and a speed of 17 k. In 1926, the Compagnie Générale Transatlantique built the *Le de France* of 43,548 t., s.h.p. 52,000, speed 24 k. The climax of express passenger ships of huge dimensions was reached with the Cunard White Star Line *Queen Mary* and *Queen Elizabeth*. The former was ordered in Dec. 1930. She was launched by Queen Mary in 1934 and entered service in 1936. Of 81,237 t. gross, she is 1,019 ft long and is driven by geared turbines which give an av. speed of 28.5 k. She has accommodation for 704 first class, 751 cabin and 583 tourist passengers. In Aug. 1938 she made a record W. to E. Atlantic crossing, 2,938 m. in 3 days, 21 hrs. 48 min. at an av. speed of 30.99 k. The return trip was done at an av. speed of 31.69 k. During World War II she served as a troopship, carrying up to 10,500 men per voyage. Her sister ship was launched in 1938 and made a secret voyage to New York in 1940. For 5 years she too served as a troopship. Both ships are now employed on the Southampton-New York service. The fastest liner commissioned since the end of World War II, and the largest ever built in the U.S.A. is the U.S. Line *United States* employed on the New York Havre-Southampton service. Built in a graving dock, she was floated out in 1951 and sailed from New York on her maiden voyage on July 3rd, 1952. On her outward trip she covered the distance between Ambrose Light and Bishop Rock in 3 days, 10 hrs. 40 min. at an av. speed of 35.59 k., thus winning the Blue Riband of the Atlantic. She is 990 ft long, has a g.t. of 53,329 and is powered by 4 high pressure steam turbines developing 165,000 h.p. She carries 2,000 passengers and a crew of 1,000. Liners over 20,000 t. built since 1939 include: 1939: *America* (U.S.A.), 26,314 t., *Oranie* (Dutch), 20,166 t.; 1940: *Queen Elizabeth* (Brit.), 83,674 t.; 1952: *United States* (U.S.A.), 53,329 t.; 1961: *Canberra* (Brit.), 45,270 t., *France* (Fr.), 66,000 t.; 1963: *Michelangelo* and *Ruffalo* (Ital.), 43,000 t. A new Cunard liner of 58,000 t. is being built on the Clyde.

LING

(*Molva vulgaris*) Food-fish, of the cod family, ranging from Iceland to the Eng. Channel. Dark-grey, lighter beneath, 4.6 ft long, it is a ground-fish, trawled at 50-100 fathoms in the N. Sea, and line-fished in winter. Salted or dried as Lenten stockfish for C. and S. Europe.

LINLITHGOW

Burgh and county town of W. Lothian, 17 m. W. of Edinburgh. The palace was the birth-place of Mary, Queen of Scots. Pop. 4,562.

LINNAEUS, Carl

[lin-é-us] (1707-78) Swedish botanist. B. Råshult in Småland. In 1735 he gained his doctor's degree in Holland, but from 1741 until his d. he was Prof. of Botany at Uppsala. In his most famous works, the *Systema Naturae*, *Genera Plantarum* and *Bibliotheca Botanica*, Linnaeus laid the foundations of modern botanical nomenclature.

LINNET

Common Brit. resident songbird of finch family, *Carduelis cannabina*. Stout-billed, 5½ in. long, it is grey, brown or rose according to sex and season. It ranges Europe and W. Asia, wintering southward.

LINSEED

Ripened and dried flax seeds. From the cotyledons are expressed 10 % of a drying oil used for paint, varnish, linoleum, soap and printer's ink. The residual 60 % is pressed into oil-cake for cattle food. Argentina is the world's largest producer.

LINZ

[lins] Cap. of Upper Aust. on the Danube, 95 m. W. of Vienna. An old bridge town with routes running N. and S. across the Danube. Pop. 195,978.

LION

(*Felis leo*) Largest of the great cats, sometimes reaching 10 ft. overall, and surpassing 500 lb. The shaggy mane on the male's head and shoulders distinguishes it from other large Old World cats. Lions prey on Antelope, Zebra and other large mammals, also on cattle and pigs, man-eating is rare. They are found in Africa and parts of Asia, including India.

LIP

Name of fleshy structures above and below the mouth, covering teeth in man and many animals. **Lip Reading.** Interpretation of the speech of others by observing the movements of lips, tongue and facial expression. Mastery of this aid to hearing requires special instruction by experienced personnel over a period of 6 to 12 months. Of very little service in aiding deaf mutes. The Brit. Nat. Inst. for the Deaf recognises as one of its objects the re-educ. of partially deaf people through lip-reading. See DEAFNESS; HART-LIP.

LIPARI

[lî-pari] Group of Ital. Is. c. 20 m. off the N. coast of Sicily. Of volcanic origin, the largest are Lipari, Vulcano, Salina and Stromboli. Sulphur and pumice are produced. Pop. c. 25,000.

LIPPI, Fra Filippo

(1412-69) Ital. painter. B. Florence, he became a monk. Living at Padua, Florence, Prato, where he was chaplain in a convent, and elsewhere, he did some painting. His son, **Fra Filippino Lippi** (1460-1504) was equally famous as a painter.

LIQUEUR

[lik-kyoor] Potable spirit, usually sweetened with a distinctive flavouring. Well-known varieties include Kirsch and Maraschino, flavoured with cherries, Kummel, flavoured with caraway seeds, Benedictine and green or yellow Chartreuse utilise secret monastic recipes. Apricot, cherry, orange and peach brandy, and sloe gin, are prepared by steeping the fruits.

LIQUORICE

[lik-ôris] Brittle, blackish substance (*glycyrrhiza*). It comprises juice from the woody roots of a perennial Medit. leguminous herb. Both this stick liquorice and the peeled root serve as a mild laxative, sweetmeat and flavouring for medicines.

LISBON

[liz-] (*Port.* **Lisboa**) Cap. city and seaport of Portugal, on the estuary of the Tagus. Situated on low hills, it has a pleasant climate. Interest-

ing buildings include the cath., univ. (1911) and palace, and a marble aqueduct at Alcântara. L. has a fine harbour, and is the financial and distributing centre of the repub. with an important fishing industry. Pop. 1,397,213.

LISTER, Joseph

(1827-1912) A Quaker, b. at Upton House near Plaistow. In 1860 he was elected to the Chair of Surgery in Glasgow and began his work on sepsis, which culminated in the introduction of antiseptic surgery. Later he was elected to the Chair of Surgery in Edinburgh and in 1877 he became Prof. of Clinical Surgery at King's Coll. London. He was elected Pres. of the Royal Soc. (1865) and Pres. of the Brit. Assoc. (1866). He was one of the orig. members of the Order of Merit instituted at the coronation of King Edward VII.

LISZT, Franz

[list] (1811-86) Hungarian composer. In 1848 he became director of music to the Duke of Weimar. All his life he continued to teach and play in every part of Europe. He made many transcriptions for pianoforte as well as writing orig. works for the instrument. Other compositions include symphonic poems, a title he was the first to use, 2 symphonies, 2 piano concertos, choral works, songs and works for organ.

LITHIUM

A soft white element, the lightest known metal, discovered by Arfvedson in 1817. Sp. gr. 0.53. Chem. sym. Li.

LITHUANIA

Constituent repub. of the U.S.S.R. on the Baltic coast, bounded by Latvia, White Russ. and Poland. It is low-lying, with lakes and swamps. The main river is the Niemen. The chief industries are agriculture and forestry. Vilna (Vilnius) is the cap.; other large towns are Kaunas and Memel. L. became a grand duchy in the 14th cent.; in 1569 it was united with Poland, and divided between Russ. and Prussia in the 18th cent. In 1918 it became an indep. repub. but entered the U.S.S.R. in 1940. It was occupied by German forces during World War II, 1941-4. Area: 26,173 sq. m. Pop. 2,713,000.

LITMUS

Colouring matter obtained from various lichens, used as a chem. test for acids and alkalis, as the natural purplish blue colour is turned red by acids and restored by alkalis.

LITRE See TABLES, p. 451

LIVER

Biggest organ in body, wt. 50-60 ozs. It is situated under diaphragm on right side of abdomen and protected by ribs. Main storehouse and cleansing area in body. Rich blood supply from intestinal canal by portal circulation. This circulation carries all products of digestion. The liver stores substances such as glucose, renders harmless poisonous materials and prepares them for excretion. Bile and blood formation are also part of its functions. See BILE; JAUNDICE.

LIVER FLUKE

(*Fasciola*) A flat worm which is harmful to sheep and occasionally to horses, cattle and dogs. It causes serious disease called liver rot.

LIVERPOOL

City, county borough and seaport of Lancs. on the estuary of the Mersey. The city grew with the growth of the Amer. colonies and the importation of raw cotton. Now the main industry is shipping, with cotton the chief import. Other industries are the manufacture of cement and chemicals, flour milling, sugar refining and engineering. The univ. was founded 1803. L. returns 9 members to Parl. Pop. 745,230.

LIVERWORT

Flowerless plant of a class (*Hepaticae*) closely allied to mosses.

LIVINGSTONE

Town of Zambia, Africa, North of the Victoria Falls on the Zambezi. Named after the explorer, L. was the admin. cap. of N. Rhodesia until 1935.

LIVINGSTONE, David

(1813-73) Scots missionary and traveller. B. Low Blantyre, Lanarkshire. In 1840, under the auspices of the London Missionary Soc. he went to Bechuanaland, S. Africa. In 1849 Livingstone began his explorations. He travelled down the Zambezi, discovered the Victoria Falls, Nyasa and other lakes. In 1871, he was rescued at Ujiji by Stanley. He d. at Ilala.

LIVY

(59 B.C.-A.D. 17) Rom. historian, b. in Padua. His *History of Rome* was in 142 books, and the 35 books extant cover the period from the founding of the city (753 B.C.) until 9 B.C.

LIZARD, The

Most S. point of Eng. in Cornwall, 10 m. S.E. of Helston.

LIZARD

Reptiles belonging to the suborder Lacertilia, found in all temp. and trop. regions. They differ from snakes by having normally 4 limbs, movable eyelids, and united mandibles. The 1,700 species are carnivorous or herbivorous, mostly terrestrial and arboreal, producing either eggs or living young. The Gila monster is the only venomous form. Geckos, chameleons and true lizards form suborders. Of Brit.'s 4 species, the common *Lacerta vivipara*, 7 in. long, and the snake-like Blindworm produce living young; the Sand-lizard, 9 in., is egg-laying.

LLAMA

[la'-l] S. Amer. 2-toed ruminant. Related to Old World camels, but smaller, humpless and woolly-haired. 2 breeds.—*Llama glama* Pie-Columbian Amer. domesticated, now unknown in the wild state, and *L. pacos* the Alpaca.

LLANBERIS

[hlan-ber'-is] Village of Caernarvonshire, 9 m E. of Caernarvon, near the foot of Snowdon The Pass of L. rises to over 1,100 ft.

LLANDAFF

[lan'-l] Cath. city of Glamorgan, in the county borough of Cardiff, on the Taff.

LLANDUDNO

[hlan-did'-no] Resort and urban district on the N. coast of Caernarvon, where the Conway flows into the sea. Pop. 17,170.

LLEWELLYN

[loo-el'-in] Name of several Welsh princes. Llewellyn the Great (1194-1239) was constantly at war with King John and his son, Henry III. His grandson was the Prince Llewellyn II who fought against Edward I. He was beaten and made prisoner, 1276, but later released.

LLOYD GEORGE, David

(1863-1945) Earl L.G. of Dwyfor. Welsh statesman. M.P. (Lib.) 1890-1945; Chanc. of Exchequer, 1908-15; Munitions Min. 1915-16; War Sec. 1916; P.M. 1916-22; Earl, 1945. His 1909 budget led to the quarrel with the Lords and to the Parl. Act. He was a supporter of the declaration of war on Germany, but in 1916, dissatisfied with the conduct of the war, resigned and brought Asquith's coalition to an end. He became Premier in a new coalition, which prosecuted the war vigorously, and also negotiated the peace settlement of 1919. He was confirmed in power by an election in 1919, but the withdrawal of the Cons. in 1922 broke up his coalition and left him without a party. Thereafter, Lloyd George was never again in power. His son Gwilym (1894-) was a Lib. M.P. 1922-4, 1929-50; Lib.-Cons. M.P. 1951-7; Min. of Food from 1951-4. He was Min. for Welsh Affairs, 1954-7. His daughter Lady

Megan (1904-66) was a Lib. M.P. 1929-51; deputy leader of Lib. Party, 1949-51; joined Lib. Party in 1955. Lib. M.P. for Carmarthen from 1957.

LLOYDS

An assoc. of underwriters covering marine risks. They distribute shipping intelligence through Lloyds List which is the second oldest paper in Europe. The name is derived from the coffee house kept by Edward Lloyd in the 17th cent.

LOACH

(*Nemachilus barbatulus*) Small fresh water fish of the carp family, which frequents clear shallow streams. It occurs in Eng. and S. Scot. and elsewhere in Europe. There are six barbel on the upper jaw. The spined loach or groundling (*Cobitis taenia*) is found in Eng.

LOAD LINE

Plimsoll mark placed amidships on the sides of a vessel to show the limit to which loading may be carried. See PLIMSOLL.

LOANDA, S. Paulo de

[lô-an'-l] or Luanda Cap. and seaport of Angola (Portuguese W. Africa). Pop. 40,000.

LOBELIA

Large genus of perennial and annual plants, mostly herbs, allied to the Campanulaceae, natives of temp. and warmer regions. The dwarf, *L. erinus*, came from S. Africa.

LOBSTER

Large edible marine crustacean. The head and thorax encased in a skeletal unit. Foremost pair of limbs in the thoracic region developed as pincer-like claws. The common *Homarus*, deep blue in colour when living, bright red after boiling, averages 8-12 lb.; the Amer. var. sometimes reaches 20-23 lb. The larger clawless rock-l or crawfish, *Palinurus vulgaris*, has a spiny carapace. The smaller Norway-l, *Nephrops norvegicus*, has slender pincers

**LOBWORM**

Free-living marine segmented worms found in seashore mud and sand. The common European *Arenicola marina* is a favourite angler's bait.

LOCARNO

Town of Switzerland, on the N. shore of L. Maggiore. Locarno Pact. 7 conventions concluded in 1925 by Czechoslovakia, Poland, Germany, Fr., Brit., Belg. and Italy. In the major treaty, the powers individually and collectively guaranteed the common boundaries of Germany, Belgium and Fr. as determined by the Treaty of Versailles; a section of the Rhineland was demilitarised, and these countries agreed not to resort to war against each other unless (1) in self-defence, (2) in the event of a violation of the demilitarisation formula, (3) as a result of action by the League of Nations. The signatories also bound themselves to aid the defending power in case of aggression by another state violating the Pact.

LOCH

Term applied to lakes in mountainous districts and to ford-like inlets of the sea on the coast

of Scot. By submergence of the lower reaches of the valley the loch may become an inlet of the sea.

LOCKE, John (1632-1704) Eng. philosopher. B. Wrington, Somerset. He was a Commissioner of the Board of Trade, 1696-1700, when he retired. Locke's philosophical ideas are set out in his *Essay Concerning the Human Understanding*. In this he argues that all our knowledge is the result of experience; our beliefs in good or evil arise largely from the assoc. of ideas. In *On Civil Government* he developed the principle that sovereignty depends upon contract.

LOCKJAW

Popular name for TETANUS (q.v.).

LOCOMOTIVES

The steam locomotive has served the world's rlys. for 130 years but is now being replaced by electric and diesel traction. By 1965 the majority of Brit.'s main line trains were hauled by diesel or electric locos. It was in Brit. that the steam loco was first developed. The first public rly. in the world, opened betw. Stockton and Darlington in 1825, was first operated by a Geo. Stephenson loco. As early as 1904 a G.W.R. loco, the 4-4-0 'City of Truro', reached 102.3 m.p.h. near Taunton. In 1937, a streamlined Gresley loco, 'Coronation', hauling the 'Coronation Scot' train between Glasgow and London, attained 114 m.p.h. near Crewe and averaged nearly 80 m.p.h. over the 185 m. between Crewe and Euston. On July 3, 1938, the L.N.E.R. A1 'Mallard' was taken up to a max. of 126 m.p.h. for 5 consecutive miles between Peterborough and Grantham, setting an unbroken world record for steam locos. When the rlys. of Gt. Brit. were nationalised after World War II over 400 loco designs were replaced by 11, the largest of which were the 'Britannia' 4-6-2 and the Heavy Freight 2-10-0. Steam locos are generally classed by their wheel arrangements. Thus a loco with a leading four-wheeled bogie, six-coupled driving wheels, and no carrying wheels at the trailing end is a 4-6-0. Among the best known types are Pacific 4-6-2, Atlantic 4-4-2, Mogul 2-6-0; Prairie 2-6-2, Consolidation 2-8-0, Baltic 4-6-4, and Beyer-Garratt 2-6-0+0-6-2. An electric loco is a power unit receiving its power either from a third rail or from overhead wires. Diesel train traction usually depends on the use of diesel engines to drive dynamos which make electric current for electric motors which drive the axles as on an electric train. Electric traction on rlys. began towards the end of the 19th cent. Its advantages over steam traction include more rapid acceleration and the elimination of smoke. Many European countries which have steep gradients and cheap hydro-electric power available have built large networks of electric rlys. There are now more than 1,000 daily runs in Fr. at over 62 m.p.h. In March, 1955, 2 Fr. electric locos both attained a max. speed of 205.6 m.p.h. for a new world rail speed record. The luxurious Ital. 'Settebello' runs from Rome to Milan, 393 m., at an av. speed of 67.5 m.p.h. The fastest electric train of all is that from Tokyo to Osaka where electric 'bullet trains' maintain a 100 m.p.h. schedule. By 1967 3,300 h.p. electric locos were hauling the principal expresses between Liverpool, Manchester, the Midlands and London at up to 100 m.p.h. and, as in other highly populated countries, Brit. has made use of electrification on busy suburban lines. On less heavily-trafficked lines, Gt. Brit. has replaced steam traction by diesel. The diesel 'blue riband' in Brit. is held by the 3,300 h.p. 'Deltic' diesel-electric locos which haul the principal expresses on E. coast routes between London and Edinburgh, maintaining a 6-hour schedule over 393 m. Multiple-unit diesel trains are widely used on suburban and

inter-city services. In Amer. diesel traction is used on a large scale. As early as 1935, the 'Comet', a streamlined diesel-electric train of the New York, New Haven and Hartford Railroad, exceeded 110 m.p.h. and a 6-car streamlined aluminium diesel-electric train covered the 3,259 m. between Los Angeles and New York in 56 hours, cutting the steam record by over 17 hours. On many of today's long-distance diesel and electric trains, the rlys. are considering the attraction of airliner speeds with comfort and luxury impossible in the air with lounges, bars, restaurants, domed compartments for better visibility and a wide variety of sleeper accommodation.

LOCUST

Name used for several kinds of large short-horned grasshoppers that in a certain phase of their life become gregarious and migrate in large swarms. Among the best known are the African migratory *Locusta migratoria*, the Desert Locust *Schistocerca gregaria* of Africa and Asia, and various species of *Melanoplus* in N. Amer. The adults may carry out a migratory flight of many hundreds of miles, usually in dense clouds. Both the hoppers and the adults are extremely destructive to crops of many kinds. Locust control is one of the most important aspects of economic entomology.

LOCUST BEAN

Pod of the carob tree, grown in Asia Minor and Italy, remarkable for the large proportion of sugar it contains.

LODGE, Sir Oliver Joseph

F.R.S. (1851-1940) Eng. scientist. B. Penkhull, Staffs. As a physicist Lodge was among the first to demonstrate the possibility of wireless communication. Later he gave much attention to the phenomena of spiritualism. His books include *Modern Views of Electricity, Ether and Reality* and *Reincarnation*.

LODGE, Thomas

(c. 1558-1625) Eng. writer of romances (e.g. *Rosalind* 1593), on which Shakespeare based *As You Like It*.

LOESS

[lō-'es] Yellowish fine-grained, sandy and calcareous loam. It covers large areas in C. and S.E. Europe and China. In the Rhine Valley the deposits are of fluvial origin, but those in N. China appear to be due to the action of wind.

LOFOTEN

[lō-fō-'ten, lōo-footen] Group of Is. off the N.W. coast of Norway. The chief occupation is cod-fishing.

LOGANBERRY

Hard, prickly shrub of the Rosaceae. Derived from the European raspberry and a Calif. blackberry, it was hybridised by Judge Logan, 1881.

LOGARITHMS

(Gk. *Account-number*) Mathematical tabular system invented and compiled in 1614 by the Scot. mathematician John Napier. Logarithms simplify complex arithmetical computations. Thus the operations of multiplication, division, involution or the finding of roots, are changed to those of addition, subtraction, multiplication and division respectively. Logarithms are of 2 kinds. *Common* (which have a base of 10) for general use, and *Napierian* (which have a base denoted by small *e*).

LOGIC

Science of reasoning, or the science of the laws of thought. The earliest and most influential system was that laid down by Aristotle in his *Organon*. The study was revived by Abelard and other early scholars and logic has been taught in the univs. since their day. A new direction was given to it by the *Novum Organum* of Francis Bacon.

LOIRE

[lwar] The longest river of Fr., rising in the Cévennes and flowing past Orléans, Blois, Tours and Nantes to the Atlantic at St. Nazaire. Over 600 m long, it is famous for the châteaux on its banks.

LOLLARDS

Followers of John Wycliffe. They arose towards the end of the 14th cent., objected to prayers for the dead, celibacy and other ch. ordinances, attacked the wealth and indolence of the clergy and became a polit. party. During the reigns of Richard II and of Henry IV, they were persecuted and some put to d.

LOMBARDS

People of Europe. Their first home was in Germany, but c. 470, they conquered much of Italy including the district still called Lombardy. They formed an indep. kingdom, their kings wearing the famous iron crown.

LOMBARDY

Region of N. Italy. It contains lakes Garda, Como, Maggiore and Iseo, and the rivers Po, Oglio and Adda. A fertile area, L. produces flax, wheat, sugar beet and wine. Milan, Bergamo and Cremona are the chief towns. Lombardy Poplar (*Populus italica*) Tall ornamental tree of the willow family. Inhabiting Persia and N.W. India from remote ages, reaching 100-150 ft., Lombardy apparently received it in post-classical times.

LOMOND

[lōm] Largest loch of Scot. in Stirling and Dunbartonshire, overlooked by Ben L., 3,192 ft.

LONDON

Cap. of Eng. and of the Brit. Commonwealth of Nations, a seaport and a financial, manufacturing and trading centre. LOUIS

(lū-ē) Name of 3 kings of Bavaria, also known as Ludwig. Louis II (1845-86) became king in 1864. Interested in art and music, he neglected affairs of state. He was the patron of Wagner. Later his mind gave way, and in 1886 a regent was apptd. Louis III (1845-1921) a son of the regent, Luitpold, succeeded his father as regent for the insane king Otto (1912), and in 1913 became king. Compelled to abdicate in 1918.

LOUIS

Name of 18 kings of Fr. The first 5 were de-

scendants of Charlemagne. Louis VII, of the Capet family, reigned 1137-80. He was the rival of Henry II of Eng., who mar. his divorced wife, Eleanor of Aquitaine. Louis IX (1214-70) called St. Louis. He was a son of Louis VIII and Blanche of Castile. In 1226 he became king. When he came of age he went to war with Henry III of Eng. From 1248-54 he was absent on a crusade. In the next 16 years he won his reputation as a law giver and a saint, having estab. the Sorbonne Univ. in Paris, issued a new code of laws and set up courts of justice. He was canonised in 1290. Louis XI (1423-83) Son of Charles VII, he became king in 1461 and reigned for 22 years. At home he made the crown stronger and the nobles weaker; abroad he was occupied with wars and intrigues with Charles the Bold and Edward IV of Eng. In 1468 he was taken prisoner by Charles, but released 3 days later. Louis has won fame as one of the craftiest of kings. Louis XII (1462-1515) Son of Charles, Duke of Orléans. He mar. a daughter of Louis XI, and took some part in politics and in war, being later recognised as heir to the childless king Charles VIII, whom he succeeded in 1498. Louis reigned for 16 years, some of which were spent warring in Italy. Louis mar., as his 2nd wife, Anne, Duchess of Brittany, and as his 3rd, Mary, daughter of Henry VII of Eng. He left no sons, and his successor was Francis I. Louis XIII (1601-43) A son of Henry IV and Mary de Medici, he became king at the age of 9. His mother acted as regent. In his personal reign of over 25 years he was overshadowed by his min. Richelieu, who took office in 1624 and directed the affairs of state. Risings of the Huguenots were put down firmly. Later, Fr. went to the help of the Protestants in the Thirty Years' War. Louis mar. Anne, daughter of Philip III of Spain. Their sons were Louis XIV and Philip, Duke of Orléans. Louis XIV (1638-1715) A son of Louis XIII and Anne of Austria, he came to the throne in 1643. In his long reign of 72 years he exercised enormous influence upon politics, art, lit and fashion. During the earlier part of his reign he greatly extended the area of Fr. He surrounded himself with pomp and was called 'le roi soleil' and 'le grand monarque'. He built Versailles. Louis mar. Maria Theresa, a Spanish Princess, and after her d., Madame de Maintenon. He was succeeded by his great-grandson Louis XV. Louis XV (1710-74) Son of Louis, Duke of Burgundy, who was a grandson of Louis XIV. For much of his reign Fr. was at war with Brit. and other European powers. The king exercised little influence on affairs of state; and inefficiency of the governmental machinery, plus reckless extravagance and the expense of wars, brought Fr. to the verge of bankruptcy and revolution. He had many mistresses, notably Madame de Pompadour. Louis XVI (1754-93) B. Versailles, he was a son of the dauphin Louis who d. in 1765. In 1774 he succeeded his grandfather as king, having 4 years before mar. Marie Antoinette, a member of the great Hapsburg family. In 1789 the revolution began. In June, 1791, he escaped from Paris to Varennes, but was captured and brought back. Until Sept. 1792, he reigned as a constitutional king, but the office was then abolished and Louis was tried, condemned and guillotined as Louis Capet. The king left a son, known as Louis XVII, and a daughter. Louis XVII (1785-c. '95) King of Fr. in name only. A son of Louis XVI. He was put in prison with the other members of the royal family. He was alleged to have d. in the Temple, Paris, then a prison, June 8, 1795. Several pretenders came forward, claiming to be the dauphin. Louis XVIII (1755-1824) A brother of Louis XVI. In 1795, when the prince, nominally Louis XVII, d. he proclaimed himself king. In 1814 as the head of the Bourbons he was recalled to Fr. and became king, but was soon forced to flee; in 1815 he

(1483-1546) German reformer. In 1508 he went to Wittenberg as a lecturer at the univ. He had worked out a doctrine of salvation, different from that taught by the ch. and in 1517 he became a national figure. He challenged John Tetzel, a friar who was selling indulgences, to a discussion and drew up 95 theses as a basis for the debate. These he fixed on a ch. door at Wittenberg on Oct. 31, 1517, an event which is usually regarded as marking the opening of the Reformation. His action created violent controversy in Germany, and he soon had a considerable following. In 1520 the Pope issued a bull condemning his views, but this was publicly burned by the reformer at Wittenberg and his breach with the ch. was complete. To save him from violence he was carried off to a fortress, the Wartburg, and there he lived under the protection of the Elector of Saxony. Much of his later life was passed in organising the Reformed Ch. in Germany. He trans. the Bible and wrote hymns. **Lutheranism.** Form of religion founded by Martin Luther. MENTAL HOSPITALS

Formerly known as lunatic asylums, the mental hospitals of today are evolving into true hospitals. Doctors and nurses are specially trained. Consultant specialists are attached to the staffs. Much attention is devoted to cultural and occupational amenities with a view to rehabilitating patients. The majority of sufferers from mental disease enter the hospitals in the voluntary category. At least two-thirds of patients admitted to mental hospitals are able to be discharged. Entrance to a mental hospital is obtained either by direct presentation of the patient at the hospital, or by recommendation of the patient's doctor or from a Nerve Clinic. Under the *Mental Treatment Act, 1930*, patients may be admitted in the 'temporary category' if they are neither willing nor unwilling to receive treatment. This procedure requires two doctors' certificates and the patient may remain in hospital for six months. Amendments to the Act were introduced, 1959 and 1960.

MENTHOL

White crystalline substance from *Mentha arvensis* or *piperascens* and *glabra*, growing in Japan and China. It is used as a local anaesthetic.

MENUHIN, Yehudi

[mēn-'yew-in] (1916-) Violinist. B. New York of Jewish parents. He is regarded as one of the world's leading players. K.B.E. (Hon.) 1965.

MENZIES, Sir Robert Gordon

MESSINA

City and seaport of N.E. Sicily, 55 m. N.E. of Catania on the Strait of M. Pop. 251,423.

METAL

Larger of the 2 groups of chemical elements. Iron and aluminium in the form of oxides and silicates, with calcium and magnesium as carbonates, form a considerable portion of rocks, while sodium and potassium compounds are abundant in sea-water and certain deposits. The characteristic physical properties of metals are their lustre and opacity, density, malleability, ductility and fusibility. **Metal Fatigue.** Structural change brought about in metal by repeated applications of stress. In light alloys, cyclic application of even very small stresses is liable to result in eventual failure. Steels and certain other metals have a 'fatigue limit' of stress below which any number of reversals can be sustained. Fatigue did not involve critical engineering problems until post-war civil aircraft began to use new alloys. Fatigue in light alloy structures cannot be abolished, and the designer's aim is to prevent its occurrence within the required life of the aircraft.

METAXAS, Yanni

(1870-1941) Gk. soldier and politician. Chief of the Gen. Staff, 1913-16. He assumed autocratic powers in 1936, and until his d. led the govt., refusing to accept the Ital. ultimatum of 1940.

METEOROLOGY

Science dealing with the study of atmospheric conditions in relation to the weather and climate. It is based upon regular and systematic observations. Uniformity in recording these necessitates a central office where deductions are made and charts drawn up, enabling weather forecasts to be made. See WEATHER FORECAST.

METHANE

CH₄. Simplest of the paraffin series of hydrocarbons, known also as marsh gas or fire-damp. It is a colourless, odourless gas, which burns with a faintly luminous flame. Methane is a constituent of coal gas and is given off from decaying vegetable matter.

METHODISM

Religious communions arising from the 18th cent. evangelical revival. John Wesley began evangelistic work in London, 1739, instituted lay-preaching, 1741, and in 1744 held a conference of his followers. Wesley and his helpers took up open-air preaching, and the movement spread. Immigrant local preachers of N. Amer. from 1760, developed a movement resulting in a conference in Philadelphia, 1773. Coke's adoption of the title 'bishop' started the

Amer. Methodist Episcopal Ch. An Enabling Act, 1930, empowered the Wesleyan, Primitive and United Methodist Chs. to combine as the Methodist Ch. 1933.

METHYL

CH₃. Organic radicle or group of atoms which does not exist alone, but has many derivatives.

METHYL ALCOHOL

CH₃OH. Simplest of the alcohol series of organic compounds. In its commercial form it is known as wood spirit; it may also be made directly by interaction of hydrogen and carbon monoxide in the presence of catalysts. Methylated Spirit. Form of industrial spirit. It consists of a mixture of rectified spirit and wood naphtha or methyl alcohol with pyridine or petroleum.

METRIC SYSTEM

Weights and measures system having a decimal scale of numeration and based upon the metre as the unit. See p. 451

METTERNICH, Prince Clemens Lothar Wenzel (1773-1859) Austrian diplomat and statesman. He negotiated the mar. of Napoleon and Marie Louise. In 1814 he took a prominent part in the Congress of Vienna, and from 1815 was the most influential European diplomat, advocating suppression of all popular constitutional movements.

METZ

Cap. of Moselle dept. N.E. Fr. on the Moselle R. It was taken by the Germans in 1870, and made cap. of Lorraine. The Fr. recovered it in 1919. Pop. 109,678.

MEUSE

[mòs] Dept. of N.E. Fr. bounded by Belg. Cap. Bar-le-Duc. The River M. rises near Langres, flows N. past Verdun to Givet, where it enters Belg., and then past Liège into the Netherlands. The Dutch name is Maas.

MEXICO

Fed. repub. of C. Amer., S. of the U.S.A. and N. of Guatemala and Brit. Honduras. The greater part consists of a high plateau, with an average altitude of 6,000 ft., flanked by 2 cordillera. Pica de Orizaba (18,000 ft.), and Popocatepetl (17,880 ft.) are the highest mts. There are numerous lakes, the largest being Chapala. There is a great range of climate, and 3 types may be defined trop. in Yucatan and the low-lying areas, temp. on the plateau, and cold above 6,000 ft. Agriculture is the chief industry. Coffee, tobacco, cotton, maize, wheat, and cold above 6,000 ft. Agriculture is the chief industry. Coffee, tobacco, cotton, maize, wheat, copper, zinc and vanadium are produced. Industries are mainly dependent on hydro-electricity. M. City is the cap.; other important towns are Guadalajara, Monterrey, Merida, León, Tampico and Vera Cruz. Sp. is the official language, and R.C. the predominant religion. M. was annexed by the Sp. in the 16th cent. when Cortes conquered the Aztecs. A repub. was set up, 1824, and Texas separated from M. 1837. Following the 1846-8 war, Calif. and New Mexico were given to the U.S.A. The Aust. [mí-am'-i] City of S. Florida, at the mouth of

the M. river, and on Biscayne Bay. A popular pleasure resort. Pop. 292,000.

MICA

Group of mineral silicates of aluminium and potassium, sodium, lithium, or iron and magnesium, characterised by a pearly lustre and cleavage into thin elastic sheets. The colourless varieties are used for lamp chimneys and stove doors.

MICAH

(O.T.) Minor Heb. prophet. Writings denounce oppression and pray for a religion of justice and mercy.

MICHAEL

(1921-) King of Rumania, son of Carol II (q.v.). He was recognised as heir apparent when Carol renounced his rights in 1925. Carol returned and was recognised as king in 1930. In 1940 Carol once more left Rumania and Michael became king. The Communists forced him to abdicate, Mar. 1948.

MICHELANGELO

(Michelangelo Buonarroti) (1475-1564) Ital. painter, sculptor, architect and poet. He worked under the patronage of Lorenzo de Medici and Popes Alexander VI, and Julius II. His verse ranks high in Ital. poetry.

MICHIGAN

[mish'-i] N. State of the U.S.A., 2 peninsulas between Lakes Superior, Michigan and Huron. Once an agricultural state, M. is now predominantly industrial. Coal, petroleum, iron ore, cement and gypsum are produced and there are forests. Lansing is the cap. although Detroit, Grand Rapids, Flint and Saginaw are larger. First settled, 1668, and became a state, 1837; it sends 19 representatives to Congress. Area: 96,720 sq.m. including 39,700 sq.m. inland water. Pop. 8,116,000. Michigan, Lake. One of the Gt. Lakes, lying wholly within the U.S.A. Chicago and Milwaukee are lakeside cities. Area: 22,400 sq.m.

MICRONESIA

One of the 3 divisions of Oceania, N.E. of New Guinea. It comprises the Caroline, Marshall, Gilbert and Mariana groups.

MICROPHONE

Device for converting sound vibrations into electric currents. In the moving coil microphone, a small coil, attached to a paper or metal cone, is caused by the sound to move in the field of a permanent magnet.

MICROSCOPE

Optical instrument used for examining minute objects by magnification. Electron microscope. An instrument in which electrons and electro-magnetic fields replace light rays and glass lenses. It is much more powerful than the optical microscope. Ion Microscope. The pictures are formed by atoms of helium gas which have lost an electron (i.e. have become ionised) through proximity to the electrode.

MILWAUKEE

[-waw'-] City and port of Wisconsin, U.S.A. on the W. shore of L. Michigan, 85 m. N. of Chicago. Industries include steel manufacture, flour milling and tanning. Pop. 741,000.

MIMOSA

Large genus of leguminous plants, natives of the warmer regions of Africa, Asia and Amer. The leaves are in many species sensitive, closing with touch, e.g. the Brazilian *M. pudica*.

MIMULUS

Cultivated variety of musk (*Mimulus moschatus*) of the Scrophulariaceae.

MIND

The brain is the essential organ of mind. As the chief focus of the nervous system, the brain, with its vast number of cells closely interlinked, is related to all the tissues and organs of the body by means of nerves. The reception by the brain cells of messages from the various sense organs arouses what is called *sensation*, and consciousness, from a physiological point of view, is simply awareness of sensation. All mind functioning is therefore primarily dependent on sensation and sensation is dependent on efficient sense organs and healthy nerves to transmit impulses when these sense organs are stimulated. In turn, consciousness depends upon the integrity of the brain cells and should these cells be injured, as in concussion from a blow or damaged by the poisons of alcohol or disease, then consciousness may be reduced or completely suspended. All forms of mental activity use up energy in the nerve cells and this need is met with by an increased flow of blood containing nutriment to the brain.

MINDANAO

Second largest Is. in the Repub. of the Philippines (q.v.) in the S. of the group. Zamboanga is the chief town. Area: 36,540 sq.m.

MINING

MUSIC

Music is the art or science of arranging sounds in melodies and rhythms to give a desired pattern or effect. It is thought that the music of the Christian Ch., in which much W. music has its origins, was derived from Gk. and Heb. At the beginning the M.A. the introduction of organum or diaphony, and later descant, was accompanied by a system of notation by *neumes*. While the W. was progressing along polyphonic and harmonic lines, E. musicians explored the subtleties of melody and rhythm. The end of the M.A. was marked in Europe by the evolution of notation into its modern form. Choral music reached its peak at the end of the

16th century at the same time as opera emerged and the equivalent of an orchestra. Oratorios, concertos, and operatic overtures paved the way for symphonic compositions. Since the beginning of the 19th cent., every great composer has added to orchestral resources. Chamber music and lieder provide an important contrast to the symphony. Folk song has made many contributions to serious music, and in our own day ragtime and jazz music owe their origin to negro folk rhythms.

NEW ZEALAND

The Dominion of N.Z. lies 1,200 m. south-east of Australia and 5,000 m. W. of S. Amer. A little smaller (104,000 sq.m.) than the Brit. Is. it supports a pop. of about 2½ million. It administers certain W. Pacific Is. and Ross Dependency in Antarctica. The principal parts of the Dominion are the N. and S. Is. of N.Z. extending between latitudes 34° and 48° S.; about 1,000 m. in a N.E.-S.W. direction but less than 300 m. wide. The Is. are mountainous, particularly S. Is., where Mt. Cook reaches 12,349 ft. North Is. has plains around Hauraki Gulf, where Auckland, the largest city, is situated, and in the S.W. and S.E.; S. Is. has the Canterbury Plains in the E. There are many areas of hill country (1-2,000 ft.) formerly forested but now important for grazing. In N. Is. there are active volcanoes and hot springs. Climatically there is a general likeness between New Zealand and the Brit. Is. The prevailing winds are W. at all seasons and bring heavy precipitation to the W. coast and mts., especially in S. Is. Over a thousand plants are peculiar to N.Z. Tree ferns up to 50 ft. in height are abundant. The evergreen sub-trop. rain forest, characteristic below 4,000 ft., has been largely cleared for agriculture. History. First discovered in 1642 by Tasman, the coast was explored by Capt. Cook in 1769, 1773, 1774 and 1777. Sealers and whalers, chiefly from Australia, were the first Europeans to settle, and a timber trade developed. In 1840, the sovereignty of Queen Victoria was proclaimed. In that year the N.Z. Islands' first permanent settlement, Wellington, was founded. The Free Ch. of Scot. sponsored that at Dunedin (S. Is.) in 1848 and the Ch. of Eng. the Canterbury settlement in 1850; in 1907 the Dominion of N.Z. was establd. After the Maori Wars in 1845-6 and 1860-70 the natives settled peacefully and now take an increasing part in life and govt. In the present cent. their numbers have more than doubled and there are now 170,000 mainly in N. Is. There is no colour bar. About two-thirds of the farm products are exported and these represent over 90 % of the total exports.

Before refrigeration N.Z. could put only non-perishable commodities on the world market—wool, wheat, and some flax—but meat and dairy produce are more profitable. Adequate moisture with mild temperatures all year round favour grass. About 18 million acres of native forest have been cleared and replaced by grass, in addition to which there are about 14 million acres of native tussock grass. Type of farming varies with altitude and soil: generally, the moister lowlands are dairying areas, particularly in N. Is., and the drier areas and uplands carry sheep. Small, intensively and scientifically worked farms are characteristic. Marketing is also well organised. Gold was once important but the annual value of production is now less than £1 m. Coal is mined. With a pop. of only 2½ million the home market for manufactured goods is small. The processing and manufacture of meat, butter and cheese accounts for much of the industry, but more and more consumer goods, for home use, are made. Coal is the chief source of power but hydro-electric power is being developed. Clothing, footwear, motor car bodies, electrical equipment, farm machinery and fertilisers are produced and there is a substantial saw-milling industry. N.Z. is a self-governing dominion; the Gov.-Gen. is apptd. by the Crown. The House of Representatives is elected by all adults; the Maori pop. (having a separate electoral roll) has 4 members of a total of 80. N.Z. has been a pioneer of social legislation. Social services are well organised. Educ. is compulsory and free. The Univ. of New Zealand consisted of Univ. Colls. at Auckland, Wellington, Christchurch and the Univ. of Otago, now separate univs.

troops made landings behind the German defences in Normandy. On June 6 (D-Day) Allied naval forces supported by strong air forces began landing Allied armies between Cherbourg and Le Havre. •

NORSE

The N. Germanic or Scandinavian language, esp. Old Norse (c. 700-1530). The Vikings carried it to Iceland (where sagas were composed c. 1000-1300; see EDDA) to Greenland, the Faroes, Caithness, Sutherland, Orkney and Shetland, to Normandy, to Ireland, and to N. Eng.

NORTH, Lord

Frederick (1732-92) Brit. politician. He entered parl. in 1754, becoming Chanc. of the Exchequer, 1767, and P.M. 1770-82. He is best known as the leader of the admin. during the Amer. War of Indep.

NORTH AFRICA, War in

When Italy entered World War II (June 10, 1940), N. Africa became an active theatre of war, in which the aims of both sides were (1) control of the Suez Canal and (2) control of the Medit. The great desert war began in Aug. 1940, and was waged along the whole coast of Libya and Egypt. After reverses in 1942 Gen. Montgomery launched a powerful attack on the Germans under Rommel. Tripoli was captured by the Brit. (Jan. 23, 1943). On Nov. 7-8, 1942, a large-scale amphibious force under Gen. Eisenhower (q.v.) made a landing at Algiers, Oran and Casablanca and moved rapidly towards Tunis. The Germans were now encircled. On May 7 the Germans took Bizerta and the Brit. occupied Tunis. 5 days later the Axis forces in N. Africa capitulated.

NORTH AMERICA

Termin applied to the whole of the N. of the Amer. cont. including the U.S.A., Canada and Mexico. The chief physical features are the Laurentian Plateau in the N. of Canada, the hilly Appalachian area from Newfoundland to Alabama, the W. highlands which include the Rocky Mts. and the vast central plains or prairies. Important rivers are the Mississippi, St. Lawrence, Mackenzie, Columbia, Colorado and Hudson. Gold is plentiful in many districts, oil, coal, iron, uranium and most of the essential minerals are found. Fur-bearing animals are a source of considerable wealth, and large stretches of country have rich agricultural land. The orig. inhabitants were the Amer.-Ind. of different tribes. The hist. of the cont. starts with its discovery by Columbus, 1492, though earlier voyagers had sighted parts of it, and there had been European settlers in Greenland. From the 17th cent. there have been many immigrants, predominantly European. Area: c. 8,000,000 sq.m. Pop. c. 233,000,000.

NORTH CAROLINA

S. state of the U.S.A. with an Atlantic coastline. The W. contains the ranges of the Appalachian Mts. but the E. is low-lying. The chief agricultural products are maize, cotton, tobacco, peanuts and sweet potatoes. Raleigh is the cap. N.C. was settled, 1653, and was 1 of the orig. 13 states. It sends 11 representatives to Congress. Area: 52,712 sq.m. Pop. 4,713,000.

NORTH DAKOTA

[n-kô'] N. state of the U.S.A., S. of the Canadian border in the Great Plains. Agriculture is the chief occupation, with large-scale farms. Horses and cattle are reared. Bismarck is the cap. but Fargo, Grand Forks and Minot are larger. Settled c. 1800. N.D. became a state, 1889, and sends 2 representatives to Congress. Area: 70,660 sq.m. Pop. 642,000.

NORTH ISLAND

More N. of the 2 chief Is. of New Zealand (q.v.). It is famous for its sheep and cattle. The principal cities are Auckland and Wellington. Area: 44,280 sq.m. Pop. c. 1,820,118.

NORTH POLE

N. terminus of the axis of the earth. See ARCTIC. •

NORTH RHINE-WESTPHALIA

State of W. Germany, bounded on the N.W. by the Netherlands. It is traversed by the Rhine, and contains the great industrial area of the Ruhr. Düsseldorf is the cap. Pop. 15,901,700.

NORTH RIDING

One of the 3 admin. divisions of Yorks. (q.v.) constituting a separate county; chief town, Northallerton. It returns 6 members to Parl. (2 borough constituencies). Pop. 565,080.

NORTH SEA

Sea bounded by the coasts of Brit., Norway, Denmark, Germany and the Netherlands, with the Arctic Sea and Strait of Dover to N. and S. It is shallow, averaging c. 60 fathoms, and slopes from N. to S. One of the most important fishing grounds in the world.

NORTH-WEST PASSAGE

Route from the Atlantic to the Pacific round the N. of Canada. In 1714 Parl. offered a reward of £20,000 to the first discoverer of the passage. There were many attempts, including that of Sir J. Franklin in 1845. It was navigated by Amundsen in 1903-5. A regular trans-polar air route began operating Mar. 1957.

NORTHWEST TERRITORIES

Admin. district of Canada. Orig. Rupert's Land and the N.W. Territory, it was purchased from the Hudson's Bay Co. 1867, by the Dominion Gov. It now consists of the mainland W. of Hudson Bay, E. of the Rockies and N. of latitude 60° N. including the Northern archipelago. There are numerous lakes, of which the largest are the Gt. Bear and Gt. Slave. The principal rivers are the Mackenzie, Coppermine and Dubawnt. Mining is important, gold, radium and petroleum being found. The only other industry is the fur trade. The pop. consists mostly of Ind. and Eskimos. For administrative purposes the territories are sub-divided into districts governed by a commissioner, deputy-commissioner and 5 councillors. Area: 1,253,000 sq.m. Pop. 21,000.

NORTHALLERTON

Urban district, market town, and administrative centre of the N. Riding, Yorks. 30 m. N.W. of York. Pop. 8,500.

NORTHAMPTONSHIRE

(Northants.) Mid.-ind. county of Eng. which stretches from Oxfordshire to Lincs. The land is hilly; in the N.E. round Peterborough, is reclaimed fen-land. The chief rivers are the Welland, Nene and Great Ouse. Agriculture is important. Iron is mined, and boots and shoes manufactured. Northampton is the county town. Northants., with the Soke of Peterborough, returns 5 members to Parl. (incl. the borough constituency of Northampton). Pop. 405,870. Northampton, County borough and county town of Northants., on the Nene. Famous for the manufacture of shoes, it has also tanning and textile works, breweries, iron foundries, brick works. Pop. 105,000.

NORTHCLIFFE, Viscount

(1865-1922) Eng. journalist. Alfred Charles William Harmsworth was b. in Dublin. In 1888 he founded a weekly paper, *Answers*. Other papers were started and the foundation is laid of the Amalgamated Press. He and his brother Harold bought, 1894, *The Evening News*, a London daily paper. Founded *The Daily Mirror*, 1903, and 1905, bought *The Observer*. In 1908 Harmsworth became chief proprietor of *The Times*. In 1911 he sold *The Observer* and later *The Daily Mirror* but he kept control of *The Daily Mail* and *The Times*. In 1918 he became director of propaganda in enemy countries.

NORTHERN IRELAND

Country of the U.K. of Gt. Brit. and N.I. Under the Govt. of Ireland Act, 1920, it consists of the 6 Ulster cos. of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone (qqv.). It occupies the extreme N.E. of Ireland. Much of the land is hilly, with the Mts. of Antrim, and the Mourne and Sperrin Mts. rising to over 1,800 ft. In the centre is the fertile lowland of Lough Neagh. The chief rivers are the Bann, Lagan and Derg. Agriculture is important. Industries are centred in the N.E. around Belfast, and include the manufacture of linen, rope and machinery, and aircraft and shipbuilding. Belfast is the cap.; other towns are Londonderry, Lisburn, Bangor, Ballymena and Newry. N.I. has a House of Commons and Senate. The Gov. represents the Queen, and N.I. sends 12 members to the H. of Commons at Westminster. Area: 5,461 sq.m. Pop. 1,435,000.

NORTHERN TERRITORY

Part of the Commonwealth of Australia, between Queensland and W. Australia, with a coastline on the Gulf of Carpentaria and the Arafura Sea. Much of the interior is plateau, with the MacDonnell and Musgrave ranges. It lies almost entirely within the tropics, is dry and sandy, except in the extreme N. Most trop. crops can be grown, but pastoral farming is the chief industry. Gold, wolfram and mica are mined, and mother-of-pearl fishing is carried on. Darwin, the admin. centre, has a good harbour and airport. N.T. was taken over by the Commonwealth from S. Australia, 1911. Area: 523,620 sq.m. Pop. 27,095.

NORTHUMBERLAND

Most N. county of Eng., separated from Scot. by the Cheviot Hills and the Tweed. The coastal region is lowlying, rising to moorland and mts. (the Cheviot 2,676 ft.). The Tyne and Tweed are the chief rivers. Sheep are reared, and oats and barley grown. The county is rich in coal, and a large industrial area is centred on the Tyne. Newcastle-upon-Tyne is the county town; other towns are Alnwick, Berwick-on-Tweed, Wallsend and Hexham. The county has numerous Rom. remains, including Hadrian's Wall. The county returns 10 members to Parl. (7 borough constituencies). Pop. 825,650.

NORTHUMBERLAND, Duke of

John Dudley (c. 1502-53) Eng. statesman. In 1550 he was created Duke of Northumberland and opposed the Duke of Somerset, who was executed 1552. He mar. his son, Lord Guildford Dudley, to Lady Jane Grey, and proclaimed her queen. Forced to surrender to Mary Tudor, he was executed for high treason.

NORTHUMBRIA

One of the kingdoms of Eng. in A.-S. times. It came into existence c. 600. For a time it was the strongest of the Eng. kingdoms, but in less than a cent. it was subordinate to Mercia or Wessex.

NORWAY

Kingdom of N. Europe, the W. portion of the Scandinavian Peninsula, bounded on the E. by the U.S.S.R., Sweden and Finland it has a long coastline on the Arctic and Atlantic Oceans, the N. Sea and the Skagerrak. It is composed of a mt. mass of ancient rocks. The highest peaks, Galdhøpiggen and Jostunheim, exceed 8,000 ft. Numerous short, swift streams are a source of electricity. The coastline is indented with fjords. The climate is tempered by the N. Atlantic Drift and S.W. winds, and the coasts are ice-free all year round. At N. Cape there is continuous daylight from May until July; in winter there is a corresponding period without sun. Industry is the chief occupation. Cultivation is limited to the sheltered areas. Cattle are reared. There are important fisheries, and much frozen and canned fish is ex-

ported. Whaling is important in the N. Valuable forests provide abundant timber. There are mineral resources, including pyrites and ore. Oslo, the cap., and Bergen are the largest towns; others are Trondheim and Stavanger. The Lutheran religion is predominant. The present kingdom dates from 1905 when the union with Sweden was terminated. Prince Charles of Denmark was elected king, as Haakon VII. The legislative assembly, the Storting, has 2 houses, elected by universal suffrage. Occupied by the Germans in April, 1940, a puppet Govt., under Quisling, was set up, and the King escaped to London. A new govt. was elected in Oct. 1945. King Olav V came to the throne in 1957 on the d. of his father. Area: 125,065 sq.m. Pop. 3,694,000. Norwegian overseas possessions are Spitsbergen, Bear Is. and Jan Mayen in the Arctic Ocean; Bouvet Is. (S. Atlantic), Peter the First Is. (Antarctic Ocean) and a dependency on the Antarctic Continent.

NORWICH

[nor-ich] City, county borough and county town of Norfolk. It was a Rom. settlement. Industries include the manufacture of boots, shoes, textiles, mustard and starch; foundries and breweries. Near is the Univ. of E. Anglia (1962). N. returns 2 members to Parl. Pop. 119,760.

NOSE

Facial prominence above mouth in man and higher apes. Divided by a plate of cartilage into 2 nostrils.

NOTARY

Official, usually a solicitor or other law agent, who attests or certifies documents. There is a Soc. of Notaries in London. In Scot. the Notary Public fulfils tasks analogous to those of Commissioners for Oaths in Eng.

NOTTINGHAMSHIRE

(Notts.) Inland county of Eng. in the N. midlands. The E. part is lowlying, but, in the W. are hills of 600 ft. and a woodland district, called the Dukeries, which includes the remains of Sherwood Forest. The chief rivers are the Trent and Idle. The county is mainly agricultural in the E. and industrial in the W. The chief industries are the manufacture of lace, hosiery and bicycles; there are also iron foundries and cotton and woollen mills. N. is the county town; other towns are Newark, Mansfield and Worksop. Notts. returns 10 members to Parl. Pop. 916,520. Nottingham, City, county borough and county town of Nottinghamshire, on the Trent, 15 m. E. of Derby. The univ. received its charter in 1448. N. returns 4 members to Parl. Pop. 314,360.

NOVA

A variable star which suddenly, at long intervals of time, assumes a luminosity many times greater than that of its normal condition, to be followed by a gradual and fluctuating fall in brightness.

NOVA SCOTIA

Maritime prov. of the Dominion of Canada comprising a peninsula and an Is. Cape Breton (q.v.) in the extreme E. There are numerous rivers and lakes. Agriculture is the most important industry. Minerals include coal, gold, gypsum and salt. Iron and steel are manufactured at Sydney in C. Breton Is. The cod and lobster fisheries are also important. Halifax is the cap. and largest city. First settled by the Fr., Nova Scotia passed to Eng. 1621; its possession was contested until 1713, when, by the Treaty of Utrecht, it was ceded to Brit. It is gov. by a lieut.-gov. and a legislative assembly. The prov. sends 10 senators and 12 representatives to the Dominion Parl. Area: 21,068 sq.m. Pop. 723,000.

NOVAYA ZEMLYA

Group of Russ. Is. in the Arctic Ocean, con-

sisting of 2 large Is. and several smaller ones, between Barents Sea and Kara Sea. Used by Russians as nuclear test area. Area: 30,000 sq.m.

NOVOCAINE

Crystalline salt, very soluble in water, known also as ethocaine hydrochloride. It is a complex substance prepared from glycol bromohydrin, and used as a local anaesthetic in dentistry.

NUBIA

Region of N.E. Africa from the Red Sea to the Nile and from Egypt to Ethiopia. Important in ancient times, it now lies in the Repub. of the Sudan.

NUCLEAR PHYSICS

In 1911 Rutherford demonstrated that the atom was constructed of electrons revolving round a positive nucleus. In 1913 Bohr showed how such an atom could radiate and absorb energy in the same way as do the stars. Einstein announced his general theory of relativity in 1915. In 1925 there were formulated the fundamental principles of quantum mechanics. In 1929 there was establd. the phenomenon of the expansion of the universe. In 1938 there was worked out the mechanism by which stellar energy is thought to be generated. In 1939 came the first realisation that hydrogen is overwhelmingly the most abundant element in the universe. In 1948 the idea of the continuous creation of fundamental particles of matter was first introduced into a systematic scheme of evolution of the universe. The year 1950 brought Mr. Fred Hoyle's contribution. This caused much controversy and is contained in his book *The Nature of the Universe*.

NUCLEAR POWER

The U.K. Atomic Energy Authority are responsible for developing nuclear power stations. In the Calder Hall station the fuel consists of natural uranium metal rods enclosed in magnesium alloy cans. These are set in channels in a cylindrical structure of pure graphite enclosed in a steel pressure vessel. A controlled nuclear-fission chain reaction produces heat in the fuel and is cooled by carbon dioxide gas under pressure. To obtain a higher gas outlet temperature a reactor using uranium in powder form and stainless steel as a casing material has been developed. Known as the Advanced Gas-Cooled Reactor, a prototype is being operated at Windscale, adjoining Calder Hall. Other countries, esp. the U.S.A. have developed reactors cooled by water and the A.E.A. have one under construction at Winfrith, Dorset. One feature common to all these reactors is that during the nuclear reaction some of the uranium in the fuel is converted to plutonium, itself a valuable fuel. This may be used in the Fast Reactor, and research into Fast Reactor technology is endeavouring to make use of the stocks of plutonium now accumulating as a by-product. An experimental Fast Reactor at Dounreay in N. Scot. has been generating electricity for some time. It is also possible to obtain energy from the joining together or fusion of light elements such as hydrogen. Stars obtain their energy in this form, as does the hydrogen bomb. The problem of achieving a controlled reaction producing energy in an economically useful form is immense, but research is being undertaken on this aspect at Culham, Berks.

NUCLEUS

Central core of an atom, containing most of its mass, and bearing a positive charge of electricity. See NEUTRON; PROTON.

NUFFIELD, William Richard Morris, Viscount (1877-1963) Brit. industrialist and philanthropist. He became an apprentice in a small bicycle shop in Oxford, 1894. In 1912 he began to produce the Morris Oxford light car. After

World War I mass-production methods of manufacturing motor cars gained him a large fortune, £2 m. of which he has distributed for medical research, hospitals, scientific and industrial research, social studies, and the care of aged persons.

NUMBERS, Book of

Fourth book of the O.T. The title indicates its statistical records of 2 nat. censuses, beginning and ending the wilderness wanderings.

NUMERAL

Figure used to express a number. The use of letters was adopted by the Gks. and later by the Roms., who used the 7 letters—M. D. C. L. X. V. I. From about the 12th cent. European nations adopted the so-called Arabic system of notation.

NUNEATON

Municipal borough of Warwickshire, on the Anker, 9 m. N. of Coventry. Pop. 58,770.

NÜRNBERG

or Nuremberg. City in Bavaria, W. Germany, on the Pegnitz, 95 m. N.W. of Munich. An ancient town, with many fine old buildings, including the 11th cent. castle and the city walls. Toys, optical and electrical apparatus, and pencils are manufactured. In 1945-6 the major German war criminals were tried here by an Allied tribunal, found guilty of war crimes and crimes against humanity and sentenced to d. or long periods of imprisonment. Pop. 454,221.

NURSING

Tending the sick and injured. Modern concept of nursing was introduced in Germany in the 19th cent. and furthered in this country by Florence Nightingale during the Crimean war. Since then special branches have come into being, e.g. children's, fever, mental, tuberculosis and public health in the school and maternity clinics, as well as in child welfare clinics. Industrial nursing has developed rapidly since 1932.

NUTCRACKER

(*Nucifraga caryocatactes*) Bird belonging to the same family as the crow with brown and white plumage, the beak is long and nearly straight. Common in N. Europe and Asia.

NUTHATCH

(*Sitta europaea*) Bird with stout beak, slaty grey upper-parts, white throat and rufous underparts. The Brit. race is these widely distributed birds is practically confined to Eng. and Wales, esp. the S. counties.

NUTMEG

Seed-kernel of the fleshy fruit of a bushy evergreen tree (*Muristica fragrans*) indigenous to the Dutch E. Indies. It is used as an aromatic condiment; the fibrous network enclosing the nutshell is the spice called Mace.

NUX VOMICA

Disk-shaped seeds of a deciduous tree of the strychnos family (*Strychnos nux-vomica*), indigenous to India, growing also in N. Australia, Burma, Thailand and Indo-China. They yield most of the bitter alkaloid poisons, strychnine and its derivatives, employed medicinally as tonics and heart stimulants.

NYASALAND

[ne-as'-a-land'] Former Br. Protectorate in C. Africa, on the W. and S. shores of L. Malawi. E. called Malawi (q.v.).

NYERERE, Julius Kambarege

(1922-) African statesman. Formed Tanganyika African Nat. Union in 1954. Became P.M. of T. in 1961, and first Pres. of repub. on indep. in 1962. Negotiated union with Zanzibar in 1963 and became Pres. of Tanzania.

NYLON

Generic name for a class of polymers which can be spun into silk-like fibres.

15th letter and 4th vowel of the Eng. alphabet. Its form was derived from the Semitic alphabet. It has two main sounds in Eng., the long *o* as in *note*, the short *o* as in *hot*. It is used in combinations with other vowels to form the long *o* in *boat*, *foe*; the *oo* sound in *food*, *soon* and the short *u* sound in *food*, *blood*, *soon* combined with *u* it has various sounds—long, as in *through* and in *dough*; short, as in *cough*, *thought*, etc.

O.E.E.C.

Organisation for European Economic Co-operation set up in 1948 by Aust., Belg., Denmark, Eire, Fr., Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey, U.K. and the U.S.A. (See MARSHALL PLAN). A conference in 1957 paved the way for a free trade area in Europe. See COMMON MARKET.

OAK

(*Quercus*) Genus of deciduous or evergreen trees, and shrubs of the beech family, natives of N. temp. regions. Their nuts called acorns, have cup-like receptacles. Of nearly 300 species 2 only, *Q. robur* and *Q. petraea* are native to Brit.; they may be 120 ft. high. The timber was used in 16th-18th cent. Brit. for ship-building, roof-construction, wall-panelling and furniture. Oak bark is a source of tannin, acorns a swine food. See CORN. Oak Gall. Excrescence on the surface tissues of oak trees. Varying in size and form, they occur on leaves, flower-stalks, bark and rootlets. They are mostly due to gall-wasps, *Cynips*, whose eggs are deposited with an irritant fluid which occasions the abnormal cell-growth.

OAKLEY, Annie

(1860-1926) Amer. folk heroine. B. Darke County, Ohio. She was probably the greatest woman marksman of all time.

OASIS

[6-ā-sis] A fertile area in a desert; it is due to the presence of wells or subterranean water, or to the sinking of artesian wells in N. Africa and Australia.

OATES, Lawrence Edward Grace

(1880-1912) Eng. explorer. Educ. Eton and served with the cavalry in S. Africa (1901-2). In 1910 he went with Scott on the expedition to reach the S. Pole. On Mar. 17, 1912, Capt. Oates, crippled with frost-bite, walked out into the open and d. in order to make the task of his comrades easier.

OATES, Titus

(1649-1705) Eng. conspirator. He took Anglican orders, and posed as an R.C. in order to get inside knowledge of supposed Catholic plots. He concocted the false story of a 'Popish plot'. Charles II did not believe it, but the populace did, and acclaimed him as saviour of the country.

OATH

Solemn declaration*attested by the name of God. In Eng. Law nearly all evidence must be given on oath, save that, since the Oaths Act of 1888, anyone who objects to an oath on the ground of religious belief may make an affirmation instead.

OATS

Annual cereal grass (*Avena sativa*), apparently first cultivated in bronze-age Europe. It is grown exclusively in C. and N. Europe, Russia, the U.S.A., Canada, Argentina and elsewhere. Mostly grown for horse-fodder, oats are also an important human food.

OB

River of Asiatic Russ., which rises in the Altai Mts. and flows N. through the R.S.F.S.R., entering the Arctic Ocean by the Gulf of Ob. Length with its trib. the Irtysh 3,460 m.

OBAN

[6-ban] Burgh and seaport of Argyllshire, 113 m. N.W. of Glasgow, on the Firth of Lorne. It is a tourist and yachting centre. Pop. 6,758.

• OBERAMMERGAU

Village of Upper Bavaria, Germany. Situated in the Ammer valley, 45 m. S.S.W. of Munich. After a plague in 1633 the villagers vowed to present every 10th year, as an act of devotion, a living representation of Christ's Passion. Pop. 5,000.

OBESITY

Pathological condition of the body resulting in the over-accumulation of fat, which is deposited in the abdomen, around the various organs, in the thighs and neck. The cause may be due to over-eating, esp. of starchy foods, and to lack of outdoor exercise. Disease of the endocrine glands is assoc. with excessive obesity.

OBOE

A woodwind instrument with a double reed fixed to the upper end of a conical tube c. 2 ft. long. It has an upward compass of 2 octaves and a 6th from the B flat below Middle C.

O'BRIEN, William Smith

(1803-64) Irish nationalist. He entered parl. in 1826 and though a Protestant he supported the Catholic claims as a Whig. In an endeavour to effect a rising in Tipperary in 1848, O'Brien was arrested, tried and sentenced to death. In 18-4 he was released on condition of not returning to Ireland, and, in 1856, received a free pardon.

OBSCENE PUBLICATIONS ACT

This Act, introduced in 1959, revised the test of obscenity first laid down by Lord Chief Justice Cockburn in 1868 by requiring that no article shall be deemed obscene unless 'its effect is, if taken as a whole' such as to deprave and corrupt persons who are likely, having regard to all relevant circumstances, to read, see or hear' it. The Act provides that publication may be justified if it is 'in the interests of science, literature and art or learning', and that evidence to this end by qualified experts may be admitted. The Act had its first important test in October 1960, when Penguin Books Ltd. defended 'Lady Chatterley's Lover', which was vindicated. The 'Fanny Hill' case in 1964 invoked the provisions of the Act for seizure under warrant, leading to the book being banned in limited areas. The Act was amended in 1964 to allow search and seizure of goods potentially held for sale, allowing no automatic right of appeal to jury in such cases. Several books were seized for local prosecution during the year. See CHILDREN AND YOUNG PERSONS (HARMFUL PUBLICATIONS) ACT.

OBSERVATORY

There are 2 royal observatories in Britain, at Hurstmonceaux Castle (Sussex), and Edinburgh. In addition there are some 30 others all over the Commonwealth. The finest astronomical observatories in the world are those of the U.S.A. Among them are the Lick Obser. in Calif., the Lowell Obser. in Arizona, the Carnegie Solar Obser. on Mt. Wilson, Calif., and the Obser. on Mt. Palomar, Calif. (q.v.). The radio telescope of Manchester Univ. is the largest in the world. See **ASTRONOMY**; **RADIO ASTRONOMY**; **TELESCOPE**.

OBSTETRICS

Specialised branch of med. science concerned with the care of mother and child before birth (ante-natal), at birth (natal), and after birth (post-natal period).

O'CASEY, Sean

(1884-1964) Irish playwright. B. Dublin. Author of *Junio and the Paycock* (1925), *The Plough and the Stars* (1926), *Within the Gates* (1933), *The Bishop's Bonfire* (1955), and several autobiogr. books. *The Green Crow* (essays and stories), 1957.

OCCULTISM

The study of esoteric religion, philosophy and science. The main purpose is the development of spiritual powers which will enable the individual to be of service to mankind. This is known as 'white magic'. The same powers used against morality or religion are termed 'black magic'.

OCCUPATIONAL THERAPY

Term originally used to denote the occupational methods adopted for the relief and treatment of nervous and mental illness, but has now come to include the methods adopted for the same purpose for all illness where it is likely to expedite recovery. Apart from physical occupations such as weaving, raffia and basket work, toy-making, bookbinding, clay modelling, reading and debating circles, educational film shows, and gramophone and music recitals are organised. See **MENTAL HOSPITALS**.

OCEAN

Geographical name for the largest expanses of water which together occupy c. 72% of the earth's surface. Of these the Pacific is the largest, being equal to c. 1/3 of the total oceanic area and having the greatest depths. See **ATLANTIC**; **PACIFIC**; **INDIAN**; **ARCTIC OCEANS**. Oceanology is the study of ocean currents, temperatures, salinity, etc. and deep-sea expeditions have discovered a great deal about life in the oceans. The first real deep-sea enterprise was the British *Challenger* expedition of 1872-6, when animals were found at depths down to 3,000 fathoms. This established that life could exist in the oceans at great depths. The next important expedition was that organised jointly by the Royal Danish Navy and the Univ. of Copenhagen. The naval frigate *Gaiutha*, carrying some 20 scientists and technicians, set off in Oct. 1950 for a world cruise. They explored the Philippine Trench, the Sunda Trench S. of Java, the Banda Deep W. of New Guinea, the Solomon Trench and the Tonga-Kermadec Trench. The expedition demonstrated that life exists at the bottom of the deepest ocean, under a pressure of 1,000 atmospheres. When brought to the surface, all the animals were dead, but several species of bacteria, taken from the bottom clay, survived. Fishes, sea-urchins, star-fishes, crabs, etc. have not yet been found at depths below 4,000 fathoms.

OCEANIA

Name applied to the Is. in the Pacific Ocean. The main divisions of the region are the 3 large Is., Australia, Tasmania and New Guinea, and 3 Is. groups, Melanesia, Micronesia, and Polynesia (q.v.).

OCÉLOT

(*Felis pardalis*) Amer. tiger-cat, ranging from Arkansas to Paraguay. Normally tawny-yellow, spotted with black-edged, fawn-coloured markings. A forest animal, of savage disposition, it preys on small mammals and birds.

OCHRE

[ō-ker] Certain earthy or clay varieties of the oxides of iron. Yellow and brown ochres are forms of the hydrated oxide, limonite, whilst red ochre, or redde, is a variety of the peroxide haematite.

O'CONNELL, Daniel

(1775-1847) Irish politician. M.P. 1828-47. Entering Parl. when the Catholics were emancipated, O'Connell organised the agitation for the repeal of the Union, forming the 'Catholic Association'.

O'CONNOR, Feargus

(1791-1855) Irish politician. M.P. 1832-5 and 1847-52. At first a follower of O'Connell, O'Connor broke with him and joined the Brit. working-class movement, being assoc. with the Chartist movement.

OCTOPUS

ORDNANCE

Term for weapons of 1 in. calibre and over from which a missile is projected from the barrel by the pressure of gases resulting from an explosion. It is confined to guns, howitzers and mortars, and includes tank guns, anti-aircraft guns and naval guns of all calibres. Modern guns of all calibres have barrels in which helical grooves (rifling) impart a rotary motion to the projectile, which has a driving band of soft metal which engages with the rifling of the gun. The calibre of a gun is the diameter of the bore, and the length of the bore is expressed in calibres: e.g. a 45 cal. 15 in. gun is a weapon 56 25 ft. long. It would seem that guns are likely to be superseded by weapons of the rocket type and radar-guided missiles.

ORDNANCE SURVEY

The Ordnance Survey was formed in 1791 to make an official map of Gt. Brit. for defence purposes, at a scale of 1 in. to 1 m. It was entrusted to the Board of Ordnance, hence the title. Control was transferred from the War Office to the Board of Agriculture. The whole of Gt. Brit. is mapped at a scale of 2½ in. to 1 m. With the assistance of the R.A.F. air photography is being used in a 20 yr programme, begun in 1950, of mapping the urban areas of Gt. Brit. at a scale of 50 in. to 1 m. Infra-red photography will also be used to estab. low tide marks on the coasts.

OREGON

ORGAN

Keyboard wind instrument of pipes, bellows, etc. The depression of keys on a keyboard (the complete set of keyboards, pedals, stops, etc., is called the console) admits air to certain pipes according to the stops drawn, each stop operating a set of a given pitch and tonal quality. These range from less than 2 ft. to 32 ft. Very large instruments may have a 64 ft. stop. The stops (or push-buttons) are usually arranged according to depths on either side of the manuals, or above the top manual. Each has its own group of stops. There is also a pedal organ which is played with the feet. By a system of manual pistons great flexibility is exercised in obtaining a wealth of tone colour, by linking one depth to another. Balanced swell pedals, operated by the right foot, open and close louvres on the boxes which contain the pipes of the Swell and (frequently) Choir depis, thus obtaining the splendid crescendo-diminuendo effect so typical of this instrument. Most modern organs have electric mechanism. Outstanding examples of large Brit. instruments are the Willis 5-manual organ in Liverpool Cathedral, and the Harrison 4-manual in the Royal Albert Hall.

ORGANIC CHEMISTRY

Orig. the chem. of living materials, but now the study of all compounds containing carbon. Antoine Laurent Lavoisier (1743-94) established the composition of many natural products, and showed that nearly all vegetable substances were composed of carbon, hydrogen and oxygen, while animal substances contained these three elements, with nitrogen and sometimes phosphorus and sulphur in addition. Today, organic chemistry covers a very wide range of substances, from the simple hydrocarbons to the complex starches, proteins, etc. Many synthetically prepared organic compounds do not occur in nature.

ORIGEN

(c. 185-253) Gk. father of the ch. B. Alexandria, of Christian parentage. He influenced the course of ch. hist. for cents., formulating its dogmas and founding Biblical criticism. He died at Tyre. His works include *On First Principles*, the earliest attempt to form a Christian phil.

It returns 1 member to Parl. Pop. 105,560.

OXIDE

In chem. stry. a compound formed by the combination of an element with oxygen. All the non-metallic elements, except hydrogen, form oxides which combine with water to produce acids, these being termed acidic oxides. Metals when burnt in air or oxygen form basic oxides, which, uniting with water, produce hydroxides.

OXLIP

(*Primula elatior*) Perennial herb of the prim-

296 · OXYGEN

rose family, native of Europe and Siberia. The scentless flowers form a stalked umbel, the corolla limbs being broader and flatter than in the primrose.

OXYGEN

A colourless gas discovered by Priestley in 1774. The most abundant element, it forms 46.5 % of the earth's crust. Liquid oxygen is blue in colour and shows magnetic properties. The density is 1.43 times that of air. Chem. sym. O.

OYSTER

(*Ostrea*) Cosmopolitan genus of bivalve molluscs. The common edible *O. edulis* of Brit. and European coasts is very prolific. The larvae or 'spat' settle on a suitable bank or reef, metamorphose into young oysters attached by the flattened valve, and there remain until dislodged. During the spawning period, May-Aug. they are out of season. Pearl oysters form a distinct family.

OYSTER-CATCHER

(*Haematopus*) Genus of wading birds of the plover tribe. The European *H. ostralegus*, 16½

in. long, is resident in Brit. It has a long coral-red bill, black and white plumage and pink feet; 3-4 blotched clay-coloured eggs are laid in hollows near the shore. It feeds on mussels, limpets, etc.

OZOKERITE

[ô-zô-ker-it] Wax-like hydrocarbon found with petroleum. When pure it is transparent, pale yellow to greenish in colour, with an odour like benzine, and of the hardness of beeswax. Purified with sulphuric acid, ozokerite forms a white wax known as ceresin used in candles and boot polishes, and as an insulating material.

OZONE

O₃. Gas having a distinctive odour, and formed in dry oxygen or air subjected to a series of sparks from an electrical machine. It is a powerful oxidising agent, bleaching vegetable dyes and destroying organic matter, and is used on a large scale in purifying drinking water, bleaching, and for deodorising the air in crowded places. The characteristic effluvia of seaside areas is probably produced by other agencies, e.g. seaweed.

P

16th letter of the Eng. alphabet. It is a labial or 'p-sound' normally pronounced as in *pip*. In words derived from the GK it is often silent when combined with another consonant as in *psychology*, *psalm*. The combination *ph* is sounded as *f*, e.g. *philosophy*, *pharmacist*.

PACIFIC, War in the
On Dec 7, 1941, Pearl Harhour (*q.v.*), the Philippine Is and Malaya were attacked without warning and war was declared on Japan by U.S.A., Gt. Brit., Holland, Australia, Canada, New Zealand and some Lat Amer nations. Burma was invaded from Siam on Dec 14. Brit. forces were pushed out by May 17, 1942, and the Burma road was cut. The Japanese occupied Java, then New Guinea, Gilbert Is., New Brit. and the Solomon Is. The first setback suffered by the invaders was the battle of the Coral Sea when they were prevented from moving farther S towards Australia. In June, 1942, the Japanese navy was decisively defeated at the battle of Midway Is. Lt.-Col. Doolittle made a daring bombing raid on Japan itself (April 18, 1942). In Aug 1942 Guadalcanal was invaded by the Amers under Gen. MacArthur. In Dec 1942 Brit. forces under Gen. Wavell thrust into Burma, and Gen. Wingate's 'Chindit' raiders had inflicted heavy losses behind the enemy lines. Late in 1943 Gen. Joseph W. Stilwell began his advance into N. Burma, while a Japanese counterthrust to the S moved into India and threatened Imphal and Kohima (Spring, 1944). The Japanese failed in their objective and Amer., Chinese and Brit. forces took the offensive from the N., E. and W. In Sept. 1944, the Allies had launched a 2-pronged attack towards Japan through the Pacific Is.: the 1st prong through New Guinea, New Brit. and the Philippine Is. (Oct. 1944) and the 2nd through the Gilbert Is. (Nov. 1943), the Marshall Is. (Jan. 1944), the Marianas (June 1944) and the Caroline Is. (Sept. 1944). The use of the atomic bomb on Hiroshima (Aug. 6, 1945) and Nagasaki (Aug. 9, 1945) and the entry of Russia (Aug. 9, 1945) into the Pacific war made the actual invasion of Japan unnecessary.

PACIFIC ISLAND TRUSTEESHIP

U.S. trusteeship set up by U.N. Security Council in 1947. 96 islands of Mariana (excluding Guam), Caroline and Marshall groups. Pop. 81,000.

PACIFIC OCEAN

Largest ocean of the world, with an area of c. 63,800,000 sq.m. containing many Is. In the N. it is bounded by the Aleutian Is. but on the S. it is widely open, and its mean depth is much greater than that of the Atlantic. The greatest depth known is 36,198 ft. in the Marianas trench.

PADEREWSKI, Ignaz Jan

[*ef'-ski*] (1860-1941) Polish pianist and statesman. After a long career as teacher and concert pianist he became 1st Pres. of the Polish Repub. 1919.

PADUA

City of Veneto, N. Italy, 25 m. W. of Venice. Famous buildings include the Palazzo della Ragione, and the univ. founded by Frederick II, 1238. Pop. 198,403.

PALONY

or *Peony*. Genus of perennial herbs (*Paeonia*) native to Europe, Asia and N.W. Amer. The carmine flowers of the common peony occur in single and double-flowered cultivated forms.

PAGANINI, Niccolò

PAHANG

[*pa-hung*] E. coast state of Malaysia. The surface is mountainous in the W. The seat of govt. is at Kuala Lipis. Area, 13,873 sq.m. Pop. 359,739.

PAINT

Preparation of a pigment mixed with an appropriate vehicle. Some pigments are of mineral origin, others are derived from plants. A few are of animal origin, while many synthetic dyestuffs are used as pigments. **Painting.** The art dates back to palaeolithic times when early man made drawings on the walls of caves. In later times in Egypt and Greece mineral and some organic pigments were used. In medieval Italy the artists painted in fresco and tempera. Then with the Renaissance came the beginnings of perspective, the pioneer artists being Masaccio, Uccello, Mantegna and Leonardo. With the Van Eycks in the Netherlands originated oil painting, later carried to a high level of excellence by the Dutch and Flemish schools under Rubens, Rembrandt, Hals and others. In Italy the new method was taken up by Leonardo, Perugino and others, and used by the Venetian School under Tintoretto and Veronese. A further development came with the use of water-colour painting in Eng. during the 18th cent.

PAISLEY

[*pāz'-l*] Burgh of Renfrewshire, on the Cart, 7 m. S.W. of Glasgow, the centre of cotton thread manufacture. There is also an abbey, partly restored. P. returns 1 member to Parl. Pop. 26,670.

PAKISTAN

2 pieces of territory almost 1,000 m. apart. W. Pakistan is much larger than E. Pakistan but the density of pop. is very much less, the former having 41 million people and the latter 51 million. W. P. consists of the former provinces of Sindh, Punjab, Baluchistan, the N.W. Frontier Prov., Bahawalpur and Khairpur, while E. Pakistan comprises E. Bengal and most of the former Assamese district of Sylhet. 86% of the Pakistanis are Moslems and gained indep. from Brit. rule on such a religious basis 1947. The cap. was removed to Rawalpindi, 1960. In March, 1956, P. became 'The Islamic Repub. of Pakistan', but the Constituent Assembly decided that the country should remain in the Brit. Commonwealth. In 1958 the constitution was abrogated, and P. came under martial law, with Gen. (later F.M.) Ayub Khan as Pres. E. Pakistan is bordered to the E. by the Chittagong Hills and the Shillong Plateau. In the N. it reaches almost to the Himalayas but at almost every point it is surrounded by Indian territory. The main artery

is the Ganges, the Brahmaputra and the Meghna rivers. The rivers, which flood widely during the monsoon period, have created large alluvial and deltaic areas. The rainfall is confined almost entirely to the summer monsoon period but there are preceding rains in April and May which bring the total in the S. and E. to over 100 in. per year. E. Pakistan is predominantly agricultural. The region is particularly suited to the growing of rice, and of jute. Commercial agriculture and communications were centred on Calcutta but the partition boundary has cut across the railways and divided the raw material from the industry. E. Pakistan had no industry except some rubber, cotton spinning and weaving and sugar milling. Textile mills are now being built in and near Dacca, the only large city. There is no coal, oil, or iron in E. Pakistan, but there is a large hydro-electric potential which is being developed on the Karnafuli river. The Ganges and other rivers are important highways. P. has proved itself a viable state largely owing to the jute of E. Pakistan which brings in nearly twice as much as the cotton of W. Pakistan. In the N., W. Pakistan is bordered by the wooded ranges of the Himalayas and stretches in the W. over the ~~wooded~~ plateaux of Baluchistan to the borders of Iran and Afghanistan. The most important part is the sediment-filled basin of the river Indus. In the S., where the E. state boundary crosses the Thar Desert, the Indus passes through a region with less than 5 ins. of rain per year. As compared with E. Pakistan and India, the onset of the monsoon rains are later, the preceding months are hotter and the winters colder, except in the extreme S. Winter wheat is the chief cereal crop of W. Pakistan. The chief cash crop is cotton which depends almost entirely on perennial irrigation. The Punjab and Sind have canal and barrage schemes built by Brit. capital. The amount of water within the drainage area is not sufficient to meet the needs. Mineral wealth consists of salt from the Salt Range and oil from the Potwar Plateau to the north of it. Karachi, since partition, has grown in pop. from 300,000 to over 1 million.

PALAEOLITHIC

Term denoting the rudely, chipped and flaked flints and other implements produced by man during the older phase of the prehistoric stone age.

PALE, The See IRELAND.

PALERMO

Cap. and seaport on the N. coast of Sicily. Orig. a Phoenician colony of 8th-6th cents. B.C., it was also an important Carthaginian centre until acquired by Rome, 254 B.C. Pop. 587,063.

PALLADIUM

Rare metallic element, Chem. sym. Pd and at. wt. 106.7. P. is silvery white in colour and like platinum is unaltered by exposure to air, but is slowly attacked by nitric acid.

PALLAS

(astronomy) One of the minor planets (or asteroids) revolving round the sun between Mars and Jupiter. It was discovered by Olbers at Bremen in 1802. Its orbit is inclined 35° to the ecliptic, and it revolves round the sun in 4.61 years. Its diameter has been estimated at c. 350 m.

PALM

(*Palmaceae*) Family of endogenous plants, mostly large trees, natives of trop. and subtrop. regions. Estimated at 600-1,000 species. The coconut's seed-kernels, the date-palm's pulpy fruit, the sago-palm's farinaceous pith, and the cabbage-palm's terminal buds are edible. Other species yield palm-sugar or jaggery, palm-wine or toddy, candle wax, oil, vegetable ivory, fans, rattans, leaf-stalk fibre, leaves for thatch, and the like. The only European species, *Chamoerops humilis*, the Mediterranean fan-palm, is used for basketry, hats and vegetable horse hair. **Palm Oil**, Fatty substance from the fruits of several palms, pre-eminently the W. African oil palm, *Elaeis guineensis*. The boiled pericarp yields an orange-red fat, which melts at 80.5° F. Palm kernels yield a white oil used in making margarine. See DATE.

PALM SUNDAY

Sun. before Easter; 1st day of Holy Week. In the R.C. Ch. palm branches are carried in commem. of Christ's entry into Jerusalem.

PALMERSTON, Viscount

Henry John Temple (1784-1865) Eng. statesman, M.P. 1807-65; P.M. 1855-7, 1857-8 and 1859-65. Best remembered for his vigorous foreign policy. He was forced to resign in 1851 but soon returned, and as P.M. in 1855, vigorously prosecuted the Crimean War. He met his match in Bismarck, and was worsted in the Schleswig-Holstein episode of 1865.

PALMYRA

Ancient city of Syria in a desert oasis, 120 m. N.E. of Damascus. Under the Rom. Emp. it was important because of its position on the Euphrates caravan route. Under Hadrian it enjoyed indep. in the 3rd cent. Modern P. is a town on the oil pipeline to the Medit.

PALOMAR OBSERVATORY

On Mt. P., Calif. U.S.A. it houses the Hale reflecting telescope, the largest in the world, having a 200-in. mirror and a range of a billion light-years.

PAMIRS

Region of lofty tablelands in C. Asia on the borders of Tajik (U.S.S.R.) and Sinkiang (China). It is a treeless desert area crossed by mt. ranges, Hindu Kush and Tien Shan.

PAMPAS

Plains of Argentina, from the Andean foothills to the Parana and the Atlantic coast. Prior to the coming of settlers the plains were one vast sea of Pampas grass (*Cortaderia argentea*). As a result of the work of pioneers and their descendants in the last 80 years, the Pampas is no longer a treeless and uncultivated area. Wire fencing encloses fertile fields, and there are trees of many kinds to prevent soil erosion and to provide shade for cattle during the summer. Herds spend their time on the rough pastures of open range all the year round.

PAN

In Gk. myth. the god of shepherds, huntsmen and rural people, protector of flocks and herds, of wild beasts and bees.

PANAMA

Repub. of C. Amer. between Costa Rica and Colombia, on the isthmus of P. It has long coastlines on the Pacific Ocean and Caribbean Sea, and is crossed at its narrowest part by the P. Canal Zone. Mt. ranges run parallel to the coasts, enclosing numerous valleys and plains. Much of the land is forested; agriculture is primitive. Sp. is the official language, and R.C. the state religion. The pop. is mixed. P. was formerly part of the Repub. of Colombia, but became indep. 1903. There is a Pres. and a chamber of 51 deputies. Area: 28,576 sq.m. Pop. 1,076,000. Panama City, Cap. of the Repub. of Panama, near the Pacific entrance to the Canal. Built in the 17th cent. P. has a cath. with mother-of-pearl domes, and a univ. Pop. 273,440.

PANAMA CANAL

Canal connecting the Atlantic and Pacific Oceans. It was constructed as the result of a treaty (1903) between the U.S.A. and Panama.

The canal is c. 50 m. long, with 12 locks. The width is from 300 to 1,000 ft. and the min. depth 41 ft. The average time of passage is 7 to 8 hours. It was informally opened to traffic Aug. 15, 1914. The official opening was on June 12, 1920. The Hay-Pauncefote Treaty provides for the use of the canal under equal terms by vessels of all nations. The suggestion that a canal should be cut was first made in the 16th cent., but it was not until 1876 that work started.

PANCREAS

Glandular organ situated in upper part of abdomen. Secretes digestive substances which act on carbohydrates, fats and proteins.

PANDA

(or Wab) A mammal (*Ailuropus fulgens*) found in the woody parts of the mts. of N. India. In size it is approx. equal to a large cat. Is chestnut brown in colour, feeds mostly on vegetable food.

PANDIT, Mrs. Vijayalakshmi

PANSY

Perennial herb of the violet order (*Viola tricolor*), native to Europe, N. and W. Asia and N. Africa.

PANTHER

Large carnivorous mammal of the cat family, indistinguishable from the Old World Leopard. In N. Amer. the name colloquially as 'painter', denotes the Puma which in S. Amer. is sometimes called the Cougar.

PAPACY, The

Term employed in 2 senses (1) eccles., denoting the system under which the Pope, as successor of St. Peter and Vicar of Christ, governs the Catholic Ch. as its supreme head, and (2) historical, signifying the papal influence as a political force. Under Innocent III in the 13th cent. the Pope became a sort of emperor. A temporal Papal State grew up with an area of 17,000 sq.m. After the Austro-Ital. War of 1859 nearly 4 of this territory was added to the kingdom of Italy, Rome and its environs being preserved for the Pope by the Fr. In 1870 Rome was adopted as the seat of govt. of united Italy, and the Papacy restricted to the Vatican. In 1929, by the Treaty of Feb. 11, the full and indep. sovereignty of the Holy See in the city of the Vatican was recognised.

PAPAW

Small evergreen tree akin to the pass on flower order of S. Amer. origin (*Carica papaya*). Now widely naturalised in the tropics, its long-stalked 7-lobed leaves, 2 ft. across, shelter m'lon-shaped yellow fruits 10 in. long.

PAPER

Substance manufactured from vegetable fibres of different lengths and sizes, fitted together to form a sheet or web. The art of making paper from rags is credited to a Chinese named Tsai-lun (c. A.D. 105) and paper was in general use in China, for c. 500 years before its method of manufacture became known to the Moors and Arabs (c. 751). The first Eng. paper mill was estab'd. by John Tate at Stevenage, Herts. in 1489. Other important years in the chronology of papermaking are 1809, when a machine for making paper in a continuous web was invented by the Frenchman, Louis Robert; 1840, which saw the introduction of mechanical pulp by Keller; the introduction of esparto grass by Routledge, 1857; the invention of the process of wood pulp by Tilghmann, 1866. The 5 main types of fibre used in papermaking are cotton, linen, esparto, straw and wood. Esparto papers are distinguished for their bulk, opacity and their close, uniform surfaces and are thus eminently suitable for fine printing.

PAPHOS

PARIS

Cap. city of Fr. situated on 2 Is. and on both banks of the Seine, 110 m. from the sea. It is an important commercial centre and river port, with a variety of manufactures, e.g. clothing, food products, footwear and jewellery. Famous buildings include the Louvre, and the Bastille; the cath. of Notre Dame (1163-1230), the Palais Royal, Champs Elysées and Palais de Justice; the Conciergerie; Bibliothèque Nationale and Hôtel des Invalides, the Arc de Triomphe, the Palais du Luxembourg, the Opéra, Champ de Mars, and the Eiffel Tower. The chief educ. inst. is the Univ. of Paris, including the Sorbonne. More than 30 bridges cross the Seine. Its historical importance dates from A.D. 508, when Clovis built his cap. on the Ile de la Cité. The decay of feudalism and the rise of the guilds in the 11th cent. hastened the city's growth. In 1422 the Eng. took P. and held it against Joan of Arc (1429). After 1559 the city was the residence of the kings of Fr. Modern Paris dates from the Renaissance; Catherine de Medici began to build the Tuileries in 1564. Quays were constructed and the city spread, esp. under Louis XIV. Besieged and captured by the Pruss. in 1870, it narrowly escaped a 2nd capture in Sept. 1914. It was occupied in 1940 and liberated in Aug. 1944. PARLIAMENT

Word used for the legislature of Brit. and other self-governing parts of the Brit. Commonw. The Eng. Parl. has been developed from the Witan of the A.-S. kings, and the King's Council of the Normans. In the 13th cent. knights of the shire and representatives from the towns joined the barons, abbots and bishops and parl. in the modern sense began. Both Simon de Montfort and Edward I have been credited with the decisive step, but the development was gradual. Early in the 14th cent. it was divided into two, a form it has since retained, the House of Lords and House of Commons. The Lords were much more powerful, the Commons' assent being usually taken for granted, but gradually the Commons made themselves equal and in the 19th cent. became the dominant partner. The Tudor sovereigns made their parls. register their will, but in the time of the Stuarts the memorable struggle between king and parl. became a civil war. Having asserted in the Bill of Rights, 1689, their control of the raising of finance, Parl. in 1694 passed a Triennial Act which stated that not more than 3 years should pass without the calling of a parl. In 1715 a Septennial Act was passed by which a parl. could sit for 7 years, and this remained the law until 1911, when the Parl. Act reduced the period to 5 years. Nevertheless, parl. being a sovereign body, can prolong its own existence as it did during both World Wars. The Parl. Act of 1911 made the House of Lords subordinate to the House of Commons. It could delay the passing of a bill into law, but has no control over money Bills. If the Commons, under the required conditions, pass a measure 3 times that Bill becomes law, whether the Lords oppose or not. A parl. is called together by the sovereign. Its sittings are divided into sessions. Each session is prolonged, but a parl. is dissolved. This is done on the advice of the P.M. and a Gen. Election must follow. The parls. in Canada, Australia, and elsewhere follow very largely the Brit. model, except that their 2nd chambers contain no hereditary elements and have rather more power than the House of Lords. See COMMONS, HOUSE OF; LORDS, HOUSE OF.

PEPPER

Perennial climbing shrub (*Piper nigrum*) typical of the pepper order. Indigenous to the Malabar coast of India. Cultivated in Malaya, as well as the Philippines, W. India and other trop. lands. It produces a black or white spice derived from the dried fruits. See CAYENNE PEPPER.

PEPPERMINT

European perennial labiate herb (*Mentha piperita*). Growing wild in Brit. with creeping rootstock, opposite coarsely-toothed leaves and loosely-spiked flowers. It is cultivated in Brit., continental Europe and the U.S.A. for its pungent essential oil, which contains menthol.

PEPYS, Samuel

(1633-1703) Eng. diarist and Sec. of the Admiralty during the Stuart Restoration (1673-88). He secured a post in the Navy office and held several important public appointments. His shorthand diary (1659-69) gives a picture of his times and is a revelation of his character.

PERAK

(pě'-rā) State of the Fed. of Malaya, on the W. coast. Rubber and tin are the main products. The chief towns are Ipoh, in the centre of the rich tin-producing Kinta valley, and Kuala Kangsar. Area: 7,980 sq.m. Pop. 1,470,478.

PERCH

(Pěrb) The common perch (*P. fluviatilis*), seldom exceeding 3 lb., inhabits rivers and lakes in Brit. and elsewhere.

PERFUME

Substance which has a pleasant sweet-smelling odour, as in the case of certain gums, essential oils of plants, some animal products and synthetic compounds. For incense, odoriferous gums such as frankincense or olibanum, and gum benzoin are used, along with sandalwood. Musk, civet and ambergris are animal perfumes, and the essential oils include otto of roses, the oils of lavender, rosemary, etc.

PERICLES

(c. 495-429 a.c.) Athenian statesman. He distinguished himself as a gen. as well as a statesman. Under his admin. the naval power of Athens was built up, the city was developed and embellished, and under his patronage the sculptor Phidias worked. His policy during the Peloponnesian Wars was one of concentration in Athens.

PERIDOT

The transparent olive-green and bottle-green varieties of the mineral olivine, used as gemstones.

PERIM

Small Brit. Is. in the Straits of Bab-el-Mandeb at the S. end of the Red Sea, admin. as part of the State of Aden. Pop. 283.

PERISCOPE

Optical instrument used in trench warfare and in submarines for enabling an observer to see surrounding objects from a lower level.

PERITONEUM

Thin translucent membrane lining cavity of abdomen and covering coils of bowel and abdominal organs. In the female the Fallopian tubes pass through it. Inflammation is called peritonitis.

PERIWINKLE

(1) Genus of perennial evergreen herbs or trailing undershrubs of the dogbane order (*Vincet*), natives of temp. Europe, Asia and N. Africa. Long naturalised in Brit., the greater *V. major*, and lesser *V. minor*, with bluish-purple, salver-shaped corollas, are cultivated in gardens. (2) Also, popularly, *Littorina littorea* the largest and most widely spread species of Sea Snail.

These gasteropod molluscs occur on every rocky shore in profusion.

PERLIS

State of the Fed. of Malaya in the N.W. on the

borders of Slam. Rice is grown; rubber and tin are also produced. Kangar is the chief town. Area: 310 sq.m. Pop. 106,980.

PERMANGANATES

The salts derived from permanganic acid, the most important being *permanganate of potash* which is readily decomposed with evolution of oxygen when in contact with organic matter.

PERÓN, Juan Domingo

(1896-) Pres. of the Argentine Repub. 1946-55. Orig. a leader of the group of the pro-fascist army officers which seized power in 1943; elected Pres. June, 1946. After considerable unrest Perón was forced to resign and flee the country in 1955. In 1945 he mar. María Eva Duarte (1922-52).

PERSIA

Country of W. Asia, bounded on the N. by the Caspian Sea and on the S. by the Persian Gulf. It is mainly an arid tableland, encircled, except in the E., by mt. ranges which rise to 18,600 ft. in the Elburz Mts. of the N. The E. and C. portion is an extensive salt desert. Persia is predominantly an agricultural country. Sheep and goats are reared and the wool used for the manufacture of carpets. Dates, cereals, fruit and cotton are grown in the S. and there are extensive forests in the N. and W. Chief export is crude oil. March, 1951, the oil industry was nationalised. The Brit. Govt. refused to recognise the position and the dispute reached internat. proportions. This was not settled until 1954 when a consortium of 8 Cos. was formed to handle Persian oil, and compensation of £25,000,000 was awarded to Anglo-Iranian Oil Co. Tehran in the N. is the cap., other towns are Tabriz, Isfahan (the old caps.), Meshed and Shiraz. Bushire is the chief port. The people are mainly Shi'ah Moslems, but some are Sunnites, Zoroastrians, Jews, and Armenian and Nestorian Christians. Persia has a long and interesting hist. beginning with the Sumerians, continuing through the Medes to Alexander the Great, and the Arab, Turkish and Mongolian conquests, the periods of the two great warriors Tamerlane (1336-1404) and Nadir Shah (1668-1747), and the Safavid and Qajar dynasties, 1499-1736 and 1795-1925 respectively. In 1921, Riza Khan Pahlavi, a former army officer and P.M. seized power, was elected Shah, 1925. In 1941 following the German invasion of the U.S.S.R. Brit. and Soviet forces entered the country and expelled the Axis agents, who had been active there. Shah Riza, who had shown Axis sympathies, abdicated in favour of his son and left the country. His son, Mohammed Riza, the present Shah, had to flee the country in Aug. 1953, when a move to arrest the P.M., Dr. Mossadeq, who was attempting to overthrow the régime, failed. A few days later the Royalist faction gained control by a *coup d'état*, arrested Mossadeq, and recalled the Shah. In 1967, the Shah crowned himself and his wife, Queen Farah. His Heir, Prince Reza (b. 1960). Area: 636,000 sq.m. Pop. 20,849,000. Persian Gulf. Arm. of the Ind. Ocean, lying between Persia and Arabia. The Shatt-el-Arab flows into the gulf, which is c. 550 m. long.

PERSIMMON

(or Date-plum) Deciduous tree of the ebony family (*Diospyros virginiana*). It produces a sweet, orange-yellow plum.

PERSPIRATION

Process by which water is excreted by the sweat glands on to the surface of the skin from which it evaporates. The heat required for the evaporation comes almost entirely from the body, and so perspiration is a means possessed by the body to control its temp.

PERTH

Cap. of W. Australia, 12 m. from its port, Fremantle. P. was founded 1829, but did not

306 • PERTSHIRE

develop until the discovery of gold there, 1891. Now a busy commercial centre. Pop. 431,000.

PERTSHIRE

Midland county of Scot. In the N. are the Grampian Mts. rising to over 3,000 ft., e.g. Ben Lawers (3,984 ft.). The Ochils and Adlaw Hills cross the county in the S.E. To the N. of these lies the fertile Vale of Strathmore. The chief rivers are the Tay and Forth; Katrine, Tay and Erich are the largest lochs. Agriculture is important in the lowlands, esp. the Carse of Gowrie, and cattle are reared. Perth is the county town. With Kinross-shire, P. returns 2 members to Parl. Pop. 124,441. Perth, City and county town of Perthshire, on the Tay. It has large industries, of which dyeing is the chief. Perth was the cap. of Scot. until the 15th cent. Pop. 41,000.

PERU

[pə'ru] Repub. of S. Amer. on the Pacific coast. It may be divided into 3 regions, the narrow coastal plain, the Andes and the Montana, comprising the E. slopes of the mts. and the Amazon lowlands. The W. Cordillera of the Andes is the highest, containing Huascaran (22,000 ft.), and from it many rivers flow into the Pacific. In the S. is the Bolivian border, is L. Titicaca, the largest lake in S. Amer. The climate varies according to altitude; along the coast it is semi-trop. Agriculture is of great importance, esp. in the coastal strip. Cotton, sugar, rice, wheat, vegetables and fruits are grown. Peru is rich in minerals. In addition, guano, a govt. monopoly, is worked on the Lobos and other Is. Industries have developed, such as textiles, flour milling, and meat packing. Lima is the cap. Sp. is the official language and R.C. is the state religion. Peru was the centre of the great Inca civilisation subjugated by the invading Sp. in the 16th cent. For nearly 300 years Peru was under Sp. rule: in 1821 its indep. was proclaimed, and a revolutionary war followed. According to the Constitution of 1933, the Pres. governs with the aid of a senate, and a chamber of deputies. Area: 496,093 sq.m. Pop. 10,857,000.

PERUGINO

[pə'ru:nə] (c. 1446-1524) Ital. painter. In 1480 Pope Sixtus IV commissioned him to work on the decoration of the Sistine Chapel. Raphael was among his pupils.

PERUVIAN BARK

The bark of various species of *Cinchona*, natives of Peru, Bolivia and Ecuador, from which quinine and allied alkaloids are extracted. Grown in Java, Sikkim, Ceylon, Jamaica and elsewhere.

PESTALOZZI, Johann Heinrich

(1746-1827) Swiss educ. reformer. Trying to apply Rousseau's theories, he evolved his own philosophy, that social reform can best be brought about by moral and intellectual training of the individual child. Froebel was one of his pupils, and Robert Owen was influenced by his ideas.

PÉTAIN, Henri Philippe

(1856-1951) Fr. soldier and politician. He rose to prominence by his defence of Verdun in 1916. In 1940 he was Vice-Premier and led the party who wished to capitulate to Germany after the collapse. On Reynaud's resignation he became P.M. and then Chief of the State in the Vichy Govt. of unoccupied Fr. He was captured and tried by the Fr. Govt. after the liberation, and sentenced to d. for treason, but sentence was commuted to life imprisonment.

PETER

One of the 12 apostles. Named Simon, son of Jonas, and orig. a Galilean fisherman, he was one of Christ's earliest disciples. His confession concerning the Messiahship of Jesus, the bestowal of his 2nd name Cephas or Peter, and

the risen Lord's commission to 'feed My sheep', prepared him for a dominant place in the infant ch. He was traditionally martyred under Nero in Rome.

PETER I

(1672-1725) Tsar of Russia, known as the Great. He became tsar in 1682. He devoted himself to the reorganisation of his army and navy. In 1696 he went to war with Turkey, winning Azov, and in 1700 with Sweden acquiring the Baltic provs. and part of Finland after the victory at Poltava (1709). His wife eventually succeeded him as Catherine I. In 1703 he founded St. Petersburg.

PETERBOROUGH

City of Northants., on the Nene. Industries include the manufacture of agricultural implements. The cath. is largely Norman. Pop. 63,430.

PETERHEAD

Burgh and port of E. Aberdeenshire, on P. Bay. Besides the herring fishery, there is a granite polishing industry. Pop. 12,698.

PETRA

Ancient stronghold of Edom, Israel, on the Wadi Musa in a valley between the Dead Sea and the Gulf of Aqaba.

PETRARCH

(Francesco Petrarca) (1304-74) Ital. poet. Became an enthusiastic classical scholar, esp. of Cicero and Virgil. After he returned to Avignon (1327) he met Laura, who was to become his inspiration. Her identity is unknown. He is remembered for his lyrics, esp. sonnets.

PETREL

Oceanic birds of powerful flight with prominent tubular nostrils. The Fulmar (*Fulmarus glacialis*), 19 in. long, is resident chiefly on N. coast of the Brit. Is. The Storm-petrel or Mother Carey's Chicken (*Hydrobates pelagicus*), 6 in. long, breeds locally on islets off W. and N. coasts of Brit. from the Shetlands to the Scillies.

PETRIE, Sir W. M. Flinders

(1853-1942) Eng. Egyptologist. His work included the unearthing of important papyri in the Fayum (1888-9), and the investigation of the city of Lachish (1890) and Naucratis.

PETROLEUM

Mineral oil whose formation is believed to have begun as early as 400 million years ago and whose source material was marine animal and plant life remains that were buried, prior to decomposition, in the mud of ocean beds. Subsequent pressures converted the mud into rock, while chemical reaction converted the organic remains into crude oil. In certain places where non-porous rock halted the oil's percolation, the mineral accumulated to form an oilfield. Chief oil-producing areas of the world are N. Amer., the Caribbean, the M.E., the Caspian-Volga-Ural districts of Russia, Indonesia and Borneo. Major oil-producing countries include the U.S.A., Venezuela, Kuwait, Saudi Arabia, Iraq, Persia, Canada, and

Mexico. Total world crude oil production (including natural gasoline) in 1955 was 795,300,000 metric t., figures for 1962 showing that the 1,200 million t. mark was clearly exceeded, and the oil industry is planning to meet an eventual world oil demand in excess of 1,500 million metric t. annually. Sea transportation of oil has become one of the most important tasks of the world's mercantile marine: oil tankers now comprise over one-fifth of all merchant tonnage in service. Research and improved refining techniques have broadened the range of finished petroleum products now in everyday domestic and industrial use. U.K. annual refining capacity is now of the order of 30 million metric t. Of great importance to industry generally has been the post-war development of petroleum-chemical production. These chemicals enter into the manufacture of synthetic detergents, artificial textiles, plastics, insecticides, medicines, drugs and toilet requisites, kitchen-ware and motor tyres. Chief finished petroleum derivatives are gasolines (petrols), kerosenes (paraffins and vaporising oils), gas oils and diesel oils, lubricating oils, paraffin waxes, heavy fuel oils and bitumens.

PLITTY SESSIONS

In the sitting of a court of summary jurisdiction. It consists of 2 or more justices of the peace or of a stipendiary magistrate. Such a court can deal summarily with numerous offences, but its powers of punishment are restricted.

PETUNIA

Genus of perennial ornamental herbs of the deadly nightshade family, chiefly *S. Amer.*

PEWTER

Alloy of lead and tin used for making flagons, jugs, plates, etc. The common metal consists of 80% tin and 20% lead, but the finest pewter is mostly tin.

PHARISEE

Religious party among the Jews originating in the Maccabean age. Their teaching upheld the precise observance of the Mosaic law, both canonical and traditional; they believed in the resurrection of the body and the existence of angels.

PHARMACY

Art of preparing drugs and medicines. Now has a scientific background as the action of most drugs has been investigated by experiment. The science of pharmacy is controlled by the Pharmaceutical Soc., establd. in 1841, which is also responsible for the exam. and granting of a certificate, to all pharmaceutical chemists under the Pharmacy Act.

PHAROS

Small ls. off the N. coast of Egypt, near Alexandria, on which stood the lighthouse, erected by Ptolemy I, 260 B.C. It was one of the Seven Wonders of the World.

PHARYNX

[fa-rinks] Cavity at back of mouth extending above from back of nose to opening of the oesophagus and the larynx below. The eustachian tubes open into it.

PHEASANT

(*Phasianus*) Game bird, with short, slightly-curved bill, short wings and long tail. Introduced to Brit. from the Caucasus, the common *P. colchicus* is now distributed in all parts of the country except the Shetlands and Orkneys. They are preserved. The shooting season lasts from Oct. 1 to Feb. 1.

PHILADELPHIA

Largest city of Pennsylvania, U.S.A., on the Delaware, c. 100 m. from the sea. It is a great industrial and educ. centre. Founded by Wm. Penn, 1682. There is a univ. Industries include textiles, tanning, chemicals and food prepara-

tion. The 'Declaration of Indep.' was signed in P. 1776. Pop. 2,003,000.

PHILATELY

The study of postage stamps. This originated in Fr. in 1862, i.e. 22 yrs. after the introduction of the penny post in Brit. There is an abundance of lit. on stamp-collecting, and clubs or societies have been formed in most cities of the world.

PHILIP

Name of 6 kings of Fr. **Philip II** (Philip Augustus, 1165-1223) establd a strong monarchy. He took from the Eng. kings the greater part of their lands in Fr. and secured his possession by victory over the combined forces of John and the Emperor Otto IV at Bouvines in 1214. **Philip IV** (1268-1314) was involved in a struggle with Pope Boniface VIII, in which he gained the victory, again strengthening the authority of the Crown. In the reign of **Philip VI** (1328-50) the Hundred Years' War with Eng. began.

PHILIP

Name of 5 kings of Spain, of whom the most important was **Philip II** (1527-98) who succeeded his father, the Emperor Charles V (q.v.) in 1556. His 2nd wife was Mary, Queen of Eng. An ardent Catholic, his aim was to restore the supremacy of the Ch., overthrown by the Reformation. He carried on a long struggle with Elizabeth of Eng.

PHILIP, Prince

Duke of Edinburgh (1921-) B. Corfu. Great-great-grandson of Queen Victoria. Spent early life at home of his uncle, Earl Mountbatten, in Hants. Served with distinction in R.N. during World War II. Became Brit. citizen, Feb. 1947. Married H.R.H. Princess Elizabeth, Nov. 20, 1947, being previously created Duke of Edinburgh. A son, Charles, Prince of Wales, Duke of Cornwall, was b. 1948, and a daughter, Princess Anne, in 1950. A 2nd son, Prince Andrew, was b. 1960 and a 3rd, Prince Edward, in 1964. In Feb. 1957, the Queen conferred the title of Prince on the Duke of Edinburgh.

PHILIP of Macedon

(382-336 B.C.) King of Macedonia. He made himself ruler of the whole of Greece. Against his ambitious designs the Athenian orator, Demosthenes (q.v.), directed his famous *Philippic* orations. He laid the foundations for the conquests of his son, Alexander.

PHILIPPI

City of E. Macedonia founded by Philip of Macedon, where Octavian and Antony defeated Brutus and Cassius, 42 B.C. St. Paul founded a ch. at P. *Philippian Epistle to the N.T.* book comprising the last letter of St. Paul now extant. Its authenticity is fully establd.

PHILIPPINES

Repub. of Asia, a group of Is. N.E. of Borneo between the S. China Sea and the Pacific. The largest Is. are Luzon, Mindanao, Samar, Negros, Palawan, Panay, Mindoro, Leyte, Cebu, Bohol and Masbate. Other Is. number more than 7,000. They are mountainous and there are several volcanoes. The principal exports are coconut products, sugar, lumber and timber, tobacco and Manila hemp. Manila, on the W. coast of Luzon, is the most important city. A new cap., Quezon City, has been built N.E. of Manila. The inhabitants, Filipinos, are predominantly Malay, with Sp. and Chinese mixture in some areas. The Is. were discovered, 1521, by the Portuguese (Magellan), and conquered by the Sp. in the later 16th cent. The Is. remained a Sp. possession until 1898, when they were ceded to the U.S.A. Invaded and overrun by the Japanese, 1942, the Philippines were subject to heavy fighting. Following the re-conquest by Amer. forces under Gen. MacArthur, an indep. repub. was establd. 1946. Area: 115,000 sq.m. Pop. 27,088,000.

PHILISTINES

Ancient people occupying the Palestine coastlands S. of Joppa. Their confederacy came into conflict with Israel under Samson, Samuel and David.

PHLOX

Genus of herbs, mostly perennials, allied to Jacob's Ladder, of N. Amer. origin. Many garden forms have come from the perennial *P. paniculata* and *P. maculata*, and the dwarf moss-pink, *P. sabulata*.

PHNOM PENH

Cap. of Cambodia, on the Mekong, S. of Tonle Sap. Pop. 550,000.

PHOENICIA

[fi-nēsh-i] Strip of coastland between the mts. of Lebanon and the Medit. The Phoenicians founded Carthage (q.v.). Tyre and Sidon were their principal cities, and the Tyrian purple, a rich dye, one of their main objects of commerce. They penetrated as far as Cornwall and the Scilly Isles. Tyre fell to Alexander the Gr., 332 B.C., and ended Phoenician power. Phoenician, W. Semitic (Canaanite) language spoken in ancient Tyre and diffused along N. African coast. The Phoenician alphabet is the ancestor of those used by most Indo-European and Semitic languages.

PHOENIX

[fē-i] Fabulous bird. According to Ovid, when it has lived 500 years it builds a nest. This it ignites and so dies. From the body of the parent a young Phoenix issues forth.

PHONETICS

Study of speech-sounds. The human voice, inarticulate or articulate, results from the passage of air through the larynx. Modified by the vibrating vocal cords and the relation of the mouth-parts to the mouth and nose-cavities, the volume and resonance of the sounds produced are determined by physiological principles.

PHOSPHATES

Compounds of phosphoric acid and various bases. In commerce it means, chiefly, phosphates of lime, occurring as mineral deposits and used as fertiliser. The impure massive form of the mineral apatite known as phosphorite consists of calcium phosphate, fluoride and chloride, and is an important source of phosphates.

PHOSPHORESCENCE

Power possessed by certain animals, minerals and plants of emitting light. It occurs in the glow worm, firefly and many marine creatures, esp. the deep sea fauna. The phosphorescence of the sea is often due to swarms of minute protozoa (*Noctiluca*).

PHOSPHORUS

An element which forms 0.12 % of the earth's crust, chiefly in the form of phosphates and is an essential constituent of all living cells. It was discovered by Brandt in 1669 and occurs in 3 forms—yellow, red and black. Yellow phosphorus is the base of many rat poisons. Black phosphorus is obtained from the red variety under high pressure at a temp. of 200° C. During the last 40 years the industrial applications of phosphorus and its derivatives have greatly increased. Sp. gr. 1.8 (yellow), 2.2 (red), 2.8 (black). Chem. sym. P.

PHOTO-FINISH

Method of determining the winner of a race. On a racecourse a ray is projected between the judges' box and the finishing post, and received in a photo-electric cell. The interruption of the ray opens the shutter of a cine-camera and a photograph is taken.

PHOTOGRAPHY

Reproduction in permanent form of an optical image. Stages in the process are as follows:—

(1) **Exposure:** a plate or film, coated with an emulsion of silver bromide in a gelatine base, is exposed in a camera to light constituting an image of the scene or object to be photographed. (2) **Development:** the plate is immersed in a solution of chemicals which reduce to silver the bromide in regions where light has fallen, but have no effect on the rest of the emulsion. (3) **Fixing:** the negative is immersed in a solution of hypo (sodium thiosulphate) which removes, as soluble compounds, the unexposed silver bromide, leaving clear patches between the black silver areas. (4) **Printing:** the negative formed by these processes is now placed in contact with a sheet of paper bearing silver bromide emulsion and 1, 2 and 3 are repeated, producing finally (on the paper) a representation of the orig. scene. In *Colour photography* it is necessary to superimpose 3 photographs, corresponding to the blue, green and red components of the orig. scene. This may be done by using a film which has the red, green and blue filters permanently attached to it as a regular grid of colour dots in front of the silver bromide layer. If the dots are very small, examination of the negative, or of a positive made from it on the same material, will show a coloured image.

PHYLLOXERA

Insects belonging to the family of Aphides or Plant-lice. *Phylloxera vastatrix*, a native of N. Amer., is the most dreaded insect pest of the grape vine. It appeared in Fr. c. 1860 and spread over Europe, ruining the vineyards. See **APHIS**.

PHYSICIAN

Person who specialises in the science of medicine and who, in addition to his ordinary degrees, has obtained the higher degree of Doctor of Medicine (M.D.), or the diploma of Membership of the Royal Coll. of Physicians (M.R.C.P.). Doctors who are accepted as eminent physicians are elected as Fellows of the Royal Coll. of Physicians (F.R.C.P.). The Coll. was estab. in the 16th cent.

PHYSICS

(or **Natural Philosophy**) The science which deals with the study of natural phenomena, their causes and effects, and the laws and forces governing them. Its branches include heat, light, sound, electricity, magnetism and parts of mechanics.

PHYSIOTHERAPY

The treatment of disease and injury by physical means instead of drugs or surgery. Methods employed include massage, exercise, and the application of heat rays and various forms of electricity.

PI

(π) A number which occurs in many branches of mathematics, e.g. it is the ratio of circumference to diameter of a circle. Value 3.1416.

PIANOFORTE

A keyboard instrument in which the strings are struck by felt-covered hammers when the keys are depressed. The pianoforte has 2, sometimes 3, pedals. The right pedal raises all the dampers, so allowing the sound to continue after the key is released. The left pedal shifts the keyboard action so that the hammers now strike 2 instead of 3 strings tuned to each note and, in lower part of the instrument, 1 instead of 2; this is the case on the horizontal ('grand') piano; on an upright, the depression of this pedal brings the hammers closer to the strings.

PICARDY

Prov. of Fr. before the Rev. now comprising the dept. of Somme and portions of Aisne, Oise and Pas de Calais. Its principal city was Amiens, on the Somme. The prov. was annexed to the crown of Fr., 1477.

PICASSO

[pi-ká'-sô] (1881-) Name taken by Pablo Ruiz, Sp. painter. B. Málaga, he came to Paris and was assoc. with Braque (1906-12) becoming known for his cubist works. Later the abstract nature of his paintings aroused much controversy, which still continues.

PICCOLO

A small flute c. 2 ft. long with similar shape and technique to the ordinary flute, and a compass extending an octave higher.

PICTS

People occupying E. Scot. from pre-Rom. times onwards. First mentioned in Constantius Chlorus' campaigns, 296 and 306, their subsequent incursions S. of Hadrian's Wall helped the Scots to harass the Romans.

PIEDMONT

Region of N. Italy, bordered on the W. and N. by Fr. and Switzerland, with the Apennines to the S. The Po and its tributaries water the fertile land which produces fruit, olives, rice and wine. Turin is the cap. It became part of the Ital. kingdom in 1859.

PIETERMARITZBURG

[pieter-ma-rits-'b] Cap. of Natal, S. Africa, 40 m. N.W. of the port of Durban. Founded by the Boers, 1839. Pop. 92,236.

PIG

Mammal belonging to the family Suidae, order Artiodactyla. The group comprises, besides the true pig, the Wild-hog, Bush Pig and Babirusa. Domesticated pigs are derived from the Wild Boar *Sus scrofa*. Principal Brit. breeds include the Large White, Landrace, Wessex, Essex, Tamworth, Large Black, Lincoln and Berkshire.

PIGEON

In general, all birds belonging to the order Columbiformes (true Pigeons, Doves and certain extinct birds, e.g. the Dodo). In its more limited meaning the name is given to members of the genus *Columba* representing c. 70 species of Pigeons. Widely distributed over all but the coldest regions, the genus is particularly numerous in Australia, Malay Archipelago, New Guinea and adjacent Is. Brit. species include the Wood Pigeon, Stock Dove, Blue Rock and various domesticated birds.

PIKE

Freshwater fishes inhabiting N. temp. regions. The Common P. *Esox lucius*, of Brit. and Europe, prefers lakes and sluggish reaches. Its long compressed body, up to 30 lb. and more, is covered with small scales. It is an exceptionally voracious species.

PILATE, Pontius

Rom. procurator of Judea, Samaria and Idumea, under whom Christ suffered crucifixion. His attitude during the trial of Jesus has in all ages been variously interpreted.

PILCHARD

(*Sardina pilchardus*) An abundant marine food fish related to the herring, in the Medit. and Atlantic coasts of N. Europe to the Eng. Channel. The Sardines of the W. coast of Fr. 5-7½ in. long, are immature fish of the same stock.

PILEWORT See CELANDINE.

PILGRIM

One who, from religious motives, journeys to a place held sacred. Christian pilgrimage, esp. to Palestine, developed after Constantine. Medieval Europe also fostered visiting the tombs of saints, as those in Rome, St. James of Compostela, Becket at Canterbury; while curative pilgrimages are still made to Lourdes. **Pilgrim Fathers.** Specifically the first company of emigrants who sailed from Plymouth, Devon, in the *Mayflower*, reaching Plymouth Rock, Mass., 1620.

PILOT

One who navigates a ship or controls an aircraft. A licensed pilot is employed to navigate a ship into or out of a port or harbour, through a river, channel or road. When a vessel wishes to enter, e.g. a port, a recognised signal is made and a local pilot goes out to board the vessel for the purpose. The master or mate, however, may be a qualified pilot. Licensing is carried out by the local chief officer of customs. Pilots of aircraft are certificated after completing specified training and passing tests.

PLAGUE

Specific infective disease caused by *bacillus pestis* carried by rat fleas and characterised by sudden onset with headache, backache, high fever, enlarged glands, haemorrhages from skin, lungs and stomach. A severe and prolonged illness with high mortality. Cycles of the disease include the famous Black Death epidemic which occurred in the 14th cent.

PLAICE

(*Pleuronectes platessa*) Marine food fish inhabiting N. European waters, from Iceland to S. of Brit. Allied to the Dab and Flounder, but orange-spotted. It may attain 8-10 lb., measuring 30 in. or more. See FIAT FISH.

PLANCK, P.

(1858-1947) German physicist. Awarded Nobel prize for physics for his Law of Radiation, 1918; F.R.S. 1926; from 1930 Pres. of Kaiser Wilhelm Institute. Achieved universal fame as originator of Quantum Theory which laid the foundations of the modern theory of atomic processes. Unlike the charge of the electron, the unit of radiant energy is different for every wavelength on which it is emitted. Planck worked out these fundamental new relationships in terms of a universal constant, now called Planck's Constant.

PLANE

Genus of large trees (*Platanus*), natives of N. temp. regions. They have large deciduous palm-shaped leaves and smooth, whitish bark, scaling off annually in patches. The W. plane or buttonwood, N. Amer.'s tallest deciduous forest-tree, reached Stuart Eng. The London Plane, *P. acerifolia*, is a hybridised derivative.

PLANET See SOLAR SYSTEM.

PLANKTON

Microscopic floating animal and plant life of the sea, rivers and lakes. In temp. seas there are commonly 2 seasonal outbursts.

PLANTAGENET

Surname applied to the Angevin kings of Eng. The house included Henry II, Richard I, John, Henry III, Edward I, II, III, Richard II, Henry IV, V, VI, Edward IV, V and Richard III. At the d. of Richard II the house of Plantagenet became divided into the branches of Lancaster and York, so that the line may be regarded as ending with his d. in 1399. PLASTICS

A group of materials. There are 2 principal divisions (1) *thermoplastic materials*, which can be softened by heating and remoulded repeatedly; (2) *thermosetting plastics*, which undergo chem. changes during the heating and forming process and cannot be resoftened by heating. This group includes bakelite. Thermoplastics are of 2 main types: (1) the *cellulose derivatives*, including celluloid, cellulose acetate, cellophane and rayon (artificial silk); (2) the *polymers*, consisting of organic substances with molecules in the form of long chains which are formed by the repetition of smaller groups of atoms. Among these are polystyrene, polyethylene (or polythene), polyvinyl chloride and methyl methacrylate (perspex).

PLATINUM

White metal, widely used for electrical contacts where its freedom from corrosion is important. It was discovered by Wood in 1741.

PLATO

**PLOVER**

[pluv'-er] Widely-distributed family of birds which are typically Waders. Brit. species include the Lapwing, Ringed Plover, Golden Plover, Dotterel, Avocet, Turnstone, Stilt, Oyster Catcher, etc.

PLUM

Fruit of the cultivated plum-tree. Derived from one or more species of *Prunus*, of the Rosaceae, the main European varieties originated from the wild plum, *P. domestica*, including the Victoria, Magnum Bonum and Greengage. A Japanese species furnished not only Japanese and Californian but also S. African varieties. See GREENGAGE; PRUNE.

PLUTARCH

(46-120) Gk. biographer. After travels in Greece and Egypt, he opened a school at Rome. He is notable for his parallel biogs. of eminent Gks. and Roms. Sir T. North's tr. (1579-95) was popular in Elizabethan Eng. and is the source of Shakespeare's Rom. plays.

PLUTO

The 9th known planet in order of distance from the sun (c. 3,670,000,000 m.); it was discovered in 1930 at Lowell Observatory, Arizona. The diameter of the planet is c. 3,650 m. and it takes c. 247 yrs. 255 days to make one revolution round the sun.

PLUTONIUM

One of the elements made for the first time during work on the atomic bomb. If uranium 238 is bombarded by neutrons it changes into uranium 239, and then into unstable neptunium 239, and finally into plutonium 239. See NUCLEAR POWER, NEUTRON.

PLYMOUTH

[plim'-uth] City, county borough and seaport of S. Devon, on P. Sound at the mouth of the Plym. It includes Devonport and Stonehouse, and is an important port. Devonport is a naval station, with dockyards and barracks. There is a large fishing industry. The Pilgrim Fathers sailed from P. in the *Mayflower* in the 17th cent. It returns 2 members to Parl. Pop. 209,900.

PLYMOUTH

Hon. title for the Jewish scribes after Herod's day. Applied to learned persons, the N.T. mentions Christ as so addressed by his disciples and the common people. It designates modern Jewish clergy.

RABBIT
(*Oryctolagus cuniculus*) A burrowing rodent. The wild form is smaller, greyer and less speedy than the Hare, to which it is allied, and breeds abundantly. Naturalised in Brit. and elsewhere, notably in Australia, it is useful for food, its fur being felted for hats and, disguised as Coney, used by furriers. Game-laws regulate rabbit-shooting. See MYXOMATOSIS.

RABELAIS, François
(1483-1553) Fr. writer. B. Chlnon; was successively a monk, a teacher at Montpellier, and a priest. He wrote *Gargantua et Pantagruel* (1532-4) a huge comic narrative.

RABIES
or **Hydrophobia**. An acute fatal disease of the nervous system characterised by convulsions, and later paralysis of all muscles. Caused by a virus transmitted to man through the saliva of an infected animal, such as dog, fox or wolf. Pasteur introduced a vaccine capable of curing the dis.

RACCOON
(*Procyon*) Amer. carnivorous mammals related to the oriental Pandas. The common grey N. Amer. tree-dwelling 'Coon', *P. lotor*, 24 in.

long with 10-in. ringed tail, feeds by night, habitually dipping its prey into water before eating.

RACHEL, Elizabeth Rachel Felix
[ra-'shel] (1821-58) Fr. tragedienne of Jewish extraction. On June 12, 1838, she appeared at the Théâtre Français. Soon she became the greatest tragic actress of her day.

RACHMANINOV, Sergei Vassilievitch
[rach-man'-i-nof] (1873-1943) Russ. pianist and composer. He toured widely in Europe and Amer. He left Russia in 1917 and lived mainly in Amer. He wrote music of all kinds.

RACINE, Jean Baptiste
[ra-'sen] (1639-99) Fr. dramatist. After making the acquaintance of Boileau and Molière, he began to write for the stage. Plays include *Andromaque*, *Les Plaideurs* (1668), *Britannicus* (1669), *Bérénice* (1670), *Iphigénie* (1674) and *Phèdre* (1677). He retired from the theatre for 12 years, until, at the request of Madame de Maintenon he wrote *Esther* (1689), and *Athalie* (1691).

RACKETS
Ball game played on, walled-in courts. The game consists in hitting the ball against the end wall, above a certain line, with the racket.

RADAR
A process of determining the position of distant objects by radio waves. Radar stands for *Radio Direction And Range*. In 1935, Sir Robert Watson-Watt and a team of Brit. scientists began work on the adaptation of radio-location to milit. purposes. In 1939 Brit. already had stations estab'd for the detection of aircraft and development went on throughout World War II. The apparatus consists of a transmitter and receiver. The energy transmitted by the former is reflected back to its starting point as a luminous 'response' on a cathode-ray oscilloscope. Long Range Navigation ('Loran') employs long radio waves and a similar principle has been applied to weather prediction and the location of fish.

RADHAKRISHNAN, Sir Sarvepalli
[ra-da-krish'-nan] (1888-) Vice-Pres. of the Republic of India 1952-62, Pres. 1962. He was Spalding Prof. of E. Religions and Ethics at Oxford, 1936-52. From 1946-52 he was leader of the Indian Delegation to U.N.E.S.C.O. and Pres. of the General Conference, 1952-4. In 1949 he was apptd Indian ambassador to the U.S.S.R., a post which he relinquished in 1952 to become Vice-Pres. of India. Knighted in 1931. O.M. 1963.

RADIANT HEAT
(or **Infra-Red Rays**) Heat which is produced artificially from electric light bulbs or electric radiators, and which is used for the relief of chronic rheumatic affections and muscular strains. Radiant heat is composed of infra-red rays which have some penetrative power in the body, causing dilatation of blood-vessels and an increase of blood-supply in the part exposed.

RADIATION
A term which embraces electro-magnetic waves, in particular X-rays and gamma rays as well as streams of fast moving charged particles such as electrons, protons, mecons, neutrons, i.e. all

the ways in which energy is given off by the atom. Radioactive dust, or fallout, is radioactive material that settles to earth after a nuclear explosion. It takes 2 forms: firstly as local fallout composed of denser particles produced by the explosion, which descend to earth in a short time near the site of the detonation and in an area extending downward for some distance. The other form, world-wide fallout, consists of lighter particles which reach the upper troposphere and stratosphere and are distributed by the winds over a wide area of the earth, coming to rest eventually through the action of rain and snow. **Radiation sickness.** Small doses of radiation produce no immediate visible effects. Long-term effects (such as genetic damage or leukemia) are not yet fully understood. Exposure to large amounts of radiation (e.g. after an atomic bomb explosion or nuclear accident) produces radiation sickness characterised by nausea, vomiting and diarrhoea and a fall in the number of white blood cells. Later stages may include anaemia, loss of appetite and fever.

RADIO ASTRONOMY

Research into this aspect of astronomical science resulted from enquiries into the origin of the short-wave radio noise which reaches us from space. The strength of radio waves from different parts of our own galaxy (the Milky Way), was mapped in detail and it was discovered that it came not from the shining stars, but from dark stars. These dark stars may be clouds of hydrogen which are slowly becoming light stars, alternatively they may be burnt-out light stars which have collapsed to dwarfs. Their emissions are studied by means of Radio Telescope. See ASTRONOMY.

RADIO COMMUNICATION

The basic principle of radio communication is that the passage of alternating current through a conductor causes a loss of energy as electromagnetic radiation from the wire. The electromagnetic, or radio wave, travelling with the speed of light (c. 186,000 miles per sec in air) induces, in any conductor placed in its path, an alt current similar to that which originally flowed in the transmitting aerial. This current may be amplified and made perceptible by the use of an appropriate receiver.

RADIOACTIVE ISOTOPES

Those of chemical elements exist naturally, but many more can now be made artificially either by bombardment of material by sub-nuclear particles in a nuclear reactor or by means of a particle accelerator. In such isotopes the atoms are unstable and disintegrate at variously differing rates during which process energy is released in the form of radiation. In medicine, the isotope of iodine can be used to determine the concentration of iodine in the thyroid gland. Medical instruments can be sterilised by exposing them to bacteria-killing radiation from radio-active cobalt. In industry many automatic processes, such as control of thickness of material by recording the attenuation of radiation passing through it, can be carried out by the use of radioisotopes. The manufacture of radioisotopes is carried out by the Atomic Energy Authority at the Radiochemical Centre, Amersham, Bucks., while research into their application is undertaken at the Isotope Research Division, Wantage, Berks.

RADIOACTIVITY

Spontaneous and uncontrollable breaking up of the nucleus, which occurs principally in a number of heavy elements occupying positions from 82 and upwards in the periodic table. The breaking up is followed by emanation of 3 kinds (1) *alpha rays* which are streams of alpha particles (helium nuclei), (2) *beta rays*, which are streams of electrons, (3) *gamma rays*, which are an electromagnetic radiation of very short

wavelength—next below X-rays. See RADIUM; RUTHERFORD, ERNEST; NEUTRON.

RADIOLOGY

Study and use of X-rays in medicine. In 1895 Rontgen discovered that X-rays passing through human tissues could be used photographically to differentiate between easily penetrable tissues and bone.

RADISH

(*Raphanus*) Genus of annual or biennial cruciferous herbs, natives of Europe and temperate Asia. The garden radish, *R. sativus*, has an agreeably pungent fleshy root, olive-shaped or turnip-shaped, usually whitish or reddish, and is eaten uncooked as salad.

RADIUM

Radioactive element having chem sym Ra and at. wt. 226.05, discovered in 1898 by Madame Curie. It is present in pitchblende, carnotite and other ores assoc with uranium, from which it is derived by radioactive decay. Radium compounds are used extensively in surgery in the treatment of certain diseases.

RADNORSHIRE

Inland county of Wales; rising to 2,180 ft. in Radnor Forest. The chief river is the Wye. Farming is important. Sheep rearing in particular. Presteigne is the county town. With Brecknock, R. returns 1 member to Parl. Pop. 18,000.

RAEBURN, Sir Henry

(1756-1823) Scots portrait painter. He taught himself to paint, and was helped by David Martin, a leading Edinburgh portrait painter.

RAGGED ROBIN

Perennial crimson-flowered wild plant (*Lychnis flos-cuculi*) of the pink family. It is a slender herb growing c. 1½ ft. high and common in Brit.

RAGLAN, Lord

Fitzroy James Henry Somerset (1788-1855) Brit soldier. As C.-in-C. in the Crimean War, he was unjustly blamed for the soldiers' privations in 1854-5.

RAGWORT

A perennial composite herb (*Senecio jacobaea*). The stems 1-4 ft. high, with much-divided leaves, bear dense clusters of bright-yellow flower heads.

RAHMAN PUTRA Tunku Abdul

(1923) Malaysian sultan. Leader of Malaya Alliance Party, 1951. M. of Malaya, 1957-63. Prime mover in creation of Malaysia, 1963, and first P.M. Has stood firm in face of Indonesian threats.

RAIKES, Robert

(1735-1811) Founder of Sunday Schools. B. Gloucester. In 1780 he started a Sun. School, which taught the poor children of the town to read and to learn the catechism.

RAIL

Name orig. denoting 2 related birds, Land-rail and Water-rail, now extended to all members of a numerous and cosmopolitan family. The common European Water-rail (*Rallus aquaticus*) 1½ in long, short-tailed and long-legged, is distinguishable by its long bill, and black and white barred flanks. The Land-rail or Corncrake (*Crex crex*) is a summer resident in most parts of the Brit. Is.; wedge-shaped, short-billed, with yellowish brown upper parts and pale barred flanks.

RAILWAY

Permanent way, on which locomotives and the rolling stock drawn by them can travel. The power employed is either steam, electricity or diesel oil. The first railways were rough constructions designed for carrying coal wagons drawn by horses or ponies. The invention of steam, 1804, made it possible for the steam locomotive to replace the horse. The first rail-

way line was opened between Stockton and Darlington in 1825. Accommodation for passengers passed from rude open wagons to comfortable carriages, with dining, sleeping and other facilities. In the great cities, overhead and underground railways were made. In Brit. the large number of railway Cos. that arose in the 19th cent. was gradually reduced, leaving the Midland, Gt. Western, Gt. Northern, and Gt. Eastern. Scot. had the Caledonian, Glasgow and S. Western, N. British and others. In 1921, c. 250 separate Cos. were welded into 4 systems: London, Midland, Scottish, 7,464 m.; Gt. Western, 3,765 m.; London and N.E., 6,464 m.; and Southern, 2,129 m. In 1948 these were nationalised and became known as *British Railways*, divided into 6 Regions.

RAIN

Fall of condensed atmospheric vapour in drops of water owing to the lowering of the temp. below dew-point. Condensation first forms minute drops which float in masses as cloud, and as the process continues these drops coalesce, forming larger drops, whose weight causes them to fall as rain. Rain-making. Production of rain by mechanical or other means. There is now definite evidence that under suitable conditions cloud-seeding does produce rain. Rainbow. Coloured arch seen in the sky away from the sun when rain is falling during sunshine. It is due to the reflection and refraction of light in the raindrops, causing the breaking-up of the white light into the 7 colours of the spectrum.

RALEIGH, Sir Walter

[raw'-li] (c. 1552-1618) Elizabethan explorer and writer. He became a favourite of Queen Elizabeth and in 1584 founded the new colony of Virginia. In 1596 his advice gained Eng. the triumph of Cadiz. Raleigh was condemned to d. for treason, but was instead imprisoned in the Tower, where he wrote his *History of the World*. In 1616 he made a disastrous expedition to the Orinoco in search of gold, and on his return was condemned to d. on the old charge, and beheaded.

RAMADAN

Ninth month of the Mohammedan year, invested with special sanctity by the Koran and observed by faithful Moslems as a period of fasting.

RAMEAU, Jean Philippe

[ram-'s] (1683-1764) Fr. composer and theorist. Wrote an important *Traité de l'harmonie*. In 1722 he moved to Paris and establd. himself as a successful composer of operas.

RAMESES

[ram-'i-sēz] Gk. form of name of 11 kings of the 19th and 20th Egyptian dynasties. The most famous was Rameses II called the Great, who reigned 1558-1491 B.C. A prolific builder: he was responsible for the temple of Abu Simbel and the Ramesseum at Thebes.

RAMIE

Name of Malay origin for the bast fibre of a stingless nettle (*Boehmeria tenacissima*), called in Assam *tha*. This is a variety of *B. nivea*, the source of China-grass. Now grows in the S. parts of Africa, Fr., Eng. and U.S.A.

RAMILLIES

[ram-'i-lēz] Village of Belg., 13 m. N. of Namur, famous for the battle, May 23, 1706, when Marlborough defeated the Fr. in the War of the Sp. Succession.

RAMPION

Name of several perennial herbs of the bellflower family, natives of Europe and W. Asia. (1) The genus *Phyteuma* includes the Brit. *P. spicatum*. (2) *Campanula rapunculus*, also Brit. has a spindle-shaped fleshy root.

RAMSAY, Allan

(1686-1758) Scot. poet. *The Gentle Shepherd*

1725, and *Fables*, are his chief works. He ed. *Evergreen* (old songs), 1724. His son Allan (1713-84) was appointed portrait-painter to George III in 1767.

RAMSAY, Sir Bertram

(1883-1945) Brit. Admiral. Entered R.N. 1898, retired 1938, but rejoined at the commencement of World War II. He organised the Allied landings in N. Africa, Sicily, Italy and Normandy. He organised the evacuation from Dunkirk.

RAMSAY, Sir William

(1852-1916) Scot. chemist. In 1895 he obtained helium for the first time.

RANDALL, John Turton

F.R.S. (1905-) Was responsible for the development of many of the successful applications of radar during World War II. Prof. of Biophysics, King's Coll. 1961.

RANGOON

Cap and principal seaport of Burma on the R. River, c. 20 m. from the Gulf of Martaban. The principal building is the Shwe Dagon Pagoda. Pop. 740,000.

RANJITSINGHI, Kumar Shri

(1872-1935) Indian prince, and a cricketer. In 1895 he settled in Sussex and began to play cricket for that county. He played for Eng. against Australia. In 1906 Ranji became Maharajah of Nawanagar.

RANKL, Karl

(1898-) Austrian conductor and composer. Educ. Vienna. Came to Brit. following Nazi occupation of Czechoslovakia. Musical Director, Covent Garden, 1946-51. Principal Conductor, Scottish Nat. Orchestra, 1952-7.

RAPE

In law, the crime of having carnal knowledge of a woman by force, against her will. Since 1861 has been punishable in Eng. by penal servitude (since 1949, imprisonment), for life.

RAPE

Cultivated varieties of several cruciferous herbs of the cabbage genus, notably *Brassica napus* and *B. campestris*. They are grown extensively in Europe and India for green forage; the seeds, used for feeding poultry, yield an oil, known commercially as colza.

RAPHAEL SANZIO

[raf-'a-el sant-'sio] Ital. painter (1483-1520). B. Urbino. His work falls into 3 periods: (1) *Perugian* (1500-4), during which he worked in co-operation with Perugino; (2) *Florentine* (1504-8), when he came under the influence of Leonardo da Vinci and Michelangelo; (3) *Roman* (1508-20) during which he decorated the state apartments in the Vatican for Pope Julius II.

RAPHIA PALM

Genus of palm-trees indigenous to trop. Africa and Amer. Important species are the Amazon jupati palm and the W. African bamboo, or wine-palm, yielding a fermentable sap and a bass.

RASPBERRY

Shrub of the rose family (*Rubus idaeus*). Its perennial stool produces shoots which bear, in the 2nd year, scarlet or yellow fruits. Cultivated varieties are used for dessert, jam, wine, etc. See LOGANBERRY.

RASPUTIN, Gregory Efimovitch

(1872-1916) Russ. monk. In 1904 he left his family, and practised religious exercises, adopting the attitude that it was necessary to sin in order to obtain forgiveness. He appeared at court, and exercised a malign influence on Ch. and Sate, until he was shot d.

RAT

Various rodents, specifically the larger species, of the genus *Mus*. The long-tailed Black rat

(*Mus rattus*), 7 in. long with 8-9 in. tail, of Asiatic origin, which reached 13th cent. Europe, and became estab'd. in Brit., is the progenitor of domesticated forms. Later came the Brown or Norway rat, 8-9 in. long, which swam the Volga, 1727, reached Brit. in E.-Indiamen, c. 1730, and ousted its smaller congener. See MUSQUASH.

RATEL

Genus of burrowing carnivores of the Weasel family (*Mellivora*), inhabiting India and Africa.

RATIONING

Apportioning of a share of supplies, usually of food. During World War I the entire pop. of Brit. was rationed, from June, 1917, in fats, sugar and meat. The Ministry of Food, estab'd. in 1939, was responsible for the maintenance and distribution of food supplies. The rationing introduced in Dec. 1939, included bacon, butter, sugar and subsequently, meat, tea, margarine, jam, cheese, milk, sweets, biscuits and bread.

RATTLESNAKE

(*Crotalus*) Amer. venomous snakes of the Pit Viper sub-family. Measuring 4-8 ft. there are several N. Amer. species; one extends S. of Panama. They produce living young. The rattle comprises several loose-jointed horny pieces attached to the tail's end.

RAVEL, Maurice

[Ravel] (1875-1937) Fr. composer. At the age of 22 his *Pavane pour une Infante defunte* for piano appeared. His first great success came with the ballet *Daphnis et Chloe*, 1909.

RAVEN

(*Corvus corax*) Largest bird of Crow family. Normally 25 in. long, strong-billed, strong-flying, harsh-voiced, with ebony-black bill, legs and plumage. It breeds in hilly districts and rocky coasts in Brit., in Lakeland, Wales, the Pennines and parts of Scot. Easily tamed, it makes an intelligent but thievish pet.

RAVENNA

City of Emilia, N. Italy, 70 m. S. of Venice, famous for its ecclesiastical archit. of 5th to 8th cents. It is one of the oldest Ital. towns. Pop. 115,205.

RAWALPINDI

Temporary cap. of Pakistan on N.W. Frontier, 90 m. S.E. of Peshawar. Pop. 340,775.

RAWSTHORNE, Alan

(1905-) Eng. composer. His first major work was his *Theme and Variations* for two violins, 1938. Since then have appeared *Symphonic Studies* for orchestra, concertos for piano and for violin, a symphony, etc. C.B.E. 1961.

RAY

Flat, cartilaginous fish with broad and fleshy pectoral fins. Of true rays (*Raja*), Brit. forms include the Short-nouted Thornback, the Spotted, Starry and Sandy rays. Allied families include the Electric ray or Torpedo, Sting-ray, Eagle-ray and Ox-ray.

RAZOR SHELL

(or Razor Fish) Sand-burrowing bivalve molluscs with long, narrow, parallel-sided shells.

RAZORBILL

(*Alca torda*) Sea-bird of the Auk family, inhabiting arctic and N. regions. Resident in Brit., 17 in. long, it has a glossy blackish plumage which is white underneath. The massive, deeply-furrowed bill has a hooked tip.

READ, Charles

(1814-84) Eng. novelist and dramatist. He began writing plays in 1850, but it was as a novelist that he achieved fame: e.g. *It is Never Too Late to Mend* (1856), *The Cloister and the Hearth* (1861).

READING

County borough and county town of Berks., 36 m. W. of London, at the confluence of the Kennet and the Thames. Famous for its biscuits and seeds; it is an agricultural and railway centre and has engineering works. The univ. was constituted in 1926. R. returns 2 members to Parl. Pop. 121,420.

RECHABITES

(1) Heb. religious community. They dwelt in tents, and avoided wine, vine-planting and grain-growing (2 Kings, 10). (2) Independent Order of Rechabites, a total abstinence Friendly Soc. founded 1835.

RECORD OFFICE

Public building in London. In it the state papers and other historical documents are kept.

RECORDER

A woodwind instrument. It has a whistle mouthpiece at one end.

RECORDER

In Eng. a judge. Certain cities and towns have the right to hold courts of quarter sessions and to provide over them, a barrister, called a recorder, is appointed.

RECTOR

Lat. word meaning 'ruler'. In the C. of E. a rector is one who holds a living in which all the tithes belong to him. It is also used for the headmaster of some Scot. schools. The title is also held by certain ecclesiastics who are engaged in teaching in the R.C. Church.

RED CROSS

Internat. agency for the alleviation of human suffering, esp. for giving relief to the sick and wounded in time of war. Its origin may be dated from a meeting held at Geneva on Feb. 26, 1863, to discuss suggestions contained in a booklet by Hen. Dunant entitled *Un Souvenir de Solferino*. An internat. conference at Geneva accepted the principle of giving protection in war to the personnel of mil. hospitals and authorised as the symbol of such protection the red cross on a white background. The Internat. Red Cross Committee at Geneva acts as a clearing house for all nat. units.

RED DEER

(*Capreolus*) A large deer widely distributed in temp. Europe, W. Asia and N. Africa. The male, 4 ft. high at the withers, is called a Stag, becoming in the 6th year a Hart; the female is the Hind, the young the Fawn. The male develops finely-branched antlers each breeding season. See DEER.

RED SEA

Inland sea separating N.E. Africa from Arabia. It is c. 1,400 m. in length, from Suez in the N. to the Strait of Bab-el-Mandeb in the S. which connects it with the Ind. Ocean. Its greatest breadth is 250 m. The completion of the Suez Canal in 1869 restored it as a great commercial highway. Area: 169,073 sq. m.

REDMOND, John Edward

(1856-1918) Irish politician. M.P. 1881-1918. Redmond's aim was not separation, but a 'free Ireland within the Empire', and he expressed his abhorrence of the rebellion of April, 1916.

REDPOLL

Song-bird of the Finch family, distinguished by the male's crimson crown and rosy breast. The name applies loosely to the Cock Linnet in summer plumage and to the Mealy R. *Carduelis linaria*, with white-marked wings, a winter visitor to Brit. The Lesser R., *C. cabaret*, is resident.

REDSHANK

(*Tringa totanus*) Brit. shore-bird akin to the Sandpipers and ranging over Europe, Asia and N. Africa. Measuring 11 in. with greyish-brown plumage, whitish beneath, long bright red legs and black-tipped dusky red bill. The slightly larger Spotted R. with more mottled plumage, is a bird of passage in E. Eng.

REDSTART

Song-birds of the Thrush sub-family, natives of Europe, Asia and Africa. The Common European (*Phoenicurus Phoenicurus*) with white forehead and black throat, habitually flirts the chestnut tail; the male, 5½ in. long, has a bright bay breast. The female is brownish with paler underparts. The Black R. (*P. ochrurus*) visits S. Eng. autumnally.

REDWING

(*Turdus musicus*) Small species of Thrush. The male, 8½ in. long, with reddish-orange under wing-coverts and axillaries, is distinguishable from the song-thrush by a white streak over the eye.

REDWOOD

Name of several unrelated trees. The Calif. redwood, *Sequoia sempervirens*, a cone-bearing evergreen growing 130-140 ft. high, with a trunk 8 to 25 ft. across, yields light durable timber much used in Europe. Baltic redwood is the Scots pine.

REED

Various tall perennial water-loving grasses. The common broad-leaved reed, *Phragmites communis*, 6-10 ft. high, abounds in Brit. The sea-reed or marram grass, *Ammophila arenaria*, is extensively planted for binding sand-dunes.

REED

The sound-producing agent of certain woodwind instruments. It consists of a small piece of thin cane fastened at one end with the other end free to vibrate. It may be a single reed fastened to and vibrating against the mouth-piece as in the clarinet and saxophone; or a double-reed, 2 pieces of cane bound together to form the mouthpiece and vibrating against each other, as in the oboe and bassoon. These are *beating reeds*; there are also *free reeds*; in the case of the harmonium, mouth organ and accordion, metal tongues vibrate to and fro through a slot.

REEDBUCK

Several allied African antelopes, esp. *Cervicapra arundinea*. It is 3 ft. high at the shoulders, short-tailed, pale-fawn, orange-tinted on the head, and dingy-white underneath.

REFERENDUM

Method in politics by which the people decide in favour of or against a certain proposal. It has long been used in Switzerland and in the U.S.A. but never as yet in Brit.

REFORMATION, The

Religious and polit. movement in Europe in the 16th cent. which ended in the establishment of the Protestant Chs. Its causes were the abuses prevalent in the R.C. Ch., the new critical spirit, fostered by the Renaissance, and the growing force of nationalistic feeling. In 1517, Martin Luther nailed to the church-door at Wittenberg his famous 95 theses, in which he attacked the sale of indulgences. He resisted attempts made by the Pope to suppress him, and was excommunicated in 1520. His followers received the name of 'Protestant'

from their protest made at the Diet of Spire against a decree which enacted that no change should be made in Ch. practice and doctrine. The name Reformed Churches was given to the bodies estab'd. as a result of the Calvinistic teaching, including the Huguenots in Fr. and the Presbyterian Ch. in Scot. The Counter-Reformation was the attempt of the R.C. Ch. to reform itself in the 16th cent. and to stem the flow of Protestantism, exemplified in the Council of Trent.

REFRIGERATION

Process of artificially lowering the temp. below that of the atmosphere. Quick-freezing, i.e. reducing the temp. to 30° below zero almost instantly, preserves the flavour and vitamins of fruit, vegetables, indefinitely. It is common to chill flesh-foods within 10° F. Flowers, and blood plasma for surgical use, can also be preserved by refrigeration.

REGENT

One who rules on behalf of a sovereign. When a sovereign is a minor, or is insane or in any other way incapable of ruling, it is usual to appoint a regent to act for him.

REGINA

Cap. city of Saskatchewan, Canada, 350 m. W. of Winnipeg. It has an extensive trade in wheat and manufactures agricultural machinery. Pop. 112,141.

REGISTRATION

(1) The official entries in books kept by a registrar of births, marriages and deaths, and also for recording a great variety of other information for the public use. (2) The act of insuring, by paying an extra fee, the safe delivery of letters, articles and luggage.

REGIUS PROFESSOR

The title given at Oxford and Camb. univs. to a prof. appointed to a 'chair' dating back to the time of Henry VIII. In Scot. the term signifies the holder of a professorship created by the Crown.

REGULUS, Marcus Atilius

(d. 250 B.C.) Rom. general. Victorious over the Carthaginians several times, he was defeated by them in 255 B.C. and held in captivity. In 250 B.C., according to tradition, the Carthaginians sent him under parole to sue for peace. He strongly advised the Senate to reject their proposals, and went back to Carthage, where he was put to d.

REINCARNATION

The return of the soul to another physical body after d. The doctrine of progressive rebirth is of very ancient origin, and is a cardinal tenet of Hinduism, Buddhism and theosophy.

REINDEER

(*Cervus* or *Rangifer trandus*) Sole species of deer antlered in both sexes. Standing 4 ft. high at the shoulders, swift-footed, it is brownish-grey, with whitish face and neck; the antlers are more or less palmate. The European form has long been domesticated, esp. by the Lapps, large herds being maintained for their milk, flesh and hides.

REINDEER MOSS

(*Cladonia rangiferina*) A widespread species of lichen, native of Brit. and esp. abundant in high altitudes. Comprising a intermingled mass of much-branched tubular structures, 2-12 in. high, it covers barren plains in Lapland and elsewhere.

REITH, John Charles Walsham, Baron

(1889-) A Scotsman. Qualified as a civil engineer. First Gen. Manager, latterly first Director-Gen. of the B.B.C. During the early years of the B.B.C. he maintained its intellectual and spiritual standards of polit. integrity and independence. Lord Reith was chairman of Imperial Airways (now B.O.A.C.), 1938-40; Min. of Information and of Transport (1940), of Works and Planning, 1940-2; chairman of the Colonial Development Corp., 1950-9.

RELATIVITY

Mathematical theory of the universe first put forward by Einstein in 1905. In it he postulated: (1) that absolute motion has no observable effect upon physical phenomena, i.e. that all physical phenomena are so constituted that it is not possible to observe absolute motion by their means; (2) that the rate of travel of light is the same in all directions at a given place, and its value is constant for all places in the universe, no matter what may be the relative movement of the earth or other system of reference involved. See EINSTEIN.

RELIGION

The term may be said to indicate an attitude of reverence to the Supreme Being, together with the resulting system of behaviour, including worship. Fundamentally religion embraces three ideas, i.e. of the soul, the world and the deity. In primitive cultures, man's religion is centred in nature worship. Objects are regarded as possessing mysterious powers or spirits, which require to be propitiated by worship and sacrifice. Thus arose polytheism. Monotheism is fundamental to Judaism, Islam and Christianity, and the religion of ancient Egypt was rooted in Monotheism.

REMBRANDT

RENT

Payment made for the use of land or buildings, made by the tenant to the landlord, weekly, monthly, quarterly or as arranged. Arrears of rent are recoverable by process of law. A payer of rent is entitled to deduct the income, or property, tax paid by him from the amount handed over to the landlord. In theory rent is fixed by an economic law. It is the amount which one will pay for land that is of greater value than no-rent land as it is called.

REPARATIONS

Payments made in money and kind, esp. by Germany as compensation for the damage done by her troops during World War I. The principle was laid down in the Treaty of Versailles. In 1921, at a conference held in London, the amount was fixed at £6,600,000,000. A payment was made, but the scheme soon proved impossible, and a moratorium was granted to Germany. In 1923 a committee was appointed to inquire into the subject and the Dawes Plan was agreed upon. Payments were regularly made until 1928, when it broke down. Another committee then met and the Young Plan was evolved, fixing the total sum. The economic and financial paralysis of 1930-2 made this plan inoperative, and in 1931 a moratorium of one year was granted to Germany. Before the end of this period Gerny stated that she was unable to meet her liabilities and in 1932 a European conference met at Lausanne to effect a permanent settlement. This decided to abolish reparations. Thereafter the subject lapsed. By the peace treaties of 1947 Italy and the other allies of Germany in World War II were bound to pay substantial reparations.

REPRESENTATION

In politics, to take the place of other persons. Today all civilised countries possess representative institutions, as they are called. Under this system the people, unable, owing to their numbers, to rule themselves directly, elect certain persons to do this for them. These representatives are responsible to those who elect them because the latter can refuse to re-elect them at the end of their term of office. The system arose in Eng. in the M.A. when districts were asked to send men to the county courts to state who owned certain land, or who had committed a certain crime. From this type of representation arose the element of the Commons in Parl. The Fr. Revolution saw the beginning of representative govt. on the Continent, and in the 19th and 20th cents. it has spread widely. The progress has not been unchecked. Authoritarian govts., although retaining representative assemblies, have stripped them of power; examples of this can be seen in Soviet Russia, and formerly in Nazi Germany and Fascist Italy.

REPRESENTATIVES, House of
Name of the lower house of Congress of the U.S.A. and of the Parl. of the Commonwealth of Australia. Shares all legislative powers with Senate (q.v.). All legislation needs its assent. The Austral. House consists of 123 members who are paid salaries and elected for 3 years, or less. It is under a Speaker and resembles the Brit. House of Commons.

REPRODUCTION

Process by which animals perpetuate their own species or race. Reproduction may take place by either or both of 2 chief methods, (1) *Sexual* in which the elements of sex are concerned, since in this process male and female cells are united, and (2) *Asexual* in which no elements of sex are concerned. The sexual process includes (a) *Hermaphrodite* parents possessing male and female organs in the same individual; and (b) *Dioecious* parents which may be Oviparous (e.g. fishes, birds, etc.), Ovo-viviparous (e.g. some amphibians and reptiles), or Viviparous (e.g. mammals). The asexual reproductive process includes the processes of (a) Gemmation or budding, and (b) Fission. See **EMBRYOLOGY**.

REPTILE

Class of vertebrate animals ranking above amphibia and fishes but below birds and mammals. All bear epidermal layers of scales. They are cold-blooded, breathe by lungs, never by gills, and bear eggs, sometimes hatched within the female's body. Except for some tortoises, all are carnivorous. There are 4 orders: (1) lizards and snakes, (2) crocodiles, (3) tortoises, (4) now represented solely by the *Tuatara* of New Zealand. Several other orders, which flourished in the mesozoic age, are extinct. Known only from their fossil remains, they include Dinosaurs, Ichthyosaurs, Plesiosaurs and Pterodactyls.

REPUBLIC

State in which there is no monarchical head. Most of the Gk. states were republics, as was Rome until Augustus. Repubs. were rare from that date until the revolt of the Amer. colonies and the Fr. Revolution, Venice and the United Provs. of the Netherlands being the exceptions. Fr. was a repub. for a short time after the deposition of Louis XVI, and in 1848-52, 1871-1940, 1946-58, and a 5th was constituted in 1958. A number of new ones emerged after World War I, including Germany, Austria, Turkey and in a sense Russia. Spain was added to the number in 1931; India, 1950; Egypt, 1953; the Sudan and Pakistan, 1956; and many of the emergent nations since.

REPUBLICAN

RESURRECTION

Belief in the rising again of the human body. The doctrine of immortality, which is of very ancient origin, was fundamental to the Osirian system in Ancient Egypt and some traces of it are found in the O.T. In modern times ideas about the resurrection can be divided into 4 categories. (1) That the bodies of the dead will be resurrected at the 'last day' when all will be judged according to their deeds, good or bad. Linked with this is the belief based on Christ's teachings and promise as found in the N.T. (2) Many regard the physical body as the 'house' which the soul inhabits on earth. (3) Spiritualists aver that there is a great body of evidence to prove the survival of the personality in a post mortem existence. (4) Rationalists and agnostics hold that faith and dogma are insufficient proof of survival, and that d. brings about the extinction of the individual.

RESURRECTIONISTS

(Body Snatchers) Persons who, during the latter half of the 18th and the first half of the 19th cents., stole newly-buried corpses from graveyards and sold them to teachers of anatomy. Prior to the passing of the first Anatomy Act (1832), this was highly remunerative. The famous case of Burke and Hare brought to light the fact that unscrupulous resurrectionists would not stop at murder to supply corpses.

RETRIEVER

RHEUS FACTOR

[rē'-zus] In 1940, it was found that the red blood cells of 85% of the white population reacted to antibodies that developed in rabbits' blood when rabbits were injected with red cells of rhesus monkeys. Individuals who reacted were regarded as Rh-positive and the remaining 15% Rh-negative. Further research revealed that all human blood contained an Rh factor, the form of which was determined genetically by grouping of a number of genes. When an Rh-negative person is transfused with Rh-positive blood, he may develop antibodies which will cause clotting or breaking of the red cells of subsequent transfusions of Rh-positive blood. An Rh-negative mother may develop similar antibodies in response to an Rh-positive foetus.

RHEUMATISM

ROCK

Mineral aggregate of which the earth's crust is composed. From their origin rocks may be classified into sedimentary, metamorphic and igneous. Sedimentary rocks are usually laid down under water, and may be fragmental, such as conglomerates, sandstones and shales, chem., such as inorganic limestones and beds of rock salt or gypsum, organic, such as the normal fossiliferous limestones and coal seams, or they may be pyroclastic, e.g. volcanic ashes. Metamorphic rocks have undergone alteration by high temps. and pressures, into schists and gneisses. Igneous rocks are those which have solidified from a molten state, or possibly recrystallised from ultra-metamorphism.

ROCKALL

Small Atlantic Is. some 70 ft. high and 83 ft. wide. On Sept. 18, 1955, a party from H.M.S. *Vidua* took possession of the island. The Admiralty announcement of Sept. 21 said: 'A flag-staff was erected on the island, the Union Jack was broken, and a commemorative plaque was cemented to the rock. The annexation of this island was necessary since it is within the sector of the sea which is likely to come within the orbit of the projected guided weapons range in the Hebrides.' Rockall first appeared on maps less than 400 years ago.

ROCKEFELLER, John Davison

(1839-1937) Oil magnate and philanthropist. B. Richford, N.Y., he became, at the age of 50, the richest man in the world. He distributed c. \$600,000,000 of his wealth, most of it for the establishment of: (1) The Rockefeller Institute for Medical Research, 'to conduct, assist and encourage investigations in medicine, surgery and allied subjects.' (2) The Rockefeller Foundation, 'to promote the well-being of mankind throughout the world.' (3) The General Education Board. (4) The Laura Spelman Rockefeller Memorial.

ROCKET

A propulsive system in which thrust is obtained from the rapid expansion of a jet of hot gas through a suitably profiled nozzle. The reaction is obtained solely from the change in momentum of the molecules which constitute the jet as they pass through the nozzle. In no sense does the jet impinge upon the air; indeed, in a vacuum, the absence of back-pressure on the nozzle results in increased thrust and efficiency. Unlike the jet engine, the rocket contains all the material needed to support the combustion which produces the jet. Thus it can function in outer space, where oxygen to support the normal burning of fuel is completely absent. The earliest recorded rockets were fireworks used for pyrotechnic purposes by the Chinese more than 2,000 years ago. By the 12th century the Chinese had evolved warlike missiles with rocket propulsion, and similar devices were used by the native Indian rulers against the British in the 18th cent. and by the British forces early in the 19th cent. By the beginning of the 20th cent. rockets were widely used not only as fireworks but also to carry life-saving lines to ships in distress. During World War II the German and Soviet armies used rocket propelled missiles in an artillery rôle on a large scale, and simple rocket projectiles were widely employed in Britain for anti-aircraft purposes. Of an entirely different nature was the German missile popularly known as V-2. This was a streamlined ballistic shape, 46 ft. long and about 65 in. maximum diameter, provided with four tail fins and propelled by a single-chamber rocket engine developing a sea-level thrust of 60,000 lb. This engine was fed with liquid propellants. The complete missile was arranged to take off vertically and could deliver a 2,230 lb. warhead over a range of about 190 miles. The speed at burnout of the engine was approximately 3,470 m.p.h. A total of 12,000 of these great missiles were manufactured, some 4,300 were launched, roughly half being aimed at London. In all, 1,050 impacted on the city, causing 2,754 deaths. Their modern successors are the ICBMs (inter-continental ballistic missiles), such as Polaris with a weight of 222,000 to 265,000 lb., launch thrust of 300,000 to 389,000 lb., and the ability to deliver a thermo-nuclear warhead over a range of from 6,300 to 12,000 m., with a probable impact error of less than 2 m. Other rocket-propelled guided weapons are used against aircraft, surface targets, submarines and all other kinds of military target, the smallest such missiles being those designed to be carried by infantrymen and fired against tanks. Rocket-propelled vehicles are used for space exploration (q.v.). See **SATELLITE**.

ROCKET, The

The first locomotive invented by George Stephenson, which ran on the Manchester and Liverpool Railway in 1830. It is now in the Science Museum, S. Kensington, London.

ROCKET

The male has the curious habit, during the breeding season, of rolling over when in flight. The word Roller is also used for certain Tumbler Pigeons.

ROLLS-ROYCE

Two Englishmen developed the most famous motor car in the world. The Hon. C. S. Rolls (1877-1910) was an intrepid pioneer in ballooning, motor-racing and flying. He met Royce in Manchester in May 1904 and was so impressed by the performance of the 10 h.p. 2-cylinder Royce car that he agreed to be responsible for the sale of all Royce's future products. He was successful in making these cars. The Company of Rolls-Royce was founded in 1907 for the purpose of building cars; aero-engines followed during the early part of the 1914-18 war. In 1910 Rolls was the first to fly the Eng. Channel both ways without stopping. Sir Frederick Henry Royce, B. (1863-1933) was the son of a miller in the Fr. country. At 17, he had a job in a machine-tool shop at Leeds. At 21, he was in business for himself. His first car was built in Manchester in 1904. His aim was to produce the finest car in the world, and he succeeded. Many British fighter and bomber pilots in both World Wars owed their lives to the Rolls-Royce tradition, and this is being maintained with the same degree of superb technical excellence in the engines built by the firm for cars and planes, including those designed for jet propulsion (q.v.).

ROMAN CATHOLIC CHURCH

Numerically the largest body in Christendom. According to its own definition it is not a ch. among chs. but the Ch. It claims to be (a) 'One' in doctrine, sacraments and government. (b) 'Holy' with a sanctity of life and character arising esp. out of the sacramental system. (c) 'Catholic' because its members are found in every part of the world. (d) 'Apostolic' through an unbroken succession going back to the Apostle Peter. Among the distinctive R.C. doctrines are the authority of eccles. tradition, the 7 sacraments, transubstantiation, the sacrificial aspect of the Mass, purgatory, the infallibility of the Pope and the immaculate conception of the Virgin Mary. The principal act of worship is the celebration of the Mass. The supreme council of the Ch. is the Coll. of Cardinals, which acts as adviser to the Pope and at his d. elects a successor. The total R.C. pop. of the world is reckoned at over 550,000,000.

ROMAN EMPIRE

Empire of the ancient world. It grew up around the city of Rome. Traditionally the city was founded in 753 B.C. by descendants of fugitives from Troy, led by Aeneas. In 529 Tarquin, last of the 7 kings, was exiled, and the city became a repub. The chief officials were 2 consuls, who served for a year. Under them many conquests were made, with the result that in c. 200 years after Tarquin's expulsion almost the whole of Italy was ruled by Rome. In 264 B.C. the first of Rome's wars with Carthage began. During this struggle, Rome made her first acquisition of territory outside the mainland. Sicily and then Corsica and Sardinia were acquired, and a little later Greece was invaded. Spain and then Gaul were brought within the Rom. sphere of influence and possessions in Africa were extended. Meanwhile the constitution of the city was being slowly altered. The conquest of Gaul was largely the work of Julius Caesar. In 46 B.C. Caesar made himself dictator but in 44 he was murdered. His heir was his nephew, Octavian, who, as Augustus, became the first of the Rom. emperors after crushing Antony and his other rivals. Soon after the d. of Augustus the Roms. invaded Brit. and settled in its S. half. The Empire centred in the Medit. and included S. and N.W. Europe, Asia Minor and a fringe of Africa. The Augustan age was one also of great literary activity in which Virgil, Horace, Livy and other great writers flourished. Augustus was followed in A.D. 14 by Tiberius. The last of the Julio-Claudian Emperors was Nero. The best of the later rulers were Trajan, Hadrian and the Antonines. With the d. of Marcus Aurelius the decline began. His son Commodus was killed by the soldiers, who nominated Emperors in quick succession, while the barbarians became more and more menacing. The decline was arrested by the efforts of Claudian, Aurelian, and above all Diocletian. In A.D. 323 Constantine the Great became emperor and in 330 he moved his capital from Rome to Byzantium. After his term there was one ruler in the E. and another in the W. and most of them were fully occupied in resisting the barbarians. Italy was overrun and Rome itself was sacked by Alaric, 410. In 455 the last emperor of the W., Romulus Augustulus, resigned and the Rom. empire ceased to exist.

ROMANES, George John

(1848-94) He carried out extensive research supporting the Darwin theory. In 1890 he settled in Oxford where he founded the Romanes lectureship.

The first Pres. was Sir Joshua Reynolds.

ROYAL ACADEMY OF MUSIC

Founded London, 1822, for musical training in all branches. Open to students of both sexes.

ROYAL AIR FORCE

On April 1, 1911, there came into force an army order creating an Air Battn. of the Royal Engineers. A year later it became the Royal Flying Corps. The R.F.C. was composed of 2 wings, i.e. milit. and naval. Later, the naval wing became the Royal Naval Air Service. The role of the R.F.C. was at first confined to reconnaissance but, as the war progressed, new designs and techniques made possible combats with enemy aircraft, the bombing of milit. objectives and attacks on troops. On April 1, 1918, the R.F.C. and the R.N.A.S. were united to form the R.A.F. In spite of the formation of the R.A.F. Volunteer Reserve in 1936, the R.A.F. was greatly outnumbered by the enemy when World War II was declared in Sept. 1939. That the spirit of the pilots and the excellence of their machines made up for this deficiency in numbers was clearly shown in the Battle of Britain (a.t.). In 1964, control of the Air Force became a responsibility of the Unified Min. of Defence. Under it, the Air Force board administers 4 depts. (1) *Air Staff*, which deals with Policy and Operations. (2) *Personnel*, which handles all Service Personnel, Recruiting, Mail Services, Reserves and Cadet Forces. (3) *Supply and Organisation*, covering Equipment, Organisation, Airfields, and all technical services. (4) *Permanent under Sec. of State*, who deals with Secretarial, Financial and Public Relations. Commands are functional at home (Bomber, Fighter, Flying Training, etc.), and geographical overseas (Middle E.A.F., Far E.A.F., etc.). Officers enter the R.A.F. either through the ranks or by direct entry through univ. or the R.A.F. Coll. The Women's Air Force was formed on April 1, 1918, and disbanded in Mar. 1920. On June 28, 1939 the Women's Auxiliary Air Force was formed. In 1918 the name was changed once more to the Women's Royal Air Force. R.A.F. Regiment: Up to 1942 airfield security was the job of Ground Defence personnel of the R.A.F. in conjunction with Army units. In Feb. 1942, the R.A.F. Bgt. was formed and by Sept. had taken over all airfield defence in the U.K. Royal Observer Corps, formed in 1925 and manned by Special Constables, was taken over by the Air Min. on Jan. 1, 1929. The 'Royal' prefix was granted on April 11, 1941, in recognition of the part played by the Corps in the Battle of Brit. The main duty of the Corps is tracking and reporting aircraft, esp. low-flying aircraft over the U.K. The Air Training Corps was formed in Feb. 1941, and is organised as follows: (1) *Univ. Air Squadrons*. (2) *School Units* (Age 11-12) (3) *Local Units*, raised under the leadership of civil authorities. (Age 16 upwards).

* ROYAL AND ANCIENT *

Golf club in St. Andrews, Fife, Scotland. On May 14, 1764, 'Twenty-two Noblemen and Gentlemen' met together to subscribe for a silver club and to form the Society of St. Andrews' Golfers. In 1834 King William IV consented to the Club being named 'Royal and Ancient' and became its patron, an office now held by H.M. the Queen. It is the traditional authority and arbiter on the rules of the game, and manages the Brit. Open and Amateur Championships.

ROYAL AUTOMOBILE CLUB

The R.A.C. was founded in 1897 under the name of the Automobile Club of Gt. Brit. and Ireland, as a Soc. of Encouragement for the motoring movement in the Brit. Empire. In 1907 the title was changed by Royal Command to The Royal Automobile Club. The Patron of the Club is H.M. the Queen. Candidates for full membership must be proposed and seconded by 2 members and are subject to election by the Committee. They have the use of the Clubhouses in Pall Mall and at Woodcote Park and all the facilities accorded to Associate Members. Associate Membership is

open to any person owning or using a private car or motor cycle and includes the benefits of all R.A.C. road services, e.g. Road Patrols throughout Gt. Brit. and N. Ireland; Roadside Telephone Boxes; 'Get-You-Home' Service; Free Legal Defence for motoring offences; Technical Advice; Home and Foreign Touring facilities; R.A.C. Guide and Handbook.

ROYAL HORTICULTURAL SOCIETY

Founded in 1804, this is the oldest horticultural society in the world. The Society was granted a Royal Charter a few years later and held fortnightly meetings in Regent St., London. The H.Q. are now in Vincent Square, Westminster, where fortnightly exhibitions are held, as well as a spring show at the Royal Hosp. Gardens, Chelsea, in May.

ROYAL HOUSEHOLD

The attendants of the sovereign. In Eng. it consists of the Lord Steward's, Lord Chamberlain's, and Master of the Horse depts. There is also a Privy Purse dept. consisting of the Queen's personal staff.

ROYAL NAVY

Administration. The control of the Navy is vested in a board of 11 members. The Sec. of State for Defence is chairman of the Admiralty Board. Members of the Board are: Min. of Defence for the R.N. (formerly 1st Lord of the Admiralty), Parl. Under-Sec. for the R.N., the chief of the Naval Staff and 1st Sea Lord and his staff. The Naval Staff divides into various bodies, e.g. Naval Intelligence, Plans, Local Defence, Trade, Operations, Training and Naval Air Arm. Since World War II, Brit. naval forces have been considerably reduced in the light of strategy based on nuclear weapons, guided missiles and the greatly increased potential of submarines. The Navy's first nuclear-powered submarine came into service in 1963. The Fleet Air Arm (f.a.a.) is the front line defence of the Navy against air attack. Aircraft carriers now provide the main striking power of the fleet. Carrier borne aircraft include single-seat strike/fighter aircraft, low-level strike aircraft, all-weather day-and-night fighters, airborne early-warning aircraft and helicopters. **Personnel.** The General List is the main body of officers of the R.N. serving on permanent commissions. The various branches in which ratings may serve are: Seaman, Communications, Engineering, Fleet Air Arm, Electrical, Supply and Secretariat, Sick Bay,

Artificers and Regulating. The Royal Marines. The primary rôle of the Royal Marines has always been to fight on land and this Corps enables the Fleet to deal with troubles ashore or to establish a foothold for further operations. The R.M. Commando Brigade is a highly trained and powerful unit, at immediate readiness to move anywhere. The special commando ships now in service carry helicopters for putting the assault force ashore and can also provide all the equipment necessary for their support. The Women's Royal Naval Service (W.R.N.S.) carries out a wide range of important tasks. Officers undertake admin. duties and may also specialise in secretarial work, personnel selection, educ., safety equipment, technical work, etc. Ratings serve as airframe and radio mechanics, radar plot operators, meteorological assistants, drivers, signallers, switchboard operators, typists, stores assistants, cooks, etc. Naval hospitals are staffed by the Queen Alexandra's Royal Naval Nursing Service, at home and overseas. Reserves. The aim of the Royal Naval Reserve is to provide a single force of volunteers to meet the Navy's additional manpower requirements in an emergency.

ROYAL OBSERVER CORPS See ROYAL AIR FORCE.

ROYAL SOCIETY

RUSSIA See U.S.S.R.

RUSSIAN REVOLUTION
Many yrs. of revolutionary propaganda culminated in open rebellion on Mar. 12, 1917. The army refused to deal with food rioters in Petrograd and the navy joined the strikers. The Duma elected a provisional govt. and on Mar. 15 the Tsar abdicated. Lenin returned from exile, and the struggle for mastery was won by the Bolsheviks. On Nov. 7 they seized Petrograd, deposed the Kerensky govt. and obtained complete power. On Mar. 3, 1918, they concluded the Peace of Brest-Litovsk with the C. Powers, the Tsar and his family were assassinated, the Ch. repressed and the Nat. debt repudiated. Lenin was Dictator and Trotsky Foreign Secretary. By the end of 1921 all opposition had been suppressed. Lenin d. in 1924 and was succeeded by Stalin. That there was dissension within the Communist party was evident from the exile of Trotsky to Siberia in 1927, and from purges and mass trials of 'counter revolutionaries'. Meanwhile, educational, industrial and scientific development went on in the U.S.S.R., and the Red army and air force became ever more powerful. The avowed object of the Russ. rulers is world Communism.

RUSO-JAPANESE WAR
War (1904-5) caused by the clash of Jap. and Russ. interests in the Pacific. It was begun by Japan, with a successful attack on the Russ. fleets at Chemulpo and Port Arthur. The Russ. resistance was finally broken in May, when her fleet under Rozhdestvensky was routed by Admiral Togo in the battle of Tsushima. Peace was signed, Sept. 5, 1905, at Portsmouth, U.S.A. ●

RUSO-TURKISH WARS
Several wars between Turkey and Russia, mainly caused by the treatment of Christian subject peoples by the Sultan, and the desire of Russia for domination of the Black Sea and for an outlet to the Medit. The first in 1696 gave Russia Azov. The war of 1827-9 rose out of Mahmud II's cruel treatment of rebel Gks.,

which united Brit. Fr. and Russia against him. The Turkish fleet was destroyed at Navarino, 1827, and the Treaty of Adrianople, 1829, gave indep. to the Gks. The Crimean War (1854-6) lost Russia her Danube possessions and naval power in the Black Sea. Treaty of Berlin, 1878, practically ended the Turkish Emp. in Europe but alienated Russia from Austria and Germany.

SACRAMENT
In religion, and esp. in Christianity, a sacred ceremony. There are 2 views of the sacrament. One, held by the R.C., the Gk., and the official Anglican Chs., is that without the reception of certain sacraments the believer cannot attain salvation. The other view is that they are symbolic only, beneficial to the believer because of his belief in the verities of which they are the sign. The Gk. and Rom. Chs. recognise 7 sacraments: baptism, confirmation, marriage, penance, ordination, the eucharist and extreme unction. The Anglican Ch. insists that only two of these are necessary for salvation, baptism and the holy communion.

SACRAMENTO
Cap. of Calif. U.S.A. on the Sacramento river, 90 m. inland from San Francisco. Pop. 191,667.

SACRIFICE
Offering to God, or to a god. Animal sacrifices were common among the Jews, Gks., and Roms. as well as among less cultured peoples. In many religions, human beings were sacrificed, a practice now almost extinct. The idea of human sacrifice passed from Jewish into Chr. thought, and the voluntary d. of Jesus Christ is regarded as the supreme sacrifice; by it the human race is redeemed. See ATONEMENT.

SADDUCEES

There are 3 main physical divisions: (1) the S. Uplands, which lie N. of the Cheviot Hills and rise to over 2,600 ft.; (2) the C. Lowlands, a rift valley which includes the valleys of the Clyde, Forth and Tay, and (3) the N. Highlands, which occupy the greater part of the country. The Highlands are divided into a N. and S. system by the Gr. Glen. In the S. region are the Grampian Mts. with Ben Nevis (4,406 ft.), the highest point in the Brit. Is., Ben Macdui (4,296 ft.), and Ben Lawers (3,984 ft.). The chief river of Scot. is the Clyde, which flows N.W. through Glasgow, entering the N. Channel by the Firth of Clyde. The Tweed, Forth, Tay, Dee and Spey flow into the N. Sea. Of the many lochs, the largest are Loch Lomond, Awe, Tay and Rannoch in the Grampians, Ness, Erich, Lochy, Shin and Maree farther N. Much of the soil is unproductive, particularly in the mts. where cattle and sheep are bred. The S.W. specialises in dairy farming. Sheep are kept over most of the country. The principal crops are oats, barley, wheat and root crops. Certain areas, such as the Carse of Gowrie, specialise in fruit farming. Fishing is an important industry, the chief centres being Aberdeen, Peterhead, Wick and Stornoway. There are coalfields in the Lowlands around which heavy industries have developed. Glasgow, Motherwell, Coatbridge, Airdrie and Kilmarnock are centres of the iron and steel and engineering industries. Shipbuilding is important at Clydebank, Inverclyde at Kirkcaldy, cotton textiles at Paisley and jute at Dundee. Whisky and woollen goods are also produced. Various gasteropods. They have an external shell and respire air directly through part of the mantle. Some live in fresh or salt water, others on land.

SNAKE

Limbless reptile. With a long cylindrical body furnished with overlapping scales, it belongs to the sub-order Ophidia of the order Squamata. Snakes slough their skins from time to time. Venom is secreted in a modified salivary gland. The only poisonous kind in Brit. is the Adder.

SNAKE-ROOT

Plants used as an antidote for snake bite, esp. the mongoose plant (*Ophiorrhiza mungos*), of the E. Indies.

SNAPDRAGON

(*Antirrhinum majus*) Perennial herb. Of the family Scrophulariaceae, the bag-shaped flower can be made to open by squeezing sideways. One species, *A. orontium*, grows wild in Brit.

SNEEZEWORT

Perennial herb (*Achillea ptarmica*) of the family Compositae, found in Europe, Asia Minor and Siberia. It has a strong pungent smell.

SNIPE

(*Capella gallinago*) Allied to the Plover. It is a marsh frequenting long-beaked bird, resident in Brit. The best known is the Common Snipe, about 10 in. long, and is mottled brown and black. The other Brit. species are the Jack Snipe (*Limnocyrtus minimus*), which is slightly smaller, and the Solitary or Great Snipe (*C. major*).

SNORING

Flapping of the soft palate, which frequently arises from the habit of sleeping with the mouth open, especially when lying on the back.

SNOW

(1) Frozen water or precipitated in soft white flakes. (2) Snow-line. Ht. above which snow always lies. It varies with latitude and elevation.

SNOW, Charles Percy

(1905-) Eng. writer and Lab. politician. His sequence of novels began with *Strangers and Brethren* (1940), *The Light and the Dark* (1947), *The Masters* (1951), *Corridors of Power* (1964). Created Lord Snow, 1964, to serve as Parl. Sec. Min. of Technology. Ret. from this office 1968.

SNOW BUNTING

(*Plectrophenax nivalis*) Song-bird of N. Europe and Siberia. It visits the N. of Brit. in winter. The wings are noticeably pointed, and the hind claws very long. The bird has black and white plumage.

SNOWDEN, Philip, Viscount

SOCIAL PSYCHOLOGY

Branch of psychology which deals with the modification of perception and emotion, idea and action, in so far as these are the result of social environment.

SOCIALISM

Polit. and economic theory. It aims at the state ownership of the means of production, distribution and exchange, and that the opportunities of life and the rewards of labour be apportioned equitably. To many it stands for an opposition to capitalism. Among its foremost exponents were Karl Marx, Robert Owen and George Bernard Shaw (q.v.). In the 19th and 20th cents. It made great advances over almost all the world. Some countries instituted greater state control over conditions of labour, state provision for old age and sickness, state ownership of public utilities and state interference with unrestricted competition. The refusal of others e.g. Czarist Russia, to make any concessions assisted the growth of Social parties in those countries. In the polit. sphere Socialism became very strong in the 20th cent. In Brit., Australia and New Zealand the Lab. Party became responsible for govt. It was less powerful in the U.S.A. and Canada, but attained enormous strength in Germany and Fr. After World War I some of the republics that arose were definitely named Socialist. Other countries have gone far in putting Socialist principles into operation.

SOCIETY ISLANDS

Fr. archipelago in the S. Pacific Ocean. The largest Is. are Tahiti, on which is the cap. Papeete, and Moorea. Exports include phosphates and copra. Area: 650 sq.m. Pop. 68,245.

SOCIETY OF FRIENDS

Christian body, also known as the Quakers, formed in the middle of the 17th cent. under the leadership of George Fox. The Friends do not take the oath in courts of law, are averse to milit. service, and are noted for their philanthropy.

SOCINUS

The teachings of Lellius approximated closely to modern Unitarianism. Persecuted, he fled to Fr. Eng., Holland, Germany and Poland, dying in Zurich. Some years after his d. his nephew vigorously resumed his work.

SOCIOLOGY

The study of human behaviour in society. The

mod. term was first used by Comte in 1834. Others who have made notable contributions to the subject include Herbert Spencer, J. S. Mill, William James, Max Weber and Emile Durkheim. Sociology as a science studying the development, nature and laws of human society covers a wide field including social psychology, social philosophy, social and economic history, statistical methods and anthropology. It helps man to understand the society he lives in and through this knowledge maximize his limited resources in the correct channels.

SOCRATES

(469-399 B.C.) Gk. philosopher. He devoted his later life to the pursuit of philosophy and gathered around him a number of pupils, the two most famous being Xenophon and Plato. He taught that self-knowledge is more important than speculation about the universe; that truth (or wisdom) and virtue are inextricably connected, and that vice arises from ignorance.

SODA

Sodium carbonate. This is known also as soda ash, washing soda, or soda crystal. It occurs naturally and is also manufactured from common salt. Baking soda is sodium bicarbonate obtained by the action of carbon dioxide upon the carbonate and is used for baking powders, and as an antacid.

SODA WATER

Aerated water. Prepared by charging ordinary water with carbon dioxide gas under pressure.

SODDY, Frederick

(1877-1956) Brit. physicist and chemist. He did research on radioactivity with Sir Ernest Rutherford; worked with Sir Wm. Ramsay at Univ. Coll., London till 1904 when he was apptd. lecturer in physical chemistry and radioactivity at the Univ. of Glasgow. He suggested that certain elements could exist in 2 or more forms having different atomic weights but chemically indistinguishable and inseparable. He received the Nobel Prize for chemistry in 1921.

SODIUM

A soft silvery metal, best known as the chloride, NaCl (common salt) it is used in certain aluminium alloys.

SODOM

Former city of the Dead Sea region, one of the 5 'cities of the plain', proverbial for their wickedness, and destroyed by 'fire and brimstone' (Gen. xix).

SODOR AND MAN

SOIL

Surface layer of earth. Supplying nourishment for the growth of plants, a soil is formed by the weathering of rocks or may result from transport of disintegrated material by rivers or glaciers. The mineral constituents may be either sand, clay or calcium carbonate, with various carbonates, sulphates, phosphates and nitrates.

SOLAR GENERATOR

Apparatus which converts solar light into electrical energy.

SOLAR SYSTEM

Name given to designate collectively the Sun and the group of bodies which revolve round it. These consist of planets, comets and meteors. The planets are comparatively cool and dense bodies which shine by reflecting the light of the Sun. 9 major planets are known (see Table below).

	Distance from Sun (millions of miles)	Revolution Period Yrs. Days	Diameter in miles
1. Mercury	36.0	— 88	3,100
2. Venus	67.3	— 225	7,700
3. Earth	93.0	1 0	7,927
4. Mars	141.7	1 322	4,220
5. Jupiter	483.9	11 315	88,770
6. Saturn	887.1	29 167	74,200
7. Uranus	1785	84 6	32,400
8. Neptune	2797	164 288	30,900
9. Pluto	3670	247 255	7,900

The largest planet, *Jupiter*, weighs more than double all the other planets combined, but the Sun's mass exceeds that of all the planets by more than 700 times. As *Pluto* revolves at c. 3,700,000,000 m. from the Sun, the planetary system measures at least 7,400,000,000 m. across. It is generally accepted that the material which formed the Sun, planets, comets and meteors was once extended in a widely diffused nebulous form, and that it slowly became aggregated into the large masses of the Sun and planets. The Sun is travelling constantly at the rate of c. 12 m. per sec. in a direction approx. towards the bright star Vega. See ASTRONOMY, UNIVERSE, TELESCOPE.

SOLDER

Alloy used in joining metals. *Soft solder* is 60 % lead and 40 % tin, with a little antimony. *Plumbers' solder* is 70 % lead and 30 % tin. *Silver solder* is an alloy of copper, zinc and silver.

SOLE

(*Solea*) Flat-fish much valued for food. The Common or Dover Sole (*S. vulgaris*) averages 12 in., but sometimes exceeds 2 ft. in length. The so-called Lemon Sole is a kind of dab.

**SOLENT**

Strait in the Eng. Channel, between Hants. and the Is. of Wight.

SOLOMON

(reigned c. 974-937 B.C.) King of Israel. A son of David and Bathsheba, he succeeded his father c. 974 B.C. and reigned for nearly 40 years. His reign was peaceful and prosperous. SOUTH AFRICA, Republic of

Consists of 4 provs. and S. W. Africa (q.v.):

	Area (sq. m.)	Population
Cape of Good Hope ...	278,500	5,362,853
Natal ...	33,600	2,979,920
Transvaal ...	109,600	6,273,477
Orange Free State ...	49,900	1,386,547
S.W. Africa ...	318,300	526,004

The 4 provs. occupy the S. section of the great African plateau which here has a rim of uplands and mts. surrounding the basin of the Orange River and the Kalahari desert. In the extreme S. a series of E.-W. ridges form a very broken belt of country behind which lies the Great Karroo (2-4,000 ft.). In the extreme west these meet short N.-S. ridges. The greater part lies in the path of the S.E. trade winds, thus the E. coast receives heavy rain, especially in summer. In the interior rainfall is restricted to the summer period and the amount decreases westwards. The uplands of S.W. Africa have slightly more rainfall and sheep may be grazed. The Cape region lies in the path of W. winds in winter and thus receives winter rainfall. Temperature varies from about 50° F. to about 70° F. The Dutch established a station at Table Bay in 1652 to supply their ships passing to and from the E. Indies; their descendants are Afrikaners, speaking Afrikaans, a language closely related to Dutch. In 1814 the Cape became Brit. The new rule provoked opposition from the Afrikaners. In 1838 the Boers trekked over the Great Escarpment on to the veld. Meanwhile, in 1824, new Eng. settlement had begun on the coast of Natal. The trek Boers settled in N. Natal, the remainder crossed the Vaal river, defeated the Zulus and in 1852 formed the S. African Repub. (Transvaal). 2 years later the Orange Free State was similarly established. By the mid-19th cent. S. Africa had 2 Brit. colonies and 2 Boer repubs. The discovery of diamonds at Kimberley in 1867, and later, of gold on the Witwatersrand, led to much non-African immigration. Differences arose, culminating in the Boer War, 1899-1902. The Repubs. were annexed but were soon given responsible govt. Botha and Smuts tried to eradicate the legacy of bitterness and in 1910, the 4 colonies became the Union of S. Africa. S.W. Africa was mandated to the Union in 1919. In 1960 a referendum held among white voters decided by a narrow majority in favour of making S. Africa a Repub. On May 31, 1961, S. Africa became a Repub. and withdrew from the Commonwealth. Mr. C. R. Swart becoming Pres. The preponderance of non-Europeans is very

great. Figures are (1961): European 3,067,638; Bantu, 10,807,809; Asiatic, 477,414; Others, 1,488,267. Temporary migrant native labour has long been the basis of S. African economy, particularly in gold mines. Increasing pressure of population has led to decline in fertility of arable and pasture land, and many natives have moved townwards in search of a permanent living. Large squatters' townships have grown up, often appalling slums. The idea of separating the white and black races of S. Africa presented itself at the beginning of the 19th cent. The Emancipation of Slavery Act, 1833, led to the forming of two groups with widely divergent opinions. By 1910, the subject of the segregation of native from white peoples was being hotly disputed. The S. African Party under Smuts opposed the idea; the S. African Labour Party under Walter Modibane supported the Nationalists in their policy of segregation. In 1948 the Smuts Govt. was defeated and the Nat. Govt. came into power. As the chief pointer in the election manifesto, the Nat. used the slogan 'Apartheid', segregation of all coloured races, socially, polit. and physically, i.e. a native peasantry living on its own land, in reserves, from which men migrate temporarily for employment in European areas. The policy of introducing apartheid legislation into the Union was continued by Dr. Verwoerd. Among his restrictive legislation was the Bantu Educ. Act, which estab. the principle of complete segregation in educ. Widespread dissatisfaction among coloured people led to disturbances culminating in the deaths of 72 people during riots at Sharpsville. Diamonds, gold, coal and iron are the chief minerals. The chief gold mines are on the Witwatersrand, centred on Johannesburg. The Rand has produced over £1,000,000,000 of gold. Uranium extraction plants have recently been set up. Mining is a great source of government revenue. Besides which it supports a large population which, in turn, provides an important market for farmers. In the E. Rand is coal, which, with iron ore, has led to the rise of steel works. Administration. There is a Senate, 11 members of which are apptd. by the Govt. and the remaining 43 are elected. Proportional representation was reintroduced in 1960 but Native representation was excluded. The House of Assembly consists of 160 elected members and 41 members representing the coloured voters in the Cape Prov. B. J. Vorster became P.M. on Dr. Verwoerd's death in 1966.

SOUTH AMERICA

One of the world's greatest continents. In the W. hemisphere, it is joined to N. Amer. by the narrow isthmus of Panama and extends to the S. for c. 4,500 m. The greatest breadth is 3,200 m. and the total area is c. 7,000,000 sq.m. In the extreme W. the great mt. ranges of the Andes run parallel to the Pacific coast, rising to peaks of 20,000 ft. The E. part of the continent consists of the Guiana and Brazilian Highlands. Between these mt. regions lie the great plains through which flow the 3 largest rivers of S. Amer., the Amazon, Orinoco and Parana-Paraguay systems. The Equator passes through the continent just S. of the Amazon. There is thus a great range of climate and vegetation, from the desert of the Atacama to the dense forests of Brazil. The native inhabitants are Indians but with the introduction of negro and European stock, the pop. is very mixed. Apart from Brit., Fr. and Dutch Guiana in the N., the continent is divided politically into 10 repubs. Brazil and Argentina are the largest; the others are Bolivia, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay and Venezuela (q.v.).

SOUTH ARABIA, Fed. of Protectorate formed in 1962 of Arab states in the Aden penin. • Cap. Al Attihad. Area:

The supreme executive is the Council of People's Commissaries, drawn from this committee, and its chairman is the titular head of the state. See U.S.S.R.

SOVIETSK

(formerly Tilsit) Town in the Russ. S.F.S.R., on the Niemen, 65 m. N.E. of Kaliningrad. Part of E. Prussia, it was ceded to the U.S.S.R. by Germany after World War II. Pop. 57,000.

SOYA BEAN

Herb of the family Leguminosae, native to Asia and grown for its food value. The beans are in pods. The bean is grown on a vast scale in Manchuria, from where it is exported. From it an oil is obtained, used in the making of margarine.

SPA

Place where mineral springs are found, the water of which is supposed to have some medicinal properties. Situated all over Europe, the better-known are at Wiesbaden, Aix-les-Bains, Contrexeville, Bath, Harrogate and Buxton.

SPACE EXPLORATION

Manned Earth orbit and circumlunar flight having been accomplished; this will be followed soon by the soft-landing of instruments on the Moon, lunar soft-landing of a payload and its subsequent return to Earth and finally a wide variety of missions into deeper space. From the scientific and engineering point of view, interplanetary travel is now a practical possibility. The Apollo project of the U.S. Aeronautics and

Space Admin. aims to put a man on the Moon. The Apollo craft consists of a command module, a service module and a lunar-excision module (LEM). The assembled vehicle will be placed in lunar orbit, from which the LEM will descend and soft-land on the lunar surface carrying 2 of the 3 men assigned to the mission. After a short stay on the Moon the ascent portion of LEM will take off and rendezvous with the orbiting craft, dock and transfer its 2 men. The return vehicle will then fly back to Earth. First man in space was Maj. Yuri Gagarin, U.S.S.R., May 12th, 1961; first Amer. in orbit, Lt.-Col. John Glenn, Feb. 20th, 1962.

SPACE-TIME

The work of the German geometer, Riemann (1826-66), the Polish mathematician, Minkowski (d. 1908), the Dutch physicist, Lorentz (1853-1928) may be said to have culminated in the work of the great German physicist, Albert Einstein (1879-1955) whose Theory of Relativity wrought fundamental changes in the basic theories of the universe held by physicists, and in their conceptions of space and time. Space and time are conceived as inseparable, and the universe cannot be understood except in terms of a uniform four-dimensional continuum, three of space and one of time. Everything in motion is constantly changing its state and position relative to every other thing. If we assume a hypothetical observer of one of our hydrogen bomb explosions to be situated on the star Sirius, what is 'past' for us becomes 'future' for the observer; because Sirius is 9 light years distant from the earth, he will perceive the explosion 9 years after the event. In this connection, past, present and future, and time, are relative. Furthermore, the Newtonian Theory of Gravitation, i.e. that a body travels in a straight line until halted or deflected by some force outside itself, is now proved false. In Einstein's cosmos, which is finite, and curved in a four-dimensional way by the matter within it into a closed, spherical structure, all bodies whether planets in the solar system or electrons in the atom, move as they do because they cannot do other—they must conform to the 'shape' of the continuum. See *The Meaning of Relativity* by Albert Einstein (1953).

SPAIN

State of S.W. Europe, forming the greater part of the Iberian peninsula. It has a long coastline on the Bay of Biscay, the Atlantic Ocean and the Medit. Sea. The country has the Cantabrian Mts. and Pyrenees in the N., and the Sierra Nevada in the S. Most of the interior is occupied by an extensive tableland, the Meseta, crossed by several ranges. The chief rivers are the Ebro and Júcar, flowing into the Medit. and the Guadalquivir, Guadiana, Tagus, Douro and Minho, entering the Atlantic. The plateau has a wide range of temps. and light rainfall; the N.W. has a mild climate with heavy rain, while the E. and S.E. coastlands have a Medit. climate. Sp. is an agricultural country, although there are valuable deposits of tin, silver, lead, copper, coal and iron. Fishing is an important industry in the N.W. and sardines are canned for export. The main industrial region is centred on Barcelona. Madrid is the cap.; other cities are Barcelona, Valencia, Seville, Malaga and Bilbao. R.C. is the state religion. For admin. purposes the Balearic and Canary Is. form provs. of Sp. Area: 197,000 sq.m. Pop. 31,339,000. Its recorded hist. begins with the settlement of the Phoenicians. Later the Gks. and the Carthaginians arrived and then the Romans made it part of their emp. From c. 530 to 730, the Visigoths had a kingdom in Sp. A Moorish one followed it, covering the S. of Sp., with its cap. at Cordoba. In the N., c. 1,000 A.D. Christian kingdoms emerged, the chief of them

being Castile, Aragon, Leon and Navarre. In 1479 Ferdinand of Aragon mar. Isabella of Castile. Two great events marked this joint reign; Columbus discovered Amer. and founded there a great Sp. emp., and the kingdom of the Moors in Sp. was destroyed. During the 16th cent., Sp. was the greatest country in Europe. Its ruler (1516-65) was Emp. Charles V; then came his son, Philip II. In 1580 the king united Portugal with Sp. In 1700 the last Hapsburg king d., and 1714, after the War of the Sp. Succession, Bourbon Philip V. was recognised as king. Sp. played a considerable part in European politics in the 18th cent., until dominated by Napoleon. Early in the 19th cent. the countries in Sp. Amer. made themselves independent of Sp. and at the end of the cent., Cuba and the Philippine Is. were lost after a war with the U.S.A. In 1833 and again in 1868 there was civil war. Finally the queen, Isabella, a daughter of Ferdinand VII, secured the throne and her opponents, called Carlists, were defeated. In 1886 Alfonso XIII became king and he reigned until 1931. His reign, esp. after World War I, was marked by considerable unrest. The king was forced to leave the country, 1931, and a socialist repub. was set up. Strikes and general polit. disorder led to the rise of the Sp. Fascist Party. In July, 1936, Civil War broke out, beginning with army mutinies, and Gen. Franco assumed the leadership of Nationalist Sp. In Oct. The war between Republicans and Nationalists was marked by a chilling ruthlessness and by foreign intervention on both sides. In 1939 the Nationalists were finally victorious. Gen. Franco assumed the leadership of the State and establd. a Fascist dictatorship. During World War II Sp. remained neutral, although friendly towards Axis powers.

SPALDING

[spawl-] Urban district of Holland, Lincs., on the Welland, 14 m. S.W. of Boston. It is an agricultural centre famed for its bulbs and potatoes. Pop. 14,940.

SPANIEL

Group of dogs used for retrieving game. Spaniels are characterised by the broad skull with high forehead and large pendulous lobe-shaped ears.

SPANISH GUINEA

Colony of Sp. in W. Africa, comprising the Is. of Fernando Póo, Annobon, Corisco, and Great and Little Elobey, with Continental G. on the mainland. Cocoa, coffee and sugar are exported. The cap is Santa Isabel on Fernando Póo. Area, c. 10,000 sq.m. Pop. 183,377.

SPANISH SAHARA

Colony of W. Africa, consisting of 2 zones, Rio de Oro and Sekia el Hamra.

SPARROW

(*Passer domesticus*) Really a Finch, this common bird is found in most settled parts of the world. About 7 in. long, it has the short strong beak of the Finch family.

SPARROW HAWK

(*Accipiter*) The genus has several species of which *A. nisus* is the common Brit. example. It lives in the woods and is very destructive to game.

SPARTA

City of ancient Greece, also known as Lacedaemon. It stood on the banks of the Eurotas in the Peloponnese. The Spartans of hist. were Dorian invaders. The training of citizens was strictly milit. Sparta played a leading part in the Graeco-Persian Wars but her greatest struggle took place against Athens in the Peloponnesian war (q.v.) in which she was finally victorious.

SPEAKER

• Pres. of the Brit. House of Commons and of similar legislative bodies. The first Speaker

was Sir Thomas Hungerford in 1377. The Speaker is elected by the members from among their number at the beginning of each Parl. The tradition has grown up that the Speaker must not vote nor express any opinion on controversial questions.

SPEAR

One of the oldest weapons used by man. It consists of a shaft and a head which in early times was of flint or other stone or bone. Later it was made of iron.

SPEARMINT

(*Mentha spicata*) Perennial herb of the family Labiatae. The creeping root throws off numerous underground runners. The stems are square and erect, with opposite deep green aromatic leaves. It is used as a flavouring.

SPECIAL CONSTABLE

Man sworn in to assist the police in times of emergency.

SPECIFIC GRAVITY

Ratio of the density (weight of unit volume) of a substance to that of water or other standard substance. In the case of gases, air or hydrogen is taken as the standard, for liquids and solids, water at 4° C.

SPECTRUM

Series of images, usually of a narrow slit, each formed by 1 wavelength (i.e. 1 colour) in a beam of light including several wavelengths. A white light source contains all of the visible wavelengths and its spectrum is a continuous band of colour.

SPEECH

Ability to utter articulate sounds or words. The sounds are produced by the passage of air between the vocal chords and are modified by use of the tongue, teeth and lips. See PHONETICS.

SPEEDWAY RACING

Motor-cycle races held on oval courses of dirt or cinders. The sport originated in Australia, was brought to Brit. in 1928. The tracks have their own teams and were organised in divisions each of which ran league matches. In 1965 these amalgamated to form the British League. There is also an Individual Riders World Championship open to all countries.

SPEEDWELL

Flowering herb, of family Scrophulariaceae and the genus *Veronica*, growing in Europe and Asia. Several species are found in Brit. They have bright blue flowers.

SPEKE, John Hanning

(1827-64) Eng. explorer. He travelled extensively in Asia and in 1854, with Sir Richard Burton, explored Somaliland and the region around L. Tanganyika. He discovered the source of the Nile in the Victoria Nyanza.

SPELEOLOGY

The scientific study of caves.

SPELLING

The present conventions in Eng. spelling date from the late 17th cent. The basis is largely the writing of Eng. by Anglo-Norman scribes of the 12th-13th cent. Initial capitals for nouns ceased in the late 18th cent.; so did italics for proper names.

SPENCER, Sir Basil Urridge

(1873-) Architect. Particularly well known for his work on Festival of Britain buildings (1951) and for Coventry Cathedral. K.B., 1960. R.A., 1960. O.M., 1962.

SPENCER, Herbert

(1820-1903) Eng. philosopher. In 1848 he became Assistant Ed. of *The Economist*, and thenceforward devoted himself to developing his system of philosophy. He wrote *First Principles*, *Principles of Biology*, *Principles of*

370 • SPENCER, SIR STANLEY

Psychology, Principles of Sociology, and Principles of Ethics.

SPENCER, Sir Stanley
(1891-1959) Brit. painter. B. Cookham. His religious works are a modern interpretation of the Bible.

SPENDER, Stephen Harold
(1909-) Eng. poet. He ed. *Horizon* (1939-41) with Cyril Connolly; pub. 7 vols. of poems (1929-49); verse-play *Trial of a Judge* (1938); *The Destructive Element* (1936); *The Making of a Poem* (1955); *World Within World* (1951) (autobiog.); several novels. C.B.E. 1962.

SPENGLER, Oswald
[speng'-glér] (1880-1936) German philosopher. His interpretation of history as a series of identical cultural cycles the last 8 of which pertain to W. civilisation which, he averred, is now on the decline, created interest in Germany, esp. among the Nazis.

SPENSER, Edmund
(1552-99) Eng. poet. He pub. *The Shepherds Calendar* in 1579. His unfinished allegorical epic *The Faerie Queene* was pub. 1590-6. He also wrote *Epithalamion*; *Amoretti* (sonnets).

SPERM
Alternative name for the Cachalot Whale. Sperm oil is a complex oleate. See CACHALOT.

SPERMACETI
[set'-i] A pearly-white, glistening, crystalline, wax-like solid obtained from the sperm oil present in the head cavities of the sperm whale (*Physeter macrocephalus*).

SPERMATOZOA
Mobile male germ cells or microgametes produced in the testes. In the higher forms of animal life they are extremely minute structures, somewhat tadpole-like in form.

SPHENODON
(*Sphenodon punctatus*) Lizard-like reptile found in New Zealand. It is the only remaining representative of the order Rhynchocephalia.

SPHINX
[sfíngks] (1) Name applied by Greek travellers to sphinx-headed figures resembling the sphinx of Theban legend, which propounded riddles and strangled those who failed to solve them. (2) Huge sculptured recumbent human-headed lion at Gizeh, a short distance S.E. of the Great Pyramid.

SPICE
Vegetable substance, aromatic to smell and pungent to taste. It is obtained from certain plants, esp. those that grow in hot countries, and is used for flavouring, etc. Examples are pepper, ginger, nutmeg and cinnamon.

SPIDER
Arthropod of the order Araneidae belonging to the class Arachnida. In some trop. countries it attains a length of over 2 in. and spins a net capable of capturing birds. The spider's spinnerets are contained in its abdomen and the foot is provided with a comb which helps in drawing the silken thread out of the spinneret.

SPIKENARD
Perennial herb, native to the Himalayas. The root is very fragrant and from it a perfume is prepared.

SPINACH
Edible herb of the family Chenopodiaceae, introduced to Brit. in the 16th cent. and now a popular table vegetable.

SPINDLE TREE
Tree found in woods and hedges in Brit. It bears glassy lance-shaped leaves and clusters of small, greenish flowers followed by crimson fruit. It is c. 20 ft. high.

SPINE
Bony skeleton which plays an important part in body architecture. Consists of numerous small bones called vertebrae built one on top of the other and firmly held in position by ligaments and muscles.

SPINEL
Group of minerals typified by common spinel, a mineral composed of magnesia and alumina.

SPINOZA, Benedict
(1632-77) Dutch philosopher. B. Amsterdam. By birth a Jew, later he left that faith. He embodied his ideas in his *Ethica* and other works pub. after his d. His *Tractatus Theologico Politicus* is an expansion of the ideas of Descartes. Spinoza's philosophy is pantheistic.

SPIRAEA
[spi-rē-á] Genus of plants of the family Rosaceae and sub-family Spiraeoideae. Two of the herbaceous species, dropwort and meadow sweet, are native to Brit.

SPIRIT
God as the supreme Cosmic Reality. The term is also used for (1) the animating, non-material, divine element in man that gives life and reason; (2) the Soul, the immortal individuality; (3) will and intelligence divorced from a physical body; and (4) loosely, for ghosts, apparitions, etc.

SPIRITUALISM
Belief in the possibility of intercommunication between the living and the dead. The intercourse is usually carried out with the help of mediums who submit to the direction of spirits acting as agents for the spirit world. Seances for the purpose of getting into touch with the departed, held in the presence of scientific investigators, have revealed remarkable phenomena. These are recorded by the Soc. for Psychical Research.

SPITHEAD
Roadstead at the entrance to Portsmouth Harbour.

SPLEEN
Soft, fleshy, dark-blue organ situated near back bone. Main function concerned with formation of white cells called lymphocytes and the destruction of old red cells.

SPLEENWORT
Any form of the genus *Asplenium* of the family Polypodiaceae. The commonest Brit. form is *Ceterach officinarum*, which grows on rocks and masonry.

SPODE
[spód] Chinaware first made by Josiah Spode, at Stoke in 1799.

SPOKANE
City of Washington, U.S.A. The 2nd city of the state. It is a mining and lumbering centre. Pop. 184,000.

SPONGE
Animal belonging to the Phylum porifera, or parazoa. In its simplest form consists of an individual organism, having a cylindrical or vase-shaped body, forming a 3-layered sac, pierced by numerous pores through which water passes into the inner cavity, whose walls are lined with flagellate cells.

SPOONBILL
Bird allied to the Ibis. It is the only European species of *Platalea leucorodia*. Formerly a resident in Brit. but now only an occasional visitor. It is white in colour with a tinge of pink or buff, and has a remarkably long, flat bill much dilated at the tip.

SPORADES
Gk. archipelago in the Aegean Sea.

SPORE

(1) (Biology) Non-sexual reproductive cell found in the flowerless plants and capable of giving rise to a new plant which may or may not resemble the parent. (2) (Zoology) Hard-coated reproductive cells produced in some of the lower animals, esp. the Protozoa.

SPOROZOA

Class of parasitic protozoa which reproduce by the formation of spores. One of them, the parasite of red blood cells, *Plasmodium*, is the cause of malaria the greatest killing disease of man.

SPRAT

(*Clupea sprattus*) A small fish of the Herring family. It abounds along the Brit. coasts.

SPRING

(1) The first of the 4 seasons. In the N. Hemisphere it commences at the Vernal Equinox when the Sun enters the Zodiacal sign Aries, c. Mar. 21-22, and crosses the Equator. At this period of the year day and night are of equal duration throughout the world. Spring terminates at the Summer Solstice, c. June 21-22. (2) Natural outflow of water from the earth. Water percolates through a permeable bed such as sandstone or limestone until it reaches one that is impermeable. Here it accumulates, ultimately finding its way by fissures or joint-planes to the surface.

SPRINGBOK

(*Antidorcas*) A of Gazelle, found in S. Africa, and famed for its power of springing when running.

**SPRINGFIELD**

Cap. of Illinois, U.S.A., c. 180 m. SW of Chicago. Home of Abraham Lincoln. Pop. 83,271.

SPRINGTAIL

Small wingless insects of the order Collembola. The name is derived from a forked organ under the abdomen which, on being released, acts as a spring, throwing the insect into the air.

SPRUCE

Genus of the Coniferae inhabiting cold and temp. regions of the N. hemisphere. *Picea abies* (Common spruce), important timber tree in N. Europe and Asia.

SPURGE

Genus of plant. Of the family Euphorbiaceae, mostly herbaceous, but some woody, c. 12 species. Natives of Brit.

SPY

One who unlawfully collects secret information. By internat. law a spy, if caught, may be shot.

SQUASH RACKETS

A development of the game of rackets. The earliest courts were built at Harrow School. The court has 4 walls, the floor 32 by 21 ft. The front wall 15 ft. high, back wall 7 ft., and the side walls sloping from 15 ft. to 7 ft. A soft hollow rubber ball and a light racket 7-8 in. diam. and 28 in. long is used. The ball

is played alternately by each player. It is allowed to bounce once and has to hit the front wall during the flight.

SQUATTER

One who settles on land that is unoccupied. In Eng. law if such a person has not been disturbed in his possession for a period of years he becomes the owner of the land.

SQUID

Calamary or Cuttle-fish. The name is more particularly applied to the small variety (*Loligo vulgaris*) found along the Brit. and Fr. coasts. It carries a reservoir of inky fluid which it squirts out in order to baffle an enemy.

SQUINTING

(Strabismus) Squinting is due to some muscle weakness causing the 2 eyes not to look in the same direction at the same time. It may be hereditary or may arise from muscle strain resulting from optical error. Paralysis, resulting from disease within the brain or affecting one of the nerves supplying the eye muscles, may lead to squinting.

SQUIRREL

Small rodent of the family Sciuridae. Mostly arboreal and found nearly everywhere except in Australia, the Brit. variety (*Sciurus vulgaris*) measures 18 in. long, including an 8 in. tail.

SRINAGAR

Cap. and chief city of Jammu-Kashmir, on the Jhelum. Pop. 285,257.

STAËL, Madame de

[*née*] Anne Louise Germaine (1766-1817). She achieved fame as a writer, a conversationalist, and a society woman. She wrote *Corinne*, *Delphine*, *De l'Allemagne* and *De la Littérature* (1800).

STAFFA

Is. of the Inner Hebrides, Scot., in Argyll, 6 m. N. of Iona. It is famous for its basalt caves.

STAFFORDSHIRE

(Staffs.) Midland county of Eng. The chief river is the Trent. In the N. are the Potteries, embracing Hanley, Burslem and Stoke-on-Trent. In the S. is the Black Country, in which, at Wolverhampton and Walsall, all types of iron are manufactured. Burton-on-Trent is renowned for its breweries. It returns 18 members to P. (12 borough constituencies). Pop. 1,734,000. Stafford, Borough and county town of Staffs., 23 m. N.W. of Birmingham. Industries include boot factories and engineering works. It returns 1 member to Parl. Pop. 48,000.

STAG

Male of the red deer. Stags in Scot. are stalked, and shot with a rifle. On Exmoor, in the New Forest, and in Ribblesdale, Yorks., they are hunted.

STAGE COACH

Vehicle that formerly carried passengers and goods. It was drawn by 2, 4 or more horses, and had seats inside and outside. It appeared in the 17th cent. and was in favour until superseded by railways.

STAGHOUND

Breed of dog used for hunting stags. The modern staghound is a large foxhound, different from the staghound of old which was a bloodhound.

STAINED GLASS

Glass coloured by fusing metallic oxides into it, or burning pigment into its surface. There are many fine examples of the 13th and 14th cent., e.g. at Chartres Cathedral, Canterbury, York Minster. In the 19th century, William Morris and Burne-Jones (q.v.) revived the art.

STALACTITE

Calcareous growth, usually cylindrical or conical in shape and formed by the steady drip-

ping of water from the roofs of caves. 'Each drop when it evaporates leaves behind it a tiny speck of calcium carbonate deposited from solution. There are examples in Eng. in the caves at Cheddar and the Peak cavern in Derbyshire. Stalagmites are of similar formation, but are found on the floors of caves, built from the ground upwards.

STALIN, Iosif Vissarionovich (Djugashvili) (1879-1953) Russ. statesman. Pres. of the Council of People's Commissars. B. Georgia. He was active in the plot to overthrow Kerensky in 1917 and subsequently became Sec. of the Russian Communist Party. On Lenin's d. Stalin assumed his place and removed all opposition, including Trotsky (q.v.). As dictator of Russia he inspired his country to fight against the Germans in World War II and co-operated to some extent with the W. Powers. After 1945, however, the 'Iron Curtain' dropped on Russia and her satellites and any real co-operation between the U.S.S.R. and the W. Powers proved impossible. After his d. the 'anti-Stalin cult' developed in U.S.S.R.

STALINGRAD See VOLGOGRAD.

STAMFORD

Borough of Kesteven, Lincs., partly in Northants. Pop. 12,310.

STAMP, Charles Josiah

1st Baron S. (1880-1941) Brit. economist who sat on the royal commission on income tax, 1919, the N. Ireland finance arbitration committee, 1923-4, the committee on taxation and nat. debt, and the Dawes Committee, 1924. He was a member of the court of enquiry into the coal industry, 1925, and of the Young Committee on reparations, 1929. In 1939-41 he was an economic adviser to the govt.

STAMP ACT

Measure requiring all legal documents in the Amer. colonies to bear a revenue stamp. Passed by Parl. in 1765, the act was violently opposed in Amer. on the ground that Parl. had no right to impose taxation unless representation went hand-in-hand with it.

STAMP DUTY

Form of indirect taxation. Duties are collected by means of stamps affixed to legal and other documents by which property is transferred or other privileges are secured. Among documents requiring to be stamped are insurance policies, bills of exchange, contract notes, patent specifications.

STANFORD, Sir Charles Villiers

(1852-1924) Irish composer. He was conductor of the London Bach Choir, and teacher of composition at the Royal Coll. of Music in London. He wrote operas, 7 symphonies, 3 piano concertos, choral music, much ch. music and chamber music, also over 100 songs.

STANHOPE, James

1st Earl (1673-1721) Eng. general and statesman. C.-in-C. of the Brit. forces in Spain, 1708. He captured Port Mahon. On the accession of George I (1714) he was made a Sec. of State. He directed the suppression of the Jacobites, 1715. Lady Heather Lucy S. (1776-1839) Eng. traveller, daughter of the 3rd Earl of Stanhope. From 1801-6 she lived with her uncle, William Pitt.

STANLEY

Chief town of the Falkland Is. Prot. on the E. coast of E. Falkland. Pop. c. 1,074.

STANLEY, Sir Henry Morton

(1841-1904) African explorer. Orig. named John Rowlands he was b. in Wales. He made his famous journey in 1871-2 in search of David Livingstone and found him near L. Tanganyika. His works include: *How I Found Livingstone*, *Through the Dark Continent*, *The Congo*, and *In Darkest Africa*.

STAR

Heavenly body other than a planet. The aspect of the heavens in regard to stars varies according to the annual motion of the sun, one half of the heavens being visible at midnight in June, and exactly another half at midnight in Dec. Some stars, called 'variables', undergo changes of brilliance, and have to be ranked at different times under different magnitudes. There are numerous double and binary stars, and in particular parts of the sky there are clusters, such as the Pleiades, Hyades, etc., which are quite distinct from nebulae. The *stellae fixae* or fixed stars appear to the eye to be stationary, but are in fact moving at enormous speeds (c. 10 m. per sec.) but are so distant that no change in their relevant positions is perceptible. For example, *Sirius* is 9 light years distant and other fixed stars visible to the naked eye are from 10-100 light years away. These stars send no detectable radio waves. However, strong radio signals received by radar led to experiments which began in 1924 revealing that in addition to the light stars there exist radio or dark stars which transmit radio waves, but no detectable light waves. With this discovery there began a new science of radio astronomy (q.v.).

STAR CHAMBER

Eng. law court. Regulated in 1487 by Henry VII to deal with the nobles who were too powerful to be punished by the ordinary courts. It was operative under the Tudors and Stuarts, and became very much hated in the time of James I and Charles I owing to its arbitrary procedure. It was abolished in 1641.

STAR OF BETHLEHEM

Bulbous-rooted plant, of the family *Liliaceae*, bearing from 6-9 large white fragrant flowers. It is native to Fr., Germany, Switzerland and other parts of Europe. The common star of Bethlehem (*Ornithogalum umbellatum*) is a garden flower in Eng.

STARCH

A carbohydrate occurring in the cells of plants. Starch is insoluble in cold water but on boiling gelatinises, forms a paste, and when boiled with diluted acids is changed into glucose, or by dry heat into dextrine or Brit. gum.

STARFISH

Echinoderms belonged to the class *Asteroidae*. In the Pacific some starfish attain a great size: *Pycnopodia helianthoides*, c. a yd. in diameter with over 20 arms. The Common Brit. starfish (*A. rubens*) is found at low tide.

Brittle Star

STARLING

(*Sturnus*) A passerine bird, family *Sturnidae*. The Common Starling (*S. vulgaris*) is abundant throughout Brit., migrating from district to district in search of food, breeding twice in a season and laying from 4-7 pale blue eggs in a rudely built nest. In autumn Starlings form flocks in which they fly about before roosting.

STARS AND STRIPES

Nat. flag of the U.S.A. Its 7 horizontal red and 6 horizontal white stripes represent the orig. 13 seceding states. It had a blue cantop emblazoned with 50 stars, representing the 50

states of the union. The flag, as o.s.g. designed in 1777, had only 13 stars.

STATEN

Is. of New York, at the mouth of the Hudson, separated from Manhattan by the Narrows.

STATES GENERAL

Estates of the realm. The name was formerly used in Fr., Spain and other countries for the precursors of the modern legislatures. They consisted usually of 3 classes, clergy, nobility and commons. In Fr they never obtained much power. They met from time to time until 1614. Their meeting in 1789 proved the prelude to the Revolution. The Dutch repub. possessed a states general and this is the name of the legislature of the present kingdom of the Netherlands.

STATISTICS

Numerical or pictorial statements of facts produced and arranged so as to make clear the relationship between each group of figures.

STAVANGER

Port of Norway, 105 m. S of Bergen on the S. Fiord. Fishing and shipping are the chief industries. Pop 53,000.

STEAM ENGINE

The first recorded steam engine was that of Hero of Alexandria (30 B.C.), but no real progress was made prior to the 18th cent. when the Scot, James Watt (1736-1819), hit upon the idea of a separate condenser in 1763. In 1796 Richard Trevithick (1771-1833) invented the first steam-propelled road vehicle. George Stephenson (1781-1848) constructed his first locomotive in 1814, and William Symington (1763-1831) devised an early form of steam engine for ships and for road locomotion.

STEEL

Alloy of iron with carbon, manganese and sometimes small amounts of other materials. The carbon steels, containing less than 2% of carbon, comprise the mild steels (0.1 to 1.5% carbon), and the tool steels (0.6 to 1.5% carbon). The metal produced is tough and greyish-white with great tenacity and tensile strength, these characters adapting it to constructional work.

STEELE, Sir Richard

(1672-1729) Eng. writer. B. Dublin. In 1709 he founded the *Tatler*, it was followed by the *Spectator* and the *Guardian*, Addison co-operating in all.

STEEN, Jan

(1626-79) Dutch painter. B. Leiden. His best known works are *Domestic Life, Work and Idleness* and *Bad Company*.

STEEPLECHASING

Horse racing over hedges, ditches and other obstacles set up on a regular course. The Grand Nat., the great steeplechasing event of the year, was instituted in 1839. It is held at Aintree in March, the course being 4½ m. with 30 jumps.

SYMBOL

A sign by which one knows or infers a thing; an *emblem*. It is generally a definite visible figure intended to represent or stand for something else as in the case of the common *astronomical symbols*, which are signs conveniently representing astronomical objects, phases of the moon, etc. and astronomical terms. The symbols for the chief heavenly bodies are as follows: Sun, ☉, Mercury ☿, Venus ♀, Earth ♁, and ♄, Moon ☾, Mars ♂, Jupiter ♃, Saturn ♄, Uranus ♅, Neptune ♆, Comet ♀, Star ✱. *Lunar phases*: ☾ Moon in conjunction, or *new*; ☽ Moon in E. quadrature, or *first quarter*; ◐ Moon in opposition, or *full*; ☾, Moon in W. quadrature, or *last quarter*. Chemical symbols are merely the first letters of the names of the chemical elements; or, when the names of two or more elements begin with the same letter, two letters are used as the symbol, one of which is always the first letter of the name of the element. Mathematical symbols are letters or characters used to denote numbers, functions, operations, and relations. Sometimes a letter is used for a definite number, as *e*, or π ; more usually the use of a letter for a number indicates that the number is not restricted to have one special value. Similarly, when a letter is used as a symbol for a *function*, it may stand either for one special function, or for any function at all. The symbols γ , π , J , for example, are invariably understood to stand for the gamma, pi, and first Bessel Function respectively. Symbols without letters, such as +, -, \times , \div , $\sqrt{}$, \therefore , =, \neq , \leq , \geq , are also in general use.

SYMBOLISM

Representation of a thing, person or idea by means of a sign, drawing, symbol, etc. which being recalls that which by analogy it is intended to represent. Sacred emblems, etc., many of which have an esoteric significance, have been, and are, used in many religious, occult and mystic fraternities throughout the world. Many orders and fraternities (Catholic, Rosicrucian, Masonic, Political, Educational, etc.) employ symbols for initiatory and other purposes. Symbolism was a movement in Fr. poetry (c. 1870-1920) which exploited the music and suggestiveness of words rather than their meaning.

SYPHILIS

An infectious and contagious disease contracted by sexual intercourse with an infected person or passed from an infected mother to her unborn child. Usually the first sign is a small red area on the male genital organ. In the female this area may be inside the vagina and invisible except at special exam. The red area breaks down and an ulcer or chancre with a yellow centre forms. During this period the person is very infectious. During the next 2 or 3 years the general health is poor. This is the secondary stage of the disease and the discharge from the throat or skin during this time is highly infective. In the third or final stage the disease may affect the heart and blood vessels, or the brain and spinal cord or bone and skin. Congenital syphilis resulting from infection passed from the mother to her unborn child causes deformities of the teeth and bones, lack of development of the brain with early mental deficiency, blindness, deafness and other conditions.

SYRACUSE

Seaport of E. Sicily, 35 m. S.E. of Catania. The city has a cath. and remains of an amphitheatre. There is a trade in salt, wine, olive oil and fruit. Founded c. 732 B.C., it was the most important GK. city in Sicily. Pop. 86,000.

TEETH

A tooth is composed of dentine with a covering of hard chem. resisting material called enamel, usually white in colour. Each tooth is attached to the bone of the jaw by roots. Each person in a life-time has 2 sets of natural teeth. The first begin to appear at the 6th month and the set of 10 above and below is complete by the age of 1½ years. The second or permanent teeth begin to appear at 6 years and in the process of eruption push the milk teeth out. There are 32 permanent teeth. The common arrangement of teeth is 2 incisors, 1 canine and 2 molars in the first dentition, and 2 incisors, 1 canine, 2 bicuspids or pre-molars and 3 tricuspid or molars. The eruption of the permanent teeth is complete by the age of 20 years. See DENTIST.

TEHRAN

[tair-ran'] Cap. of Persia, S. of the Elburz Mts., 70 m. from the Caspian Sea. Carpets and cotton goods are manufactured. Pop. 1,900,000.

TEL-AVIV-JAFFA

[tel-aviv'] Largest port of Israel, on the Medit., c. 50 m. S. of Haifa. Pop. 386,612.

TEL-EL-AMARNA

Modern name given to an ancient site of ruins and rock tombs, on the Nile, 58 m. N. of Asyut. See AKHENATEN; AMLNHOTEP III.

TELEGRAPH

Electrical apparatus devised to transmit messages to a distance. The first needle telegraph was patented by Cooke and Wheatstone in 1836. The Morse code is used for telegraphic mes-

sages. Recording is made automatically on a tape. In submarine telegraphy a siphon recorder invented by Lord Kelvin acts as a receiving instrument. The wireless telegraph is based upon similar principles, the messages being transmitted by electro-magnetic radiations.

TELEPATHY

Transference of thought from one person to another. The earliest recorded experiments were conducted by Sidgwick in 1871.

TELEPHONE

Electrical instrument by which sound is transmitted and reproduced at a distance. The first telephone capable of reproducing speech was invented by Graham Bell and exhibited at the Philadelphia Exhib. 1876. Improvements were made by Edison, and a carbon transmitter or microphone was devised by Prof. Hughes. The wireless telephone uses electromagnetic radiations for transmission. The first trans-Atlantic telephone cable service was formally opened in Sept. 1926.

TELESCOPE

Optical instrument for viewing distant objects. The simplest form of astron. telescope consists of 2 lenses placed one at each end of a tube. For astronomical observation a reflecting type is used. The two largest reflectors in the world are the 100-in. at Mt. Wilson and the 200-in. Halo at Mt. Palomar, Calif. In 1925 the former first showed the immensity of the universe and the latter has revealed a galaxy 1 million light yrs distant. See ASTRONOMY, RADIO ASTRONOMY, RADIO TELESCOPE, COSMOLOGY.

TELEVISION

Transmission and reception of visual images using electro-magnetic radiation. At the transmitter an image of the scene to be televised is projected by lenses on to a sensitive surface consisting of a mosaic of tiny photo-electric elements each comprising a caesium globule. Electrons are emitted from the globules in proportion to the light falling on them. Periodically a beam of electrons is swept across the mosaic, touching each photo-element in turn and replenishing it with electrons; in this way a current is caused to flow in an external circuit connected to the mosaic. This is used to modulate a high-frequency carrier wave. At the receiver, the amplified signal is used to vary the intensity of another electron beam sweeping across a fluorescent screen exactly in step with that at the transmitter. See BROADCASTING; B.B.C.; INDEPENDENT TELEVISION AUTHORITY.

TELFORD, Thomas

(1757-1834) Scot. engineer. B. Eskdale. He was chosen by the Govt. to report on the Scots roads, and became engineer for the Caledonian Canal. He was also responsible for many hundred m. of roads, numerous bridges and harbours.

TELL, William

Swiss legendary hero. According to tradition he was compelled to shoot an apple from his son's head and led a popular rising against the tyranny of Austria.

TELLURIUM

Non-metallic element having the sym. Te and at. wt. 127.6. Related to sulphur and selenium. It is found chiefly as a telluride in combination with bismuth, gold, silver, etc.

TELSTAR See SATELLITE.

TEMPERANCE

Movement which aims at reducing or ending the consumption of alcohol as a beverage. It originated in 1826. See PROHIBITION.

TEMPERATURE

Condition of hotness or coldness of a body that determines the transfer of heat energy to other bodies. Two bodies are at the same temp. when the mutual interchange of heat is the

same, but if the one body transmits more heat than it receives from the other, the first is said to be at a higher temp. The thermal range is measured in units or degrees of temp. by means of a thermometer. The human body in health is about 98.4° F. but in fevers may rise to 106° F. or higher, while in collapse it may fall to 80° F. or lower.

TEMPLE

Building for worship. The earliest Jewish temple was that built by Micah, but the most famous was that of Solomon, the centre of Jewish nat. worship at Jerusalem. The Mosque of Omar now occupies the site; only the 'Wailing Wall' remains. Egyptian temples reached their apogee in Karnak. Later came rectangular Gk. and Rom. temples.

TEMPLE, William

(1881-1944) Eng. archbishop. Headmaster of Repton School. He was Rector of St. James's, Piccadilly, 1914, and Archbp. of Canterbury, 1942.

TENCH

(*Tinca vulgaris*) Freshwater fish related to the carp, a native of Europe and Asia Minor. It grows to a length of 16 in. and a wt. of 4 lb. It frequents the muddy bed of rivers and passes the winter buried there.

TENERIFE

Largest of the Canary Is. (q.v.) in the Sp. prov. Santa Cruz de T.

TEREBINTH

(or Chian Turpentine) Tree (*Pistacia terebinthus*), of the family Anacardiaceae. It is a native of S. Europe and the Levant. An oleoresin from the trunk is used in medicine.

TIERED

[-rē-] Molluscs found in the submerged timber of ships, piers, etc. The young estab. themselves in timber, forming burrows by the action of their 2 small shell valves. These run in all directions and render infected timbers useless.

TERENCE

(195-159 a.c.) Latin comic poet. (Publius Terentius Afer). He was a slave, but his talents gained him his freedom. His extant comedies include *Andria*, *Eunuchus*, *Phormio*, *Adelphi*.

TERMITE

Insect of order *Isoptera*. It is not an ant although it is colloq. called White Ant. Termites are social in habit. Colonies consist of kings and queens, wingless workers of both sexes, and soldiers. The insects build galleries in wood and can cause enormous damage to houses, furniture, etc. Many species are found in Amer. In Africa they build galleried mounds which may reach 20 ft. high and extend the same distance below ground.

TERN

Sea bird of the Gull family (*Sterna hirundo*). The Common T. has a black head and nape of neck, grey, black, white rump and underparts. The legs are short, the wings long and pointed. It is a summer visitor to Brit. inland and coastal waters.

TERRA COTTA

Variety of reddish bricklike earthenware. It was used for decorative purposes by the Gks., in Italy during the M.A., and in Eng. during the 19th cent.

TERRAPIN

Various amphibious Tortoises. One species, *Malacoclemmys terrapin*, found in the salt marshes of the E. shores of N. Amer. is used as food. See TORTOISE, TURTLE.

TERRIER

Breed of dog. Light and nimble, with short muzzles and relatively large heads, they are intelligent and brave. Popular breeds include Eng. Smooth Coat Fox Terrier; the Rough-haired Scotch Terrier; the Skye Terrier, with long body and large ears; the small Maltese Terrier; and the Bull Terrier.

TERRITORIAL ARMY

Part of the Brit. Army, establd. under the Territorial and Reserve Forces Act of 1907 by Lord Haldane. In 1965 amalgamation with Army Emergency Reserve to form 50,000-strong force known as Terr. Reserve was proposed.

TERRITORIAL WATERS

Belt of sea surrounding the coast of a state and subject to its jurisdiction. Recent internat. legislation has increased national limits.

TERROR

Extinct volcano of Ross Is., Antarctica, 11,000 ft. high.

TERRY, Dora Ellen Alicia

(1848-1928) Eng. actress. In 1875 she made a sensation as Fortia, under the Bancrofts. In Dec. 1878 these began her assoc. with Irving at the Lyceum.

TIME

Primitive peoples observed that Nature had her own times and seasons, i.e. that day, lunar month, and year were units of measurement. The sun appears to rise in the E. at dawn, to cross the sky, and to set in the W., and in the middle latitudes it was observed that the day was long or short according to the period of the solar year. Furthermore men observed that there was correspondence between the spring and autumn equinoxes and the summer and winter solstices. A sundial keeps time by solar days, but these are not absolutely uniform in length. They would be so only if there were no variations in the inclination of the earth's

axis, nor of the speed of its motion in its orbit. Such variations are overcome by *Greenwich Mean Time*. The zero of the Greenwich Mean Time scale is the instant at which the 'mean sun', which is sometimes ahead of and sometimes behind the real sun, is on the geographical meridian of Greenwich. At intervals throughout the day the B.B.C. broadcasts 6 pips, the last of which is the exact moment of G.M.T. and ships' chronometers are regulated by this signal. Midway in the Pacific Ocean, where time differs from G.M.T. by 12 hours, is the 'International Date Line' where ships proceeding W. lose a day (by putting the date forward) and ships moving E. lose a day (by putting the date back).

TUAREG

Arab name for Saharan Berber peoples. The men wear the veil day and night. The women never.

TUBA

A brass instrument with a cup-shaped mouth-piece; its tube has a conical bore like the horn.

TUBERCULOSIS

Infectious disease caused by the micro-organism *bacillus tuberculosis*. This disease was known to the Gks. and to Hippocrates and Galen. Koch whp, in 1882, discovered the germ, and Erlich his assistant who discovered a method of demonstrating the germ by the staining method are assoc. with the description of the disease and the discovery of the cause. The disease is contracted in man from the spit or droplets from the mouth of infected people, or by drinking the milk of infected cows. It usually affects the lungs, but can affect any part of the body and its onset is characterised by loss of energy, night sweats, loss of weight and appetite and in the later stages by anaemia, fever and cough. In India a survey in 1952 showed that 4 million people die of T.B. each year. A 7-year campaign was instituted with the help of the World Health Organisation and U.N.I.C.E.F. The W.H.O. is helping governments to set up tuberculosis control centres and to organise educ. programmes for more sanitary living conditions and pure food supplies. Statistics show that the mortality from lung T.B. has declined by 50 % in 21 nations in 12 years. The drop reached 72 % in Sweden, 74 % in Norway, 56 % in France and 64 % in the U.S.A. Regular medical check-ups and mass radiography methods as well as vaccination play a vital part in eradicating the disease.

TUBEROSE

(*Polyanthus tuberosa*) Plant originally brought from the E. and now extensively cultivated under glass throughout Europe.

TUCSON

[too-son] Winter resort and industrial town S.E. Arizona, U.S.A. in an agric and cattle-raising area. Pop. 233,000.

TULIP

Genus of bulbous plants of the family Liliaceae. Natives of Asia and the E. Medit., they were introduced into Eng. from Holland in the 16th cent.

TULIP TREE

(*Liriodendron tulipifera*) N. Amer. flowering timber tree. A species of magnolia, it, sometimes reaches 180 ft.

TULL, Jethro

(1674-1741) Brit. agricultural reformer. Chiefly known for the invention of a drill which sowed the seeds in rows.

TULLAMORE

Urban district and county town of Offaly, Repub. of Ireland, 58 m. W. of Dublin. Pop. 5,900.

TULLE

Formerly Tutela, cap. of Corrèze, dept. of central Fr., 58 m. from Limoges. Industrial, with textile and armament industries. Pop. 16,000.

TUMOUR

New tissue formation. It originates and grows a similar tissue in the body, and serves no useful purpose. It may be simple, when it is localised and harmless, or malignant, when it spreads and death results. See CANCER.

TUNBRIDGE WELLS

Borough and market town of Kent, 35 m. S.E. of London. A popular spa in the 17th and 18th cents. Royal borough since 1909. Pop. 40,000.

TUNDRA

Cold desert area of N. Eurasia and N. Amer. It lies within the Arctic circle, and during the winter is ice and snow covered. In summer only the surface becomes thawed, the temp. being even then c. 48°-50° F. A treeless region with lichen mosses and low shrubs, supporting caribou and reindeer.

TUNGSTEN

A hard, brittle metallic element sometimes called Wolfram. It was discovered in 1783 by d'Elhuyar. It is a constituent of many steels and other alloys, and, because of its high melting pt. (3,370° C.), it is used for electric lamps and thermionic valve filaments. Sp. gr. 18.7. Chem. Sym. W.

TUNIS

Seaport and cap. of Tunisia, on the Gulf of T. Occupied by the Fr. in 1881, the town has a mixed Fr. and Moslem pop. There are textile manufactures and a considerable trade. Pop. 680,000.

TUNISIA

Formerly a Fr. protectorate of N. Africa, between Algeria and Libya. In the N. is a fertile coastal plain, with ranges inland. To the S. are the Shott el-Djerid and Shott el-Rharsa, 2 large salt lakes, and an extensive desert. The country is mainly agricultural, producing cereals, olives, dates and citrus fruits. Native industries include spinning, weaving, leather-work and embroidery. Lead, zinc and iron are mined, and phosphates are exported. Tunis is the cap. T. was occupied by the Fr. in 1881 but in 1956 became an indep. sovereign state, but remained within the 'franc zone' and maintained the customs-union with Fr. The P.M. heads the government and a Constituent Assembly was set up in April, 1956. In July, 1957, the Assembly decided to abolish the monarchy and proclaimed a repub. Area: 45,000 sq.m. Pop. 4,198,000.

TUNNEL

Passage cut through a hill or under a river, for traffic purposes, to convey water to power stations, etc. The earliest tunnels were made to take railway lines through hills, but later were much used for relieving the congestion of the traffic in large cities, e.g. the London Underground. Tunnels also run beneath the Thames and many other rivers. For transport purposes the first in Eng. was made under the Bridgewater Canal c. 1760. St. Bernard tunnel (opened 1964) links Switzerland and Italy by road.

TUNNY

(*Thynnus*) Large marine fish of the family

Scombridae related to the Mackerel. Found abundantly in the Medit. and less commonly off S. Brit. coasts. It is a useful food fish.

TUPPER, Martin Farquhar (1810-89) Eng. writer. Of his 40 works only the verse *Proverbial Philosophy* is well-known.

TURBINE

The history of the turbine dates back to the time of Hero of Alexandria (1st cent. A.D.). However all efforts to produce a satisfactory prime mover in this form proved unsuccessful until Sir Charles Parsons (1854-1931) developed the steam turbine into the most powerful, most reliable, most adaptable and efficient single generator of primary power output, based on the 2 properties of jets of steam, *impulse* and *reaction*. Many types of ships use propelling machinery of the turbine type. See LINER. On land most power stations are now equipped with turbo-alternators for the generation of electric current for industrial and household use. Water Turbines are machines of both impulse and reaction type which convert a large mass of water flowing at high velocity into h.p. Experiments with Gas Turbines began as far back as 1791. The principle is that compressed air is heated at constant pressure by oil fuel, and the expanded air impinges upon the vanes of the turbine, causing the shaft to revolve. Gas turbines are now used for ship propulsion, in power stations, in aircraft, railway traction, etc. An aviation gas turbine was first fitted to a 'Gloster' aircraft powered by a Whittle jet-propulsion gas turbine in 1941. There are 3 main types of aviation gas turbine. (1) The *jet-propulsion unit* or *turbo-jet* in which all the air for combustion and propulsion passes through the engine; (2) the *ducted-fan engine* (which is a turbo-jet incorporating the multi-bladed turbine type of fan or propeller enclosed in a duct) in which part of the air flows through and part over the engine; (3) the *propeller-turbine* in which the ratio of the turbine to compressor is such that sufficient power is available to drive a propeller in addition to that absorbed by the compressor. Gas turbines have replaced piston engines in most modern civil and fighting aircraft, e.g. The Bristol *Britannia*, De Havilland *Comet*, Gloster *Javelin*, etc., and developments continue. Experiments are proceeding with gas turbines for road vehicles and they have been installed in some naval craft. See AVIATION, JET PROPULSION.

TURBOT

(*Rhombus*) Flat popular food fish, family Pleuronectidae, common in N. Brit. waters.

TURENNE, Vicomte de

[tūr-] Henri de la Tour d'Auvergne (1611-75) Fr. general. In 1644 Richelieu entrusted him with the supreme command of the Fr. troops engaged in the Thirty Years' War, during which, with Condé, he gained several notable victories. During the civil wars of the Fronde, T. fought against Condé. He conquered parts of the Sp. Netherlands, advanced into Germany, but was killed at Salzbach.

TURGENEV, Ivan Sergeievitch

(1818-83) Russ. novelist and poet. *Fathers and Sons* (1862) is his best work; others are *The Duelist* (1846). *A Year of the Steppe* (1870).

Virgin Soil (1876). After imprisonment in 1852 he lived chiefly in Baden-Baden and Paris.

TURIN

(It. Torino) City of Piedmont, N. Italy, at the foot of the Alps, on the Po. A route centre controlling the Mt. Cenis Pass, T. has numerous industries. T. was cap. of the kingdom of Sardinia until 1860, and of Italy, 1860-5. Pop. 1,019,230.

TURKESTAN

Area of C. Asia. West T. includes the N. prov. of Afghanistan. East T. is Chinese T., officially included in the prov. of Sinkiang. The Pamir district occupies a large part of the area, and much is desert. The pop. is almost entirely nomadic, trading in skins, furs and horses. The mulberry tree is extensively cultivated.

TURKEY

Repub. partly in Europe and partly in Asia, occupying Asia Minor and having a long coastline on the Black, Aegean and Medit. Seas. European T. is separated from the rest by the Bosphorus, the Sea of Marmara and the Dardanelles. Asiatic T. comprises the extensive Anatolian plateau, with a narrow coastal plain. The land rises to the S. in the Taurus Range, and towards the Persian and Russ. boundary on the E. The soil of Asia Minor is fertile, but agriculture is primitive. Cereals, tobacco, fruit, cotton, nuts, beet sugar and olives are grown. Livestock include sheep, goats and cattle. Chrome, zinc, manganese, copper, coal and silver are mined, and various types of timber are produced. Ankara is the cap. and Istanbul the largest city. The people, who are of Mongolian origin, are mainly Moslems. T. is a repub. with a pres. and council of mins. and a nat. assembly. Area: 294,500 sq.m. Pop. 30,250,000. The Turks enter European hist. when Amurath I established his cap. at Adrianople (Edirne). His son, Bajazet I, annihilated the combined hosts of Hungary and Poland at Nicopolis (1396) and Ottoman aggression continued till it reached its limit under Solymann the Magnificent (1520-66) who humiliated Vienna and marched against Germany. By the Battle of Lepanto (1571) Sp. taught Europe that the Turk was not invincible. In 1730 began the long series of Russo-Turkish wars. The Crimean War saw Eng. and Fr. united in protecting the Sultan's Emp. against Nicholas I. In the war of 1877 and the resultant Berlin Treaty, it was foreign interference which saved the 'sick man of Europe' from Russ. domination. The Young Turk Reform Party drove Abdul Hamid from his throne in 1908. In World War I the Turks stayed the allied attempts to force the Dardanelles (1915). A Nationalist revolution (1919), resulted in the estab. of a separate govt. at Ankara. In 1922 the sultanate was abolished, and T. was declared a repub. with Mustapha Kemal Atatürk. (q.v.) as pres. In 1945 T. declared war on Germany and Japan, and has since joined N.A.T.O. Now involved in Cyprus in the struggle between Gk. and Turkish Cypriots.

TURKEY

(*Meleagris*) Large game bird extensively bred for the table. A native of N. Amer., there are 2 species. The common domesticated birds are derived from *M. gallopavo*. The male bird may weigh up to 34 lb. with metallic bronze plumage and fan-like expandable tail. The neck and head are reddish or bluish, nearly bare, with a wattle on the throat.

TURKISH See URAL-ALTAIC.

TURKMENISTAN

Constituent repub. of the U.S.S.R. in C. Asia, E. of the Caspian Sea, bounded on the S. by Persia and Afghanistan. Much of the country is a plain, fringed by hills in the S. The Qazaqum desert occupies most of the repub. Agri-

culture and stock-rearing are carried on with the aid of irrigation. Industries are being developed. Ashkhabad is the cap. Formed 1924, the repub. entered the Union, 1925. Area: 187,900 sq.m. Pop. 1,520,000.

TURKS AND CAICOS ISLANDS

Dependency of Jamaica until reverted to U.K. admin. 1962, consisting of some 30 small is. S.E. of the Bahamas. Pop. 5,716.

TURKU

City and seaport of Finland on the Gulf of Bothnia, 95 m. W. of Helsinki. Pop. 138,299.

TURNER, Joseph Mallord William

(1775-1851) Eng. landscape painter. B. and d. in London. Studied under Reynolds. He was an ascetic by nature, never mar. and shunned all soc. His early pictures are sober in colouring. The works of his middle and late period are marked by splendour of colour and brilliance of light.

TURNIP

(*Brassica campestris*) Edible tuber of the family Cruciferae. Native to Europe and Asia, it grows freely in Brit. where it is cultivated as a food for human beings and cattle. It reaches 2 ft. and has bristly leaves and yellow flowers. The white turnip is grown for the table and the gold turnip or swede as a cattle food.

TURNSTONE

(*Arenaria interpres*) Small shore bird allied to the Lapwing. It is c. 9 in. in length. The plumage is black and white, with reddish-brown shading. It frequents the shores of Brit. from Aug. to April.

TURPENTINE

Liquid used for cleaning and industrial purposes. It is obtained by distilling a resin which exudes from pine and other coniferous trees.

TURPIN, Dick

(1705-39) Eng. highwayman. Hanged for murder in York.

TURQUOISE

Mineral used as a gem stone. It is a hydrated aluminium phosphate found in the rocks of Persia, Arabia and the U.S.A. The best comes from Persia. In colour the turquoise varies from blue to green, the best being blue.

TURTLE

(*Chelonidae*) Aquatic reptile of the Tortoise family. The limbs are modified into paddles adapted for swimming. The Hawksbill T. (*Chelone imbricata*) yields tortoiseshell. The edible Green T. (*C. mydas*) is used for making turtle soup. See TERRAPIN.

TURTLE DOVE

A native of N. Africa and parts of Asia, the Common T. D. (*Streptopelia turtur*) is a summer visitor to Brit., nesting in coppices and woods. It is a pest of grain crops. The plumage is ashen blue on head, wings, rump and back; wing coverts rufous; brownish tail, margined with white; there is a white and black patch on each side of the neck. The length is 11-12 in.

TUSCANY

TYPE

A small rectangular block of metal or wood, having on its upper end a raised letter, figure, punctuation mark or other character, for use in printing. Among Eng. typefounders of earlier centuries, two are outstanding, Wm. Caslon (1692-1766) and John Baskerville (1706-75). In Fr., Pierre Simon Fournier (1712-68) invented the system of typographic points for determining the sizes and proportions of types, a system which was perfected by F. A. Didot (1730-1804). Francesco Griffo designed the typeface known as *Bembo* in Italy in 1495, and Giambattista Bodoni of Parma designed the type which bears his name, c. 1800. Modern designs include *Perpetua*, a beautiful book face designed by Eric Gill in 1929, who also designed the *Gill Sans Serif*; *Fontana*, founded upon a design by Alexander Wilson, a Scot. typefounder of the 18th cent. and designed by Hans Mardersteig for the exclusive use of the publishing firm of Wm. Collins Sons & Co. Ltd. in 1936. In 1952 a Swiss, Adrian Frutiger, started work on the Sanserif type which he later developed as *Univers*.

TYPHOID FEVER

Highly infectious and dangerous disease characterised by ulceration and inflammation of the bowel with generalised toxæmia, wasting and prolonged convalescence. Caused by *Bacillus typhosus*. Main features are high and prolonged fever, rose-coloured eruption, diarrhoea or constipation, enlargement of the spleen and acute abdominal pain.

TYPHOON

Violent cyclonic hurricane, on land or sea, but esp. one occurring in the China Sea from July to Nov.

TYPHUS FEVER

Acute, highly contagious disease caused by virus *Richettsia* and conveyed by lice. Com-

mon in C. Europe. Characterised by sudden onset of rigor, headache, nausea, delirium and fever followed by rash on 4th and 5th day. Incubation period 12 days. General mortality 20% d. resulting mainly from toxæmia. Disease is prevalent in war, famine and poverty.

TYRANT

Orig. a despotic ruler. The term was applied in particular to rulers over the Gk. city states in the 7th and 6th cents. B.C., such as Hiero of Syracuse, etc. The derogatory sense is modern.

TYRE

TYRE

A band of wood, metal, rubber, etc. which is made to fit firmly the outer circumference of a wheel. The wheels of locomotives and other railway rolling stock are given rolled-steel tyres, which are shrunk when white-hot on to the cast iron wheel. The invention of the *Pneumatic Tyre* in 1888 is generally attributed to John Boyd Dunlop, a Scot. veterinary surgeon. A pneumatic tyre consists of an inner tube filled with air which is pumped through a nozzle, thus inflating the tyre to whatever pressure per square inch is desired, and an outer cover of compounded rubber, reinforced with cotton, nylon or steel. The outer surface of the tyre has an incised pattern, thus ensuring that the vehicle is given the greatest possible grip on the road surface, etc. The most important modern development in tyre manufacture occurred in 1954 when *Tubeless Tyres* were made available.

TYRONE

Co. of N. Ireland, S of Londonderry. The chief rivers are the Foyie, Blackwater and Derg. With the exception of the E. plain the county is hilly. Cattle are raised, and oats, flax and potatoes are the chief crops. Linens, woollens and earthenware are manufactured. The county town is Omagh, Clogher, once important eccles., has an 18th cent. cath. With Fermanagh and S. Londonderry, T. returns 2 members to Parl. Pop. 134,500.

TYRRHENIAN SEA

Branch of the Medit. Sea, bounded by Corsica, Sardinia, Sicily and Italy

U

U

21st letter and 5th vowel of the Eng. alphabet. It was not until the 19th cent. that *u* and *v* were definitely separated. In Eng. its primary sound was the *oo* sound in *truth*, *flute*, etc. The short *u* is pronounced in *nut*, *but*; *u* has the sound of short *i* in *busy*. In Eng. *q* is invariably followed by *u* to give *kw* sound, but *u* is occasionally mute, as in *liquor*, *opaque*.

U.N.R.R.A.

United Nations Relief and Rehabilitation Administration. Estab. 1943. Its greatest achievement was the saving of Greece. It ended in 1947 from lack of financial help.

U.S.S.R.

(Union of Soviet Socialist Republics) Country in Eur. and Asia, formed after the revolution of 1917. Until World War II the U.S.S.R. comprised 11 repubs., the R.S.F.S.R., Ukraine, White Russia, Armenia, Azerbaijan, Georgia, Turkmenistan, Uzbekistan, Tajikistan, Kazakhstan and Kirghizia. In 1940 Estonia, Latvia, Lithuania, Moldavia, and Finno-Karelia became constituent repubs. Eur. Russ. extends from the Arctic Ocean to the Caucasus, and from Poland to the Urals. Asiatic Russ. includes Siberia, stretching from the Urals to the Pacific Ocean. Moscow (q.v.) is the fed. cap. The U.S.S.R. is gov. by the Supreme Soviet, which consists of 2 chambers. It delegates its power to the *Presidium*, a collective leadership. A council of ministers is apptd. by the Supreme Soviet. Educ. is compulsory. Russ. was formerly primarily an agricultural country, but the Five Year Plans are fostering industry. Farming is carried on by the collective system and in state farms. Foreign trade is a monopoly of the state. The Russ. empire began as a collection of principalities with Moscow as its cap. The first to take the title of Tsar was Ivan, 1547. Of his successors the greatest were Peter, who founded St. Petersburg, and Catherine II. Catherine and her successors greatly extended the area of Russ., first in Eur. and then by acquiring Siberia and other districts of Asia. Since the Napoleonic age the country has ranked as one of the Great Powers. Dissatisfaction with the sufferings caused by World War I brought matters to a head, and in Mar. 1917, a socialist republic was establd. See RUSSIAN REVOLUTION. In Sept. 1939, Soviet forces invaded Poland, which had already been overrun by German troops. In Dec., Finland was invaded, and in 1940 the Baltic states were occupied. Germany invaded the U.S.S.R. in 1941 and in 1942 the U.S.S.R. signed a treaty with the Allies. After the war ideological differences between the U.S.S.R. and the W. became more apparent, the former adopting a hostile attitude at U.N. meetings. Diplomatic relations became increasingly strained, but were slightly improved after the d. of Stalin (q.v.) in 1953, when Malenkov succeeded him as chairman of the Council of Ministers. Malenkov was succeeded by Marshal Nicolai Bulganin. He was succeeded by N. S. Krushchev (q.v.) in 1957, who was succeeded by Kossygin and Brezhnev in 1964. The Communist Party is the governing, and only, polit. party in U.S.S.R. Area: 8,649,859 sq.m. Pop. c. 250,000,000. See RUSSO-JAPANESE WAR; RUSSO-TURKISH WARS; BOLSHEVISM; COMMUNISM.

U-BOAT

Abbreviation for *Unterseeboot* the German name for a submarine. See SUBMARINE; ATLANTIC, BATTLE OF.

UGANDA

State of E. Africa, N. of L. Victoria, and bounded on the W. by L. Albert and Edward. The country forms part of the C. African plateau. The White Nile, which flows N. from L. Victoria through L. Kioga and Albert, is the chief river. U. is an agricultural country. There are mineral reserves, and salt is produced. Kampala, which succeeded Entebbe as cap. 1962, and Jinja are the commercial centres. U. is divided into 4 provs. The country was first visited in 1862 and came under Brit. influence in 1890. U. became an indep. state within the Commonwealth. 1962. In 1963, the Kabaka of Buganda became 1st Pres. Deposed 1966. Area: 93,981 sq.m. Pop. 6,524,000.

UIST

Two islands of the Outer Hebrides, in Inverness-shire. The chief place of N. Uist is Lochmaddy; on S. Uist it is Lochboisdale. The inhabitants are engaged in cattle and sheep rearing and fishing.

UKELELE

[yoo ki-lā'-li] Hawaiian guitar with 4 gut strings.

UKRAINE

Constituent repub. of the U.S.S.R. in the S.W. The chief rivers are the Dnieper, Dniester, Bug and Donets, and the main feature of the country is its steppe land. The Carpathian Mts. cross the S.W. part. Agriculture is the most important industry, the Ukraine being the principal cereal-growing district of Russ. Stock raising is carried on and flour milling, sugar and oil refining, leather and textiles are important. The min. include salt and coal, iron, manganese and mercury. The metallurgical, chemical and other industries contribute a large proportion of Russia's output. There is considerable hydro-electric development on the rivers. The cap. is Kharkov and Odessa is the principal port. The Ukrainian S.S.R. was establd. 1919, and entered the Union, 1923. In 1939 and 1940 W. Ukraine and N. Bukovina were incorporated in the repub. During World War II the U. was occupied by the Germans. Area: 225,000 sq.m. Pop. 41,893,000.

ULAN BATOR

(formerly Urga) Cap. of the Mongolian Repub. on the Tola. It is the Mongol holy city. Pop. c. 100,000.

ULCER

Break in continuity of a covering surface, the result of inflammatory reaction to bacterial infection causing d. of tissues followed by their disintegration and sloughing of surface tissues.

ULSTER

One of the 4 provs. of Ireland. It consists of the 6 cos. of N. Ireland, i.e. Londonderry, Antrim, Tyrone, Fermanagh, Armagh and Down, with Cavan, Donegal and Monaghan in the Repub. of Ireland.

ULSTER KING OF ARMS

The chief heraldic official in Ireland. He is registrar of the Order of St. Patrick.

ULTRA-VIOLET RAYS

Radiations of a wavelength next to and shorter than the visible rays. They are present in sunlight and are used for treatment of rickets, their beneficial action being due to the formation in the skin of vitamin D.

ULYSSES

(*Odysseus*) One of the heroes of the Trojan War. Homer's *Odyssey* describes his 10 years' adventures on the way home after the destruction of Troy.

UMBER

Brown earth containing iron and manganese oxides, used as a pigment.

UMBILICAL CORD

Fleshy cord containing 2 arteries and a vein which unites an unborn infant's abdomen with the placenta within the womb of the mother. The cord is severed at birth and the resulting scar is known as the umbilicus or navel.

UNCONSCIOUS

(1) Term used to denote a state of being in which there is inability to appreciate events in one's surroundings. It may be caused by injury to the brain, by drugs or by hypnosis.

(2) In psychology, it denotes a mental state in which repressed memories come to the surface and are experienced as living events. The unconscious state of mind harbours thoughts, ideas and memories which may be out of place in society and are repressed to allow a person's behaviour to conform to accepted codes. Unconsciousness. Loss of sensibility assoc. with poisoning, apoplexy, haemorrhage, heart attacks, coma of diabetes and kidney failure etc.

UNEMPLOYMENT

Absence of livelihood-producing employment. The conditions of modern industry, mass production, fashion, machinery, the credit system and other factors produced mass unemployment after World War I. Destruction caused by World War II resulted in the temporary disappearance of unemployment, but automation and the decay of certain industries have caused it to recur significantly in the last decade.

UNESCO

(United Nations Educational, Scientific and Cultural Organisation) Organisation set up in 1945 under the Charter of the U.N. designed to promote respect for justice, law, and human rights by educ., scientific, and cultural collaboration between nations. H.Q. Paris.

UNIAT

Name used for Christian Chs. that are Gk. in practice, but have accepted the authority of the Ch. of Rome. They are found in the Balkan area and other parts of Europe and Asia Minor.

UNICORN

Fabulous animal with head and body of a horse and a horn in the middle of its forehead. The Scot. royal arms are supported by 2 unicorns.

UNIFORMITY

Acts of U. have been passed from time to time to enforce a set form of religious worship. In Eng. they were passed in 1549, 52 and 59. The last, passed in 1662, ordered all clergymen to be properly ordained, to accept the 39 articles and to use the Book of Common Prayer.

UNION, ACT OF

Name of 2 Acts of Parl. By the first, passed in 1707, the Eng. and Scots Parls. were united. By the 2nd, passed in 1801, the Brit. and Irish Parls. were united.

UNION JACK

British nat. flag, composed of the banners of St. George (white with a red cross), St. Andrew (a white saltire or diagonal cross on a blue field), and St. Patrick (white with a red saltire), representing Eng., Scot., and Ireland. The

banners of Eng. and Scot. were combined, 1603 and confirmed, 1707. St. Patrick's flag was added, 1801, at the union with Ireland.

UNIONIST

Polit. party in Brit. Originated in 1885 when Gladstone proposed to give Home Rule to Ireland. A number of Libs., led by the Marquis of Hartington and Joseph Chamberlain, left the party and called themselves Lib. Unionists because they were determined to maintain union between Eng. and Ireland. In 1895 they joined the Cons. party in forming a govt. After World War I there was a return to the name Cons. The name Unionist, however, is still used, esp. in Scot. See CONSERVATIVE; TORY.

UNITARIANISM

Denotes belief in one God and is generally used to designate the faith held by those Protestants, who, while denying the doctrine of the Trinity and other beliefs of orthodox Christianity, accept the pre-eminence of Jesus Christ as a religious teacher and prophet.

UNITED ARAB REPUBLIC

Name given to the union of Egypt and Syria announced on Feb. 1, 1958. Prps. Nasser of Egypt was acclaimed pres. of the repub. on Feb. 21st by a plebiscite held in both countries. He obtained the right of nominating his cabinet, and the first was composed of 24 Egyptians and 14 Syrians. On March 5 the Yemen joined the U.A.R. in a fed. to be known as the United Arab States, but this agreement was abrogated by the U.A.R. 1961. After a Syrian coup, 1961 S. seceded. Since 1963 title has been confined to Egypt, negotiations with Syria and Iraq proving inconclusive.

UNITED FREE CHURCH OF SCOTLAND

Came into existence in 1900 by the Union of the United Presbyterian and the Free Ch. of Scot. In 1929, the majority of the U.F. Ch. of Scot. joined with the Ch. of Scot. A minority of some 13,000 members and 41 congregations carried on the U.F. Ch. of Scot.

UNITED KINGDOM

Name given in 1800 to the kingdom of Gt. Brit. and Ireland. The parl. of Eng. and Scot. were united in 1707, and those of Gt. Brit. and Ireland in 1801. The latter union was dissolved in 1922. See ENGLAND; N. IRELAND; SCOTLAND; WALES.

UNITED NATIONS ORGANISATION

The successor to the League of Nations, set up at the San Francisco Conference in 1945, comprising 110 States. The essential organs of U.N.O. are the General Assembly, Security Council, Economic and Social Council, Trusteeship Council, and the International Court of Justice; of these the Security Council is the most important, as it concentrates upon the peaceful settlement of disputes and the prevention of aggression. The Assembly has wide powers of discussion and recommendation, but cannot intervene in a dispute already being handled by the Security Council. The sessions of the Assembly and Security Council have not revealed a high degree of unity, and the use of the veto has created much disharmony. An 'internat. police force' made up of small detachments of troops from some member states was set up by UNO for the first time in 1956, following milit. intervention by Brit. and Fr. to separate the armies of Israel and Egypt. A similar force was sent to the Congo in 1960 and to Cyprus, 1964. UNO works through its Specialised Agencies such as the United Nations Educ., Scientific and Cultural Organisation (UNESCO); Food and Agriculture Organisation (FAO); Internat. Labour Organisation (ILO) etc. (See p. 466 U.N. structure.)

UNITED STATES OF AMERICA

The U.S.A. has an area of 3,615,316 sq. mi., almost all of which is on the Amer. continent.

Her overseas possessions are mainly small Pacific islands (Guam, Samoa, etc.) plus Puerto Rico and the Panama Canal Zone. There are 50 states, and one Fed. Dist., created as a site for the Fed. Cap., Washington, and known as the Dist. of Columbia. In latitude, U.S.A. stretches from 25° N. to 49° N. Longitude is 67° W. to 124° 30' W. Her pop. in 1964 was 192,040,900. The U.S.A. has 4 clearly defined physiographic regions. (1) The *W. Cordillera* consists of high ranges parallel to the Pacific Coast culminating in the Rocky Mts. on the E. with peaks of 13,000 and 14,000 ft. It is an extensive mt. area occupying approximately 1/3 of the area of U.S.A. and is 1,000 mi. broad between the states of Calif. and Colorado. It is drained principally by the Columbia R. and its tributaries in the N. and the Colorado R. in the S. Between the Rockies and the high W. ranges of the Cascade Mts. and Sierra Nevada are higher intermontane basins and plateaux. W. of the Cascade Mts. and Sierra Nevada and separated from the Pacific by coastal ranges is a deep, broad trough. It is at its widest in Calif. where it is drained by the Sacramento and San Joaquin rivers which enter the sea forming the natural harbour of San Francisco. (2) The *C. Lowlands* represent the drainage basin of the Mississippi-Missouri system and the smaller area in S.W. U.S.A. which drains to the Gulf of Mexico. The W. and N. of this area consists of the High Plains which fall gradually from 3,000 ft. near the Rockies to 600 ft. near the Mississippi. W. these Gulf coast lowlands become narrower towards Mexico. (3) E. they continue into the *Atlantic Coastal Plain* which extends along the entire Atlantic coast northwards to New York and is 150-200 mi. wide. (4) It is backed by the *Appalachians*, a ridge of high land (3,000 ft.) trending from S.W. to N.E. and dividing the plain from the Middle Mississippi basin. The high land continues into New England where the S.W.-N.E. trend is broken by the N.-S. valleys of the Hudson, Connecticut and Merrimac Rivers. W. winds bring rain to the seaward slopes of the Coast Ranges, Cascade Ranges and Sierra Nevada, but the C. Lowlands are in the rainshadow of the Cordillera. In the lee of the Rockies cattle ranching is the main type of farming. Even the intermontane basins and the Great Valley of Calif. within the Cordillera are effectively shielded from the rain-bearing winds by the high coastal ranges, and irrigation is necessary. Aridity increases southwards, and the deserts of U.S.A. lie in the S.W. states. The Great Valley of Calif. has a Medit. climate receiving 15-20 in. of rain from the westerlies in winter but having drought in summer. The Appalachians form a much less sharp barrier to rainfall spreading inland from the Atlantic and in summer rain-bearing winds from the Gulf of Mexico are drawn N. along the Mississippi valley. The N. part of the C. Lowlands suffers from extremes of temperature, e.g. Chicago 26° F. Jan. 74° F. July. The part S. of Cairo is sufficiently near the tropics and the Gulf of Mexico to experience mild winters with virtually no frost. When the 13 Eng. colonies of the E. seaboard declared their indep. in 1776 they formed the original United States of Amer. The pop. was then about 3 millions and has risen to 190 millions by natural increase and immigration. The territory of the U.S.A. was increased by colonisation, annexation and purchase until it stretched from the Atlantic to the Pacific. Colonisation spread W. across the Appalachians into the Ohio valley and the Mississippi Lowlands. In 1803 the Louisiana Purchase was made from Fr. The N.W. territories (Washington, Oregon and Idaho) were occupied between 1804 and 1811, and the S.W. territories from Calif. to Texas were acquired by conquest, purchase or annexation from Mexico in 1845-8. Most of the immigrants before 1880 were from N.W.

Europe. For the next 40 years most came from E. and S. Europe and provided a cheap labour force for rapidly extending industry. Since 1914-18 immigration has been carefully controlled, each country having a quota and preference being given to those from N.W. Europe. The negro slave was introduced to carry farming W. into the sub-trop. lands of the Lower Mississippi valley and the Gulf Coast, and made possible the extensive cultivation of cotton (q.v.). The 15 million negroes remain the only substantial element in the pop. which is not absorbed. Colour prejudice remains very strong although the negroes were freed as a result of the Civil War between N. and S. States. The only other national groups remaining in the Amer. nation are the 300,000 native Indians who live on special reservations and some 200,000 Chinese and Japanese on the Pacific coast. U.S.A. can be divided into 2 halves along the meridian 100° W. which coincides with the 20 ins. isohyet. West of this line, except along the Pacific coast, aridity and high relief make cattle ranching the predominant farming type. New irrigation projects have brought additional areas of land into intensive cultivation, e.g. the lower Colorado Valley (Boulder and Parker Dams) and the valley of the Salt R. (Roosevelt Dam), and here sub-tropical crops are grown. Wheat can be grown in the high plateaux and basins using dry farming techniques, and is important on the rich volcanic soils of the Columbia plateau in the N. East of this line adequate rainfall and extensive lowland have led to intensive agricultural development: crops vary from temp. to sub-trop. There are 6 crop belts. From the N. these are: (a) *Spring wheat belt* stretches from the high plains of Montana through the Dakotas to the Mississippi valley in Minnesota. It is a continuation of the Canadian Prairies. (b) *Hay and Dairying belt* stretches round the S. shores of the Great Lakes and across N.E. U.S.A. into New England. The predominance of grass and fodder crops results from a climate with rain all the year round and the demand for dairy produce. (c) *Maize belt* lies S. of the spring wheat belt, from Omaha on the Missouri to the Appalachians and reaching S. to St. Louis. Summers are longer and hotter than in the wheat belt and a rainfall of 4.5 in. in July ensures swelling of the grain. (d) *Maize and Winter Wheat belt* lies S. of the Maize belt and stretches across to the E. coast between Cape Hatteras and the head of Chesapeake Bay. Wheat can be sown in autumn and harvested in early summer before the maize is ripe. Tobacco is very important in Virginia and Maryland. (e) *Cotton belt* lies S. of the Maize and Winter Wheat belt and stretches from the 20 ins. isohyet on the W. to the Atlantic coast on the E. (f) *Sub-trop. belt* lies along the coastline of the Gulf of Mexico and includes Florida. Rice and sugar cane are important. Florida specialises in pineapples and citrus fruit. U.S.A. is particularly rich in supplies of coal and oil. The most important coalfields are those in the Appalachians, notably in Pennsylvania and Alabama. The Pennsylvania field has high quality coal and is easily worked by mechanised methods. The main oilfields are in Oklahoma, Texas and Louisiana in the S.W. C. Lowlands and near Los Angeles in Calif. U.S.A.'s big iron deposits were at the W. and S. side of L. Superior, but as they are gradually worked out they may be replaced by Canadian ores. The W. Cordillera has always been an important source of copper. Gold caused the rush to Calif. in 1849 but is no longer important. The N.E. is responsible for 1/3 of U.S.A.'s manufactures. It has a dense and long settled pop., local supplies of coal and water power and some iron, and cheap transport on the Great Lakes. The principal industries are: (1) iron and steel; (2) textiles. The iron and steel in-

dustry is based (a) at Pittsburgh on the Pennsylvania coalfield, (b) at the ports on the Lakes Erie and Ontario (Cleveland, Erie and Buffalo). Associated with it is the shipbuilding industry of the E. coast ports (Philadelphia, Baltimore); the motor car industry of Detroit; the engineering at Buffalo and Detroit and the manufacture of small metal goods in New England. The textile industry is in New England and manufactures cotton, wool and silk goods of a high quality. The iron and steel industry is also found at Birmingham, Alabama, and at Gary, near Chicago; the textile industry is springing up particularly in the Tennessee valley, at the N. edge of the cotton belt. Meat packing is important, particularly at Chicago and St. Louis; aluminium smelting at St. Louis (bauxite from Arkansas); pulp and paper mills in New England and the Pacific north-west; fruit drying and canning in California and Florida.

Communications. Rlys. were built in the 19th cent. There are 4 main transcontinental lines: (1) The N. Pacific, linking Chicago and Minneapolis-St. Paul with the N.W. Pacific states. (2) The Union Pacific, linking Chicago with Omaha, Salt Lake City and San Francisco. (3) The Santa Fé railway, linking Chicago and Kansas City with Santa Fé and Los Angeles. (4) The S. Pacific, linking New Orleans with Los Angeles via El Paso. Chicago is a great rly. junction because it is at the S. end of L. Michigan and all routes from N.E. U.S.A. to N.W. U.S.A. have to pass round the S. end of the lake. There is a very good system of main roads and extensive bus services. Internal air transport has been developed in the last 20 years to link all the principal cities. The U.S.A. is a Fed. Repub. consisting orig. of 13 states, but now of 50 and one Fed. Dist. The written constitution of 1787 has seen various amendments. Executive power is in the hands of a Pres. elected for 4 years by electors from each state who are themselves chosen by direct vote. The number of electors for each state is equal to its Senators and representatives in Congress. Electors are nominated by the various parties. The vice-pres. is elected similarly. The Pres. is ex-officio C.-in-C. of the Army, Navy and Air Force; he appoints Cabinet officers and a great many officials; he conducts foreign policy, and he has the power of veto (unless out-voted by a 2/3 majority of both Houses). Legislative power is in the hands of Congress, consisting of the Senate and the House of Representatives. Each state has two Senators, elected for 6 years; one-third of the Senators retire every second year. The numbers of representatives is allocated to the states in proportion to the pop. of each and elected for two-year terms. Each state has its own constitution, with a Gov. and a Legislature of 2 Houses (only one in Nebraska); the states deal with all matters except general taxation, foreign affairs (including commerce), defence, postal services, and a few others.

UNIVERSE

The whole system of created things. In the West, until the 16th cent., the earth was con-

sidered as the centre, with the sun, moon and stars revolving round it. In the 12th cent. it became clear that the earth moved round the sun, and the work of Newton and Kepler led to the accurate forecasting of the movement of planetary bodies. The improvement of the telescope led to the discovery of more and more stars, and spectroscopy enabled their distance and constitution to be investigated. Now, astronomers estimate that the universe contains c. 30,000 million stars, the nearest being c. 50 million million miles from the earth. The extent of the universe had caused much philosophical difficulty. Einstein's theory of relativity led to experimental proof that light travels in a curved path, which if prolonged far enough, will return to its starting point, and it is in this sense that the universe is now considered finite but boundless. As a result of discoveries made at the Mt. Palomar Observatory in 1953, the universe is now said to be twice as large and twice as old as previously supposed, the revised estimate of its age being c. 4,000 million years. See *The Nature of the Universe* by Fred Hoyle.

UNIVERSITY

Corporation of men and women devoted to the teaching and studying of the higher branches of learning. A primary function of univs. is research; univs. have the authority to confer degrees on the completion of a prescribed course of study and/or on the satisfactory passing of certain exams. The first European univ. was the Univ. of Salerno founded in the 9th cent. for the study of medicine. The revival of legal studies in the 12th cent. led to the foundation of univs. at Bologna, Padua and elsewhere, while in the 13th cent. the schools of dialectic in Paris developed into the Sorbonne. The first Scot. foundation at St. Andrews, was founded in the 15th cent. The earliest Eng. univs. were Oxford and Cambridge which date from the 12th and 13th cent. and here colls. were first estab'd as places of residence for students. The Robbins Report on Higher Educ. (1963) recommended the founding of 6 new univs. and Colls. of Higher Technology which would be technol. univ. conferring their own degrees. More than 12 new univs. have already been started in Brit. since 1952. See **WORKERS' EDUCATIONAL ASSOCIATION**.

UPAS TREE

[yew'-] Tree found in Java and in trop. Africa.

UPPSALA

City of Sweden, on L. Malar, 40 m. N. of Stockholm, with the oldest univ. (1477) in Sweden. The cath. was begun in 1287. Pop. 79,308.

UR

Ancient Sumerian city. The biblical 'Ur of the Chaldees' is generally identified with it. It was situated on the Euphrates, c. 150 m. S.E. of Babylon. Excavations have revealed the great temple (c. 2300 a.c.) with its ziggurat or stage tower.

URAL

Range of mts. running from the Arctic to the Caspian Sea, forming a boundary between Europe and Asia. The range is important for its timber, its salt-mines and deposits of gold, platinum, copper, iron and coal. The area has been extensively industrialised. Important centres are Molotov, Magnogorsk, Chelyabinsk and Sverdlovsk.

URAL-ALTAIC

Family of agglutinative languages found in Finland, etc., and in Soviet Asia and Mongolia. Branches: (a) Finno-Ugrian; (b) Altaic.

URANIUM

Metallic element first obtained by Klaproth in 1781. It is one of the elements which, under oxidation (q.v.), Sp. gr. c. 19. Chem. sym. U,

Uranium has a number of isotopes, with atomic weights varying from 227 to 240

URANUS

[yoo-ra-nus] The 7th known planet in order of distance from the sun (c 1,783 000 000 m). It was discovered by Sir Wm Herschel in 1781. It has a diam of c 32,400 m and its mass is c 15 times that of the earth. It completes one revolution of its orbit in c 84 yrs 6 days and its period of rotation has been estimated to be c 10 hrs 49 mins. It has at least 5 satellites.

URBAN DISTRICT

In Eng. and Wales an area set up for purposes of local government, in 1894. Each UD has a council elected by the people for 3 years and presided over by a chairman. The UDs are represented on the county councils.

URBINO

Small town in Italy, 25 km S of Rimini. The birthplace of Raphael.

URDU See HINDUSTANI.

URINE

The secretion of the kidney. Urine is composed of many by-products of the body which are extracted by the kidneys from the circulating blood. The most common constituents are water, urea, uric acid, hippuric acid and bile pigments.

URTICARIA

or Nettle Rash. A skin condition arising usually as the result of some bodily upset.

URUGUAY

[ooroo-gwii] Smallest repub. of S. Amer. on the N. bank of La Plata estuary bounded by Argentina and Brazil. The Uruguay R. forms the W. border. Climate and soil make U. an agricultural country. Meat products and wool account for c 80 % of the exports, wool being by far the most valuable. Montevideo is the cap. There are good road and rail systems and the Uruguay is an important highway. The pop. is almost entirely white. Sp. is the official language and R.C. the dominant religion. U. was taken by the Portuguese in the 17th cent. and 100 years later by the Sp. It was captured by the Argentine Govt. in 1814. Later it became a prov. of Brazil. War followed between Brazil and Argentina, and U. became an indep. state in 1828 and a repub. in 1830. The Pres. governs with a cabinet, a senate of 30 members and a chamber of deputies with 93 members. Area 22,172 sq m. Pop. c 2 590 158.

USKUDAR

(formerly Scutari) District of Istanbul on the E. of the Bosphorus. The scene of Florence Nightingale's work in the Crimean War.

USURY

Orig., any premium paid for the use of money; nowadays, the practice of demanding an exorbitant premium or interest. Attempts were made by the Romans to provide maximum rates of interest. Later, usury was condemned by the Ch. and was allowed to fall into the hands of the Jews.

UTAH

W. state of the U.S.A. in the Rocky Mts. It contains the Great Salt and Utah lakes, and is traversed by the Colorado. The state is rich in minerals, copper, silver, lead, coal and salt. Irrigation is used in the valleys. Salt Lake City is the cap. U. was settled by Brigham Young and his Mormons in 1847, but was not admitted to the Union until polygamy was abolished in 1896. It sends 2 representatives to Congress. Area 84,920 sq m. Pop. 967,000.

UTERUS

Female organ found only in mammals in which the fertilised ovum or embryo becomes embedded and develops during pregnancy.

UTRECHT

[trecht] Dutch city, cap. of U. prov. on the Old Rhine 24 m. S.E. of Amsterdam. Industries include machine shops, printing, clothing and chemicals. Pop. 261,043. The Treaty of U. (1713) terminated the War of the Sp. Succession.

UTRILLO, Maurice

(1883-1955) Fr. artist. B. Paris. His work falls into 3 periods: expressionism, an intermediary period and a 'white' period.

UVULA

Small extension of soft palate hanging down between tonsils.

UZBEKISTAN

Repub. of the U.S.S.R. in C. Asia bounded by the Kazakh, Turkmen, Tajik and Kirgiz S.S.R.s and Afghanistan. The W. is a low lying, waterless plain with oases. In the E. the land rises towards the Pamirs. The chief river is the Amu Darya. The climate is dry, and irrigation is necessary. Cotton is the principal product. Minerals include oil, coal, copper and sulphur. Tashkent is the cap. Other cities are Bukhara and Samarkand. The repub. was formed 1924 and entered the Union 1925. Area 138 069 sq m. Pop. 4 000,000.

V

22nd letter of the Eng. alphabet. In classical Lat. *v* represented both the vowel sound *u* and the consonant *v*. In Eng. *v* is related to the unvoiced *f*, but is always a sonant lip-sound, e.g. *vain*, *value*, *venom*, etc.

V.H.F. BROADCASTING

Very High Frequency Broadcasting. Introduced to improve reception. In 1955 V.H.F. stations to reinforce transmissions of the Home, Light and Third programmes on long and medium waves came into operation at Wrotham, Kent. Operating on frequencies around 90 megacycles per sec., which is equivalent to a wavelength of a little more than 3 metres.

V. WEAPONS

Vergeltungswaffen i.e. the Flying Bomb (V.1) and the Rocket (V.2), pilotless projectiles used by the Germans against London and the S. of Eng., Antwerp, etc. in World War II. The V.1 was a jet-propelled, winged bomb which carried a powerful charge of explosive and, when the engine cut out, fell to earth and exploded. Launching sites were constructed along the Channel coast and over 8,000 V.1s were launched from June till Aug. 1944. During the last 2 weeks of June, 2,000 flying bombs were released. Of these, 661 were destroyed by fast Brit. fighter aircraft and A.A. defences, and barely half reached London. The attack imposed a severe strain on the civil pop. but casualties averaged only 1 per bomb. Rocket-Bomb (V.2). A giant rocket-propelled bomb, fired from sites in The Hague. It was 50 ft. long, carried a ton of explosive, attained a speed of 2,500 m.p.h. and reached a ht. of 60 m. The first V.2s landed in London on Sept. 8, 1944, and attacks were kept up until the sites were captured by the Allied invading forces in Mar. 1945.

VACCINATION

Protective inoculation of a vaccine. Commonly applied to the inoculation of calf lymph in the prevention of smallpox, vaccination was first practised in Eng. by Jenner in 1796. Following its introduction the incidence of smallpox has fallen very considerably throughout the world. In terms of the Health Bill of 1947, vaccination is now voluntary. Vaccination against poliomyelitis has had considerable success.

VACUUM

Space devoid of matter. The perfect vacuum is not attainable, methods of exhaustion always leaving some residual gas. A vacuum is a non-conductor of heat and will not transmit sound waves. Heat, light and other electro-magnetic radiation are transmitted readily. The vacuum flask is a container with a vacuum interspace to prevent the conduction of heat. The contents are thus retained for long periods at their orig. temp.

VAGINA

[va-'jī-nə] The vagina, or birth canal, is the passage leading from the womb to the exterior of the body. The external genitalia consist of two pairs of folds, called the labia, which enclose the vaginal opening, the urethral opening from the bladder, and a vestigial organ in front named the clitoris, which corresponds to the male penis.

VALENCIA

City of E. Spain, cap. of V. prov., near the mouth of the Turia. There's a univ. and a cath. 3rd largest city of Spain. V. manufactures textiles, leather and pottery, and exports fruits. Pop. 503,358.

VALENTINE

Christian martyr under the Emperor Claudius, c. 270. Commemorated on Feb. 14. The ancient custom of sending valentines or love tokens on this day is said to be a survival of Rom. Lupercalian custom.

VALENTINIAN

Rom. Emperor (364-75) who succeeded Jovian in 364. He was intolerant in religious matters, but made useful laws. He divided the empire into E. and W. and ruled the W. division.

VALERIAN

[l-īl-'r] Perennial herbaceous plant (*Valeriana officinalis*) of the family Valerianaceae. The root is used medicinally. Another variety, the small marsh valerian (*V. dioica*) is found in boggy places.

VALÉRY, Paul

(1871-1945) Fr. poet. His poems (Symbolist) include *La Soirée avec M. Teste* (1896), *Le Cimetière Marin* (1920), *Album des Vers Anciens* and *Odes, Charnes* (1922). His critical essays include *Pièces sur l'Art* (1934), *Regards sur le Monde Actuel* and a work on Leonardo da Vinci.

VALLADOLID

[valá-dó-'líd] Sp. city, cap. of V. prov., with a cath. and univ. It was the home of Cervantes. Linen, silk and pottery are manufactured. Pop. 159,135.

VALLETTA

Climbing plant of the family Vitaceae. It has sturdy woody stems, which cling by means of tendrils to a wall or any other support. The large leaves have tooth-like edges and the small green flowers are clustered in racemes. The berries, or grapes, contain hard seeds. The grape varies from dark purple to a very light green, almost white. The chief areas for growing are the Medit. countries, Australia, S. Africa and parts of U.S.A. Viticulture is most flourishing in the Rhineland in Germany, in the S. parts of Fr., in Italy, Sp., Portugal, Hungary, etc.

VINEGAR
Sour liquid used for flavouring and preserving. It is acetic acid and is usually made in Brit. from malted barley, which is fermented. It can be made from alcoholic liquors and in Europe is obtained from white wine. In U.S.A. it is made from cider.

VINEGAR PLANT
A slimy gelatinous mass found on the surface of alcoholic fluids during fermentation, and composed of filaments of bacteria and fungi. The action of these converts the alcohol into vinegar. •

VIOL

A group of stringed instruments of the 16th and 17th cents. They were superseded by the violin family and lack their brilliance and agility.

VIOLA

The second member of the violin family, its 4 strings being tuned a 5th lower than the violin, the lowest being the C below middle C and the others upward in 5ths, G, D and A. Its compass is c. 3 octaves.

VIOLET

Genus of herbs of the family Violaceae. They are perennials of low growth, 7 species being Brit. The sweet violet, *V. odorata*, is found wild in S. and E. Eng. The leaves are broad and heart-shaped and the blossoms purple or white. Other varieties include the dog violet, *V. canina* and *V. silvestris*, and the wood violet. The genus includes the heartsease or wild pansy, *Viola tricolor*.

VIOLIN

A stringed instrument, developed at the same time as the viol in the middle of the 16th cent. from medieval types of fiddle. Brought to perfection by Amati and Stradivari in the 17th and early 18th cents. It has been little modified since. Its 4 strings are tuned in 5ths upwards from the G below middle C. Its compass is c. 4 octaves.

VIOLONCELLO

The 'cello is of the same general construction as the violin. Its 4 strings are tuned upwards in 5ths from the C, 2 octaves below middle C: it has a compass of c. 3½ octaves. It was first made in the middle of the 16th cent. and in the 17th and early 18th cents. was used mainly to supply the bass, but later developed as a solo instrument.

VIPER

Venomous snakes of the group, Viperidae, found in Europe, Africa and Asia. The Brit. species is known as the Adder. True vipers (*Vipera*) have a characteristic flattened triangular head and relatively short, thick body. Russell's Viper of India causes many d. each year. Rattlesnakes are included in the normal meaning of the term.

VIPER'S BUGLO

[*bew'-l*] (*Echium* *gare*) Annual or biennial herbaceous plant of the family Boraginaceae. The tall stem and the leaves are covered with short bristly hairs. The flowers are borne in a long panicle.

VIRGIL

In Brit. before 1873 open voting was usual at elections for Parl. Each country has its own laws stating who is entitled to vote. The privilege is confined to adults, and for long to men only, but in the 20th cent. most countries gave to women the right to vote.

VULGATE

Lat. version of the Bible based on the *Septuagint*, which was written in Gk. and incorporated translations of certain Heb. writings not included in the early canon. The Vulgate was trans. by St. Jerome (331-420) and 2 cents. after its completion it was universally adopted in the W. Chr. Ch. as authoritative for both

faith and practice. The *Vulgate* is still the authorised Lat. version of the R.C. Ch., its use having been sanctioned by the Council of Trent, 1545-63. An important Catholic translation of the Bible from the *Vulgate* was made by Ronald A. Knox, pub. 1944-50. In translating the O.T. books, constant reference was made to the Heb. text, and to that of the *Septuagint*. Furthermore a definitive multi-volume edition of the *Latin Vulgate* is also in the course of preparation. The *Vulgate* is not accepted as canonical by Protestant Chs.

VULTURE

Birds of prey belonging to the families *Vulturidae* and *Cathartidae*, the latter being Amer. They resemble the Eagles, but almost all have a bare head and neck. They feed on dead animals. The Black V. (*Vultur monachus*) and the Griffin V. (*Gyps fulvus*), are large birds of the Medit. region and S. Europe respectively. Amer. V. include the Condor and Turkey Buzzard.

WALES

Principality of Gt. Brit., W. of Eng. with a long coastline on the Irish Sea and the St. George's and Bristol Channels. Off the N.W. coast, separated from the mainland by the Menai Strait is the Is. of Anglesey. The Cambrian Mts. cover most of the interior; they include Snowdon (3,560 ft.), the highest point in Eng. and Wales; Plynlimmon (2,468 ft.); Cader Idris (2,927 ft.); Brecon Beacon, and the Black Mts. The rivers Severn and Wye rise on the slopes of Plynlimmon and flow N.E. and S.E. respectively, crossing the border into Eng. The shorter ones—Dee, Conway, Doyey, Teify, Towy, Taff, Ogmore and others—are wholly Welsh. Much of the country is agricultural. Sheep are reared in the hilly districts; cattle are reared in the lowlands, where cereals and root crops are grown. There is an extensive coalfield in the S. in Glamorgan, around which a great industrial area has developed. The more important mining centres are Rhondda, Merthyr-Tydfil, Pontypridd, Abertillery and Maesteg. Iron and steel, chemical and tinplate industries have grown up in Swansea, Llanchwyr, Port Talbot and Tredegar. The tourist industry is of great importance in the N. Cardiff is the cap.; Llandudno, Rhyl, and Colwyn Bay, are seaside resorts on the N. coast. Fishguard and Holyhead are connected by steamer with Ireland. The earliest recorded inhabitants of Wales were Celts; they were subdued by the Romans, and Normans, but not completely, and lived in their own way under their own princes for many cents., carrying on constant war with Eng. In the time of Edward I Wales was really conquered by Eng., and an Eng. prince was made Prince of Wales. By the Act of Union (1536) Eng. law was made current in Wales, and Welsh representatives were admitted to Parl. Wales now sends 36 members to Parl. The Welsh have a language and lit. of their own. In the 18th cent. there was a considerable revival of national feeling. Welsh is taught in the schools. This nat. feeling has been kept alive by the Eisteddfod which has been held annually for at least 800 years. The Eng. Ch. was for long establd. in Wales, but in the 18th and 19th cents. the majority of the people became Nonconformists. The Univ. of Wales, founded in 1893, consists of coll. at Aberystwyth, Bangor, Cardiff and Swansea. Monmouth, although nominally part of Eng. is generally included in Wales for admin. purposes. Area (including Mon.); 8,000 sq.m. Pop. 2,641,000.

WAPITI

Deer (*Cervus canadensis*) found in N. Amer. It is larger than the red deer and has very fine antlers. The hide makes excellent leather.

WAR OF 1812

War between Gt. Brit. and the U.S.A. The war, declared by Congress, was caused by the rigorous exercise on the part of Brit. of her rights of search over neutral (in this case Amer.) vessels. In 1814 a Brit. force under Ross captured Washington and burnt the White House, but a 2nd contingent under Pakenham was repulsed at New Orleans in 1815, by Andrew Jackson, with great loss.

WAR, First World

(1914-18) Internat. struggle which raged over nearly all the Old World between Aug. 1914 and Nov. 1918. It began with Austria's attack on Serbia in July 1914, following the murder of the Archduke Francis Ferdinand at Sarajevo. Russia came to the help of Serbia, and Germany to that of Austria. War was then declared on Fr. as Russia's ally and the invasion of Belg. involved Brit. Germany and Austria, a little later, secured the aid of Turkey and then of Bulgaria. Fr., Russ. and Brit., the strongest member of the group called the Allies, with Belg. and Serbia on their side, were joined by Japan and Italy in 1915, and by Rumania in 1916. The last to join the group was the U.S.A. in April, 1917. The main theatres of war were in Europe where, on the W. Front, Fr. and Brit. confronted Germany, while on the E. Front Austria and Germany confronted Russia. The operations on the Ital. frontiers may be regarded as an extension of the W. Front, and those in the Balkans as an extension of the E. one. The Turkish Empire afforded 2 other theatres, the Gallipoli Peninsula and Mesopotamia. Second in importance only to the struggle on the W. Front was the command of the sea by the Brit. and Allied fleets. The German fleet was penned in its harbours although raiding cruisers in the outer seas caused havoc to allied shipping until they were rounded up and destroyed. German ports were successfully blockaded, but the German fleet was not destroyed. It remained being even after the indecisive Battle of Jutland, and this had an important bearing on the course of the war. The German submarine campaign against Allied shipping caused serious losses, esp. in 1916-17, only narrowly failing to achieve its purpose. In 1914 the Germans nearly reached Paris, and the Russ. invaded E. Prussia and Austria, but both advances were driven back. The chief engagements were on the Marne and the Aisne in the

W. and at Tannenberg in the E. In the W. 1915 was a year of trench warfare, from the Belg. coast to Switzerland. Attacks were made by the Brit. at Neuve Chapelle and Loos, while the Germans attacked at Ypres. The Brit. attacked the Turks on the Gallipoli Peninsula, but withdrew before the end of the year. The Russ. were driven back, and Poland was overrun. Events of 1916 included the costly Battle of the Somme, the desperate fighting between the Fr. and Germans for the possession of Verdun, and the German conquest of Rumania. Russia was weakening, Italy was making no progress, and the Brit. suffered a serious reverse in Mesopotamia. On land the stalemate seemed complete when 1917 opened. The fierce and costly fighting in the W. led to no definite result. The year's main events were the entry into the war of the U.S.A. and the collapse of Russia, who made peace with Germany at Brest Litovsk early in 1918. After the Ital. defeat at Caporetto, Brit. and Fr. troops were sent to that country. The Brit. regained the upper hand in Mesopotamia, and Allenby entered upon his successful campaign in Palestine. Early in 1918 a last German offensive gained ground against Brit. forces at St. Quentin and the Fr. were driven back on Paris as in 1914; but with Amer. armies in the field a marked change was soon seen. The Allies drove the Germans from the ground they had held for years in Fr. and Belgium. The Ital. defeated the Austrians, the Turkish armies were routed everywhere, and the advances from Salonika crushed the Bulgarians. The enemy one by one called for an armistice, and fighting ended with that granted to Germany on Nov. 11, 1918. Terms of peace were arranged in Paris and embodied in the Treaty of Versailles (q.v.).

WAR, Second World (1939-45) Internat. conflict involving most countries in the world. The first move by the Fascist powers in Europe was the open re-creation of the German army in 1935. Italy overpowered Ethiopia (1935-6) and both Germany and Italy sent forces to assist the rebels in Spain. Japan, engaged in conflict with China since 1931, drew towards a partnership with the Rome-Berlin Axis, later formalised in the Pact of Berlin (Sept. 1940). Hitler (q.v.) sent his troops to occupy Austria in Mar. 1938, and in the summer threatened Czechoslovakia. Brit. and Fr. reacted with ultimate 'appeasement' in the Munich Pact (Sept. 1938). In the spring of 1939, Germany absorbed Bohemia and Moravia, and Italy invaded Albania. Brit. and Fr. then began to prepare an 'anti-aggression front'. In the summer Germany threatened Poland and signed a non-aggression pact with Russia (Aug. 1939). Poland was attacked on Sept. 1, and 2 days later Brit. and Fr. declared war on Germany. The German air and land 'Blitzkrieg' soon overpowered Poland, Russia defeated Finland (1939-40) and meanwhile, during a winter of inactivity, the Brit. and Fr., behind the Maginot Line, faced the fortified German Siegfried Line. In April, 1940, Germany made a surprise attack on Denmark and Norway: the former offered no resistance and Norway was overpowered by June. Meanwhile, German forces had (May 10) overrun Luxembourg, invaded Holland and Belg. and penetrated into Fr. at Sedan. German columns moved to the Channel, cut off Flanders, and the Allies were evacuated from Dunkirk (q.v.). The battle of Fr. ended on June 22, with the Fr. surrender. Gt. Brit. remained the only Allied power, attacked by Italy in N. Africa (see NORTH AFRICA, CAMPAIGNS IN) and by German air bombardment at home. The Brit. Is. withstood the air attack, winning the Battle of Brit. (began July 1940) causing the abandonment of Hitler's plan to invade Brit. and the war in Africa was unde-

cided. In Oct. 1940, Italy invaded Gr. In the spring of 1941 Germany rapidly conquered Yugoslavia and Gr. and seized Crete. Brit. began to receive Amer. lend-lease aid and she was joined by a new ally when Hitler invaded Russia. German advances on Moscow and Leningrad were stopped in Dec. 1941, and a drive to the Caucasus was halted at Stalingrad. The Jap. attack on the U.S. fleet at Pearl Harbour occurred also in Dec. and the U.S. declared war on Japan. Extensive operations in the Pacific followed, involving Brit. and Amer. forces. In Oct. 1942, the Brit. victory at El Alamein (q.v.) was the turn of the African fighting and on Nov. 7-8, 1942, Amer. forces, at war since Pearl Harbour (q.v.), invaded N. Africa. While fighting was still going on there an entire German army surrendered at Stalingrad. Victory in Tunisia (May 12, 1943), the invasion of Italy, the capture of Sardinia, and Corsica caused the surrender of the Ital. The Allies, who had signed the U.N. Declaration (Jan. 1, 1942), were drawn more closely together by the Moscow Conference, the Cairo Conference, and the Teheran Conference. Aug. 1942, Amer. bombers raided airfields in Holland and later joined in attacks on targets in Germany as well as occupied countries. An invasion of Normandy was begun on June 6, 1944 ('D-Day'). Hard-won battles at Cassino and Anzio furthered the campaign against the Germans in Italy and Rome fell, June 4, 1944. WHALE

Marine mammal of the order Cetacea. They comprise 3 groups: (1) *Archaeoceti*. Their teeth consist of three incisors, 1 canine, 4 pre-molars and 3-2 molars on either side of each jaw. (2) *Mystacoceti*, or Whalebone whales in which the mouth contains fine plate-like structures supported by the palate in place of teeth, and (3) *Odontoceti*, or Toothed Whales, which in-

clude sperm whales, dolphins and porpoises. The most prized species is the Blue whale, the largest of all animals, which is found chiefly in the Antarctic Ocean. It reaches a length of 100 ft. and a wt. of at least 120 t. Blue, Fin, and Humpback whales enter the Antarctic in summer and feed on vast shoals of an oceanic shrimp some 2½ in. long. In winter they frequent the warmer latitudes to breed. The Sperm Whale is the largest toothed whale. It attains a length of 60 ft. Fin and Humpback whales may reach lengths of 65 and 50 ft. respectively. Whales are warm blooded, breathe air and have lungs. They conserve body heat by immense layers of blubber from which whale oil is produced. The bulk of this is processed into margarine, but there are many useful by-products, e.g. frozen whalemeat, meat meal, meat extracts, bone meal, liver oil and vitamin extracts. Whales bear their young like land mammals. Statistics on the whaling industry are compiled annually by the Norwegian Committee for Whaling Statistics. After World War II, the Internat. Whaling Commission was formed. The major field for whaling is the Antarctic. There are comprehensive regulations for whaling in all parts of the world. Early whaling was carried out by means of harpoons flung by men in small boats. Now a gun is employed which fires a harpoon with an explosive head. The gun is mounted in the bows of a fast whale catcher sent out either from a shore-based factory or, as one of a team, based on a large ocean-going whale factory ship with a crew of 400.
